After long weeks of travel, I find myself again in Bayreuth. A second visit to such a place, after a long absence, is something of a test to the visitor. The glamour and novelty of the unique scheme which Wagner carried through so triumphantly, at first works intoxicatingly on the novice. Almost everything he sees, at least during the period of the Festspiele, has something to do with Wagner. Shop-windows are filled with souvenirs of his music-dramas—illustrated post-cards, photographs and engravings of the master himself and his most noted interpreters. Wagner biographies and criticisms, the scales of his works, facsimiles of the cup of the Holy Grail and the swan of "Lohengrin" and "Parsifal." Then, as the hour of performance approaches, the general movement towards the rather ungainly brick structure of the Festspielhaus, which crowns the hill a half mile or so to the north of the town. Some enter; others stand without and gaze enviously at those who are fortunate enough to possess the open sesame which admits them for a few hours into another world. For this is what Bayreuth means, or should mean, to the musicians. Not that this ideal is always achieved—imperfection in form and substance not unfrequently brings one back to the every-day world. Still, a music-drama when heard here at its best—and that means an adequate performance of "Parsifal"—does transport the hearer to a new world, one in which the sensations of sight and hearing are blended in such subtle measure, that he finds it difficult to distinguish which exercises the greater effect. The obscurity of the audience-room, the solemn hush of the listeners, the absence of all visible mechanism as regards conductor and orchestra, the rapt earnestness of the singers, apparently unconscious of auditors—all this works powerfully on the mind and imagination. "Parsifal," with its semi-sacred character, is obviously incongruous with the customary surroundings of the modern opera house. It should either never be taken from Bayreuth, or only to theatres modeled after the original Festspielhaus. Any attempt to adapt it to ordinary conditions can only end by vulgarizing it. Nothing succeeds like success. Bayreuth is now one of the sights of Europe. Traveling agencies advertise tickets to the Festspiele among the regulation attractions of foreign travel. Many a tourist with as little comprehension of Wagner as an oyster has of Beethoven, comes to Bayreuth, gazes with open mouth at "Parsifal," and departs, proud in the consciousness of having "done" Bayreuth. With all the inevitable cheapening of the place and its many attendant disadvantages, this popularization demonstrates the force of the idea to which this vogue is due, though the man who gave it birth has lain for many years under the ivy-entwined slab in the shadow of the Villa Wahnfried. Unfortunately, the slimy trail of the speculator encircles Bayreuth. My trip was hastily arranged, only two weeks before sailing. I wrote at once to the Festspiele agency in New York to secure tickets for each one of the series, which includes "Parsifal," "The Flying Dutchman," and "The Ring of the Nibelung." I was fortunate enough to get them for the first two, but was told that the two cycles of "The Ring" had been completely sold out as early as last January. Here, however, they are hawked about at absurdly high figures, ranging from forty to fifty dollars for the series of four, the original price being twenty dollars. Considering that I hear "The Ring" every Winter in Philadelphia, with practically the same or better singers, I politely declined the invitation to purchase four tickets for fifty dollars, and to-morrow's performance of "Rheingold" will probably find me on my way to the classic regions of North Germany—Weimar, Eisenach, Erfurt, etc. Frau Cosima Wagner, herself, is not above resorting to means, which if adopted in America would be characterized here as exemplifying Yankee sharpness. In commemoration of the twenty-fifth anniversary of the opening of the Festspielhaus, she decided to bring out "The Flying Dutchman," the only one of her husband's works—without reckoning, of course, his first two or three immature operas—which had not been given here. She was shrewd enough to see that this, the weakest work of Wagner's which still holds the stage, would not prove strong enough to draw large audiences. "Parsifal," however, which can only be heard in Bayreuth, never fails to attract, so she conceived the canny scheme of linking each of the five performances of "The Flying Dutchman" with one of "Parsifal;" a ticket for one was not sold without a ticket for the other. Grumble as the purchaser might, it was Frau Cosima's will, and thus good houses were secured for the inferior work. Apropos of this, a little jest made the rounds some time ago: A great success had been achieved at the Munich opera by Mozart's charming comic opera, 'Così fan tutte'—literally translated—"So do they all." Here they say: "Cosima fa tutto," *i. e.*, "Cosima does everything." Yesterday's performance of "The Flying Dutchman" proved the practical wisdom of her scheme. On its merits alone, it would undoubtedly, have failed to fill the house. From a pictorial standpoint it was a great success. The flying clouds, the rolling surf, the rocking ships, the masterly management of lights, the final apotheosis of the distracted lovers—all was thoroughly admirable—but one does not travel to Bayreuth to look at a panorama. Perhaps the noble strains of "Parsifal," heard the day before, made the music seem more turgid and forced at times by mere contrast. If it had been given first, the hearer could have appreciated to better advantage some of its really fine points. Another disturbing factor was the ill-judged plan of giving the whole opera in one act without intermissions. The curtain went down at the end of each act for a few minutes in order to give time for the necessary change of scene; but the music was continuous, and the audience was kept in darkness without an opportunity of stirring from their seats, from five o'clock until half-past seven. This arrangement is said to have been indicated by Wagner himself, from certain notes found among his papers after his death, but it is too trying to body and nerves to be perpetuated. "Rheingold," to be sure, is given in the same way, but its length is not so great, and then the music is infinitely more interesting. It robs one of one of the most characteristic features of Bayreuth life—the escape between acts from the close atmosphere of the theatre to the fresh air and delightful surroundings of the Festspielhaus. It may be that "Cosima fa tutto," but when the public finds that Wagner's music dramas can be heard elsewhere in equal, if not greater, perfection, and under less restricted conditions Bayreuth will lose the first place. Immediately after the end of the season here, August 20, the Munich opera begins a series of special representations of such Wagner operas as have not been given in Bayreuth: "Die Meistersinger," "Tristan and Isolde," "Lohengrin," "Tannhäuser," with the avowed aim of competing with Bayreuth in all respects; singers, orchestra, stage-setting and prices. Hardly four decades ago Munich would have none of Wagner; he had been fairly driven from the city and forced to live in Switzerland; his project of an especial theatre for his music-dramas was hooted at; the idea of building it in Munich was intolerable and not to be borne. Now no city is so eager to do him honor; no Elisha was ever more anxious to catch the mantle of Elijah. The Dutchman, on this occasion, was sung by Herr Bertram, well-known in America as a baritone of ability. He acted well—at least, as well as such a part could be acted; it is hard to imagine anyone caring a rap whether such a gloomy, morbid creature succeeds or not in finding a woman who is faithful enough to rescue him from his tempestuous life on the ocean wave. He was plainly not in his accustomed good voice; his lower tones were grating and the upper tones not always true to pitch. Fräulen Despinn sang Senta with a fresh, charming voice, but showed little appreciation of the depth and mystic fervor of the Norwegian girl. Ernst Kraus, also well-known to American audiences, was the Erik, and sang in a thoroughly satisfactory manner a rather insignificant part. The men's choruses were finely given; those of the women left something to be desired as regards quality of tone and precision of ensemble. The opera was directed by Felix Mottl, who also directed "Parsifal" the day before. The sunken orchestra aided greatly in overcoming the somewhat blatant character of the orchestration, which in our theatres is often too overpowering for singers and audiences alike. Thus the storm music was really music, albeit stormy withal, and the singers could be heard even in the most tempestuous passages. As a whole, it was what would be called a good performance in an ordinary theatre, but judged by Bayreuth standards it was hardly more than mediocre. But after all, it is by "Parsifal" that Bayreuth must stand or fall. During its all but twenty years of existence this swan song of Wagner's has never been heard elsewhere. It is here that the traditions of performance, originated by the master himself, have crystallized into an authoritative interpretation handed down from one artist to the other in a sort of apostolic succession. It is uncertain whether Wagner ever felt that in some of his previous music dramas he had gone too far in throwing aside all choral and concerted music as inconsistent with dramatic sincerity. He never expressed himself openly to that effect, but one cannot help feeling that in "Parsifal" he tacitly admitted that it was an error, since some of the noblest passages are those given to choruses of the knights of the Grail. As regards stage effects, the management of the light was of itself a symphony to the eye. Anything more exquisite than the gradual growing out of the darkness of the temple of the Holy Grail with its scarlet and grey robed knights, its processions of youths and children, can hardly be imagined. As "Persival," Van Dyck, the Belgian tenor, showed the same dramatic excellence and fervor of action, as well as the same vocal defects which characterized his singing of the part when I heard him nine years ago. The part, however, is so declamatory and calls for so little sustained vocal style that his faults in tone production militated but slightly against the deep effect which he produced by his impassioned acting of the simple child of nature roused to manhood by temptation and suffering. The trying part of Kundry was splendidly sung by Frau Wittich of Dresden. She was hardly so satisfactory in the dramatic requirements of the role as Frau Malten, whom I had heard sing it on the former occasion. Neither was the charming chorus of flower maidens in the second act done so well as then. This time there was a larger number, but some of the voices were unpleasant in quality and the scene lost largely in seductiveness of effect. Until his death a year or two ago, this scene had been under the charge of Herr Porges of Munich, who took especial pains to secure beauty of tone and grace of action. To hear Parsifal under suitable conditions is an art-education in itself. There are many questions which press for consideration in this connection, but my letter is already too long and must come to a close. Possibly another may come which shall tell of various other musical happenings not without interest to the readers of THE MUSICIAN. I heard some opera in Italy and two of the Mozart cycles in Munich; "Figaro" and "Così fan tutte"—the latter the most delightful thing of the kind I have ever heard.

FREDERIC S. LAW.

PUBLISHER'S COLUMN.

The music supplement of this number contains eight pieces, retailing in sheet form at from 20 cents to 50 cents each—amounting to a total of $2.50. Following are the eight pieces referred to above:

Mercedes—Spanish Caprice. H. Engelmann. Op. 490.
Splendid solo, full of strength, beauty and characteristic grace.

Spring's Awakening—Polka Brillante. W. Peacock.
An extremely showy and pleasing composition.

At Trianon—Song. A. Holmès.
Vocal minuet of quaint and delicate beauty—both in melody and sentiment.

Rosebuds Mazurka—Four Hands. A. Sartorio. Op. 363, No. 4.
In the Key of A, and the compass of the primo does not extend beyond five notes.

Bessie's Schottische. O. R. Blum.
As a first grade study of accidentals, this will be found very valuable.

The Little Dustman—Song. J. Brahms.
There are innumerable slumber songs, but none are more attractive than this gem.

The Little Drummer—March. G. Horváth.
Pleasing example of dotted notes, and a very useful second grade piece.

Short Service Prelude for the Orgon, No. 5. W. H. Clarke.
For a description, see Organ Department of this number.

Each number of THE MUSICIAN contains at least twenty-four pages of music, the average cost of which—in sheet form—is about $2.50. As it is our desire to include those compositions which will prove most useful, we solicit and hope to receive the opinions of our readers in reference to selections for future numbers.

***

The September MUSICIAN, as befits the time of issue, is especially strong in practical hints on teaching and study. "Legatissimo," by Herve D. Wilkins; "Some Piano Tricks," by T. L. Rickaby; The Study of a Sonata, by H. G. Hanchett; Common Sense Training, by George Lehmann, are worth careful reading and will be beneficial. These are interspersed with lighter articles, and several very instructive reprints from other journals serve to give an idea of what is being written about. This issue of THE MUSICIAN fully upholds its reputation as a journal of broad and diversified musicianship.

***

New Publications. In the advertising pages of this issue we describe several new books; also a number of sets of teaching pieces. All are valuable additions to our catalogue, and will be appreciated by teachers. You run no risk in ordering a sample copy of any new book of our publication, because we refund the money if it proves unsatisfactory.

***

The Musician's Premium List. This list, made up of musical works and articles needed by all musicians—students as well as teachers—offers some remarkable inducements. With but little effort, each of our subscribers can secure one or more new subscriptions, and we offer liberal premiums for any interest they may take in extending the circulation of this journal. Send for the list, and build up a library of choice musical works without the expenditure of any money.

***

If you are not satisfied with the way in which your orders have been filled by other dealers, why not give us a trial, and test our ability? Our facilities for promptly filling all orders are unequalled by any house in America. We carry a complete line of all foreign and American publications. We are large publishers—are rapidly building up a catalogue of sheet music and music books that cannot fail to interest teachers, because each subject has been selected on account of its teaching value.

***

Before deciding on your dealer for the present season's supplies, write for our new catalogues and best discounts. Compare the latter with those offered by others; note the liberal conditions under which we send selections of music "on sale"—see page 292. They will interest you. During the Summer months we prepared many new and excellent subjects, and our selections will contain a splendid variety of all grades. Write for further particulars. Glad to hear from you.

***

Readers of THE MUSICIAN who desire to keep posted upon all new publications of merit, should carefully read the advertising columns of THE MUSICIAN, from which they can secure much valuable information. Any of these publications can be procured through us at the least possible cost.

Attention is called to our Special Offer to send Music On Sale to Schools and Teachers. Full particulars will be found on page 292 of this issue. Our success in obtaining and holding the school and teacher trade is based upon the fact that in making selections we use only such music as will prove useful. We do not follow the plan, adopted by so many dealers, of taking the first assortment that comes to hand, regardless of the special needs of the customer. When you patronize us you can depend upon receiving music selected by experts, and selected with the special object of supplying just what is wanted. Only the latest and best publications are used in making these selections, insuring a nicely balanced and well contrasted supply. If you have never tested our ability in this line, *give us a trial.* So that we may have full particulars regarding the kind of music which will prove most useful, carefully fill out the blank application which will be found on page 292. At the same time give us an idea regarding the quantity desired—the value measured by retail prices. Attention to these details will enable us not only to supply the proper material, but also the approximate amount of music desired.

It is desirable that orders for On Sale Music should be received early in the season. Selections can be made to much better advantage when we are not crowded with orders. Shipments will be timed so that packages may reach destination when the music is needed.

***

Manchester's Music Tablet. Designed to supply teachers and pupils with a convenient pad of ruled music paper, and containing practical suggestions to meet the every day needs of both, Manchester's is the best tablet that has ever been offered. Under the circumstances, it is not surprising that its sale is greater than the combined sale of all other tablets in the market. If you haven't seen Manchester's, send for a sample. It will please you and your pupils, too. Each tablet contains 100 leaves, ruled 12 staves to the page. Only 20 cents.

***

TO COLLEGES, SCHOOLS AND TEACHERS.

Now is the time to decide WHERE to place orders for the coming season's supplies.

As we are deeply interested in this matter, we desire to call attention to a few of the reasons why we can make it advantageous and profitable for you to send us your orders.

1. We Make a Specialty of College, School and Teacher Trade.
2. Our Discounts Are More Liberal than those offered by any other house.
3. Our Facilities are Unequalled.
4. All Orders Are Filled by Experts. We pride ourselves on promptness and correctness, two important things for your consideration.
5. Our Own Publications Are Noted for Accuracy and Mechanical Excellence.
6. Our Plan of Sending Music On Sale (for full particulars, see page 292) is Liberal, and only the latest and best music is used for this purpose.
7. We Carry a Complete Line of All Foreign and American Publications.
8. Accounts Opened with Responsible Parties.

Before selecting a dealer, write us for catalogues, discounts and full particulars. If you are not familiar with our publications, allow us to send you a package of music ON SALE. Our selection will convince you that we are progressive and up to-date.

We solicit your trade, and are positive that we can save you both time and money.

***

Are You Certain that you are buying your music at as good rates of discount as your fellow teachers? If not, you are doing business at a *disadvantage. We claim* that the discounts we allow teachers are MUCH BETTER than offered by other dealers, and unless you have had our latest quotations, you *cannot* be sure that you are not paying *more* for your supplies. This applies not only to our own publications, but to ALL the music you use. On our own publications we offer such liberal discounts (which will be supplied on request) that, no matter how far distant you are, or the cost of Postage or Express, we GUARANTEE you a saving when purchasing from us. In this connection you should remember that we send liberal selections of the latest and most desirable music "ON SALE," with the privilege of returning and having credited, at the end of the teaching season, all that has not been sold or used. Full particulars regarding this department of our business may be had on request. We also offer numerous additional advantages which it is impossible to mention in the limited space of this page. *Write us!* No trouble to answer your letters and inquiries. It will pay you to correspond with a house that is progressive and up-to-date in all of its dealings. We can save you time, trouble and money. We suggest that you give us an opportunity to demonstrate this fact by sending us a trial order; it will surely bring us your steady patronage.

SOME THINGS OUR READERS SHOULD KNOW AND REMEMBER:

That We Handle and Supply Anything in Music.

That We Are Large Publishers of sheet music—vocal and instrumental—all of which are listed and fully described in our Catalogue—free to any address.

That We Publish many valuable books, in addition to the seventy-three numbers of the **"Hatch Edition,"** listed on page 2 of cover; all are fully described in our Catalogue.

That Our Publications Are Noted For Correctness and Beauty.

That We Carry a Complete Line of All Foreing and American Publications.

That We Supply all Music mentioned in the articles appearing in THE MUSICIAN; all music included in the lists of Desirable Choir Music; all publications mentioned in the advertising columns of THE MUSICIAN.

That we send liberal selections of the latest and most desirable music "ON SALE," with the privilege of returning and having credited, at the end of the teaching season, all which has not been sold or used.

That Our Facilities For Promptly Filling All Orders Are Unequalled.

That All Music is Supplied Teachers at More Liberal Discounts than those offered by any other house.

That You Should Have Our Catalogues and Professional Discounts, both of which will be sent upon request. They will interest you.

***

If in need of a Metronome, one that will give entire satisfaction (all others are worthless) and last a lifetime, send your order to the Hatch Music Co. Owing to the increased cost of manufacturing Metronomes, prices have been advanced by nearly all dealers. We still offer them at the old prices—another proof of our claim that you save money by purchasing from us. We handle only the best makes, and guarantee every instrument for two years. All complaints receive careful attention and prompt adjustment. Our prices ($2.50 and $3.50) are very low, and we offer an extra discount on orders for six or more instruments.

***

The publishers of THE MUSICIAN have exceptional facilities for printing sheet music and music books. Upon receipt of manuscript, with full particulars concerning the style of publication desired, we will submit complete estimate.

***

THE MUSICIAN *wants to keep in close touch* with teachers and schools in all sections, and the editor believes that space devoted to reports of concerts, recitals, lectures on musical subjects and musical events of general interest would prove interesting to readers. You can aid him in making an interesting feature of this department by sending reports of musical happenings that will interest your fellow teachers in other localities.

***

Agents Wanted.—THE MUSICIAN wants good, live representatives to solicit subscriptions. Those having a knowledge of music preferred. Full particulars, including sample copies, order blanks, other helps and terms, will be sent to all who desire to make a trial of this work. No other field of subscription work offers such liberal inducements.

***

A Revised and Enlarged Edition
—OF THE—
NATIONAL GRADED COURSE.

While the editors of this Standard Graded Course have always been confident of its superiority, and confident that it has been, since the issue of the first edition, the best and most practical graded school—superior in every respect to any similar publication—they have periodically revised the work so as to keep it right-up-to-date. Whenever a teacher suggests a change, the suggestion is given careful consideration, and if it will strengthen the work in any respect, it is very cheerfully accepted and adopted. Neither care nor expense has been spared to make it perfect.

During the summer, the editors have gone over the entire work, and new editions of Grades I–IV are now ready. The new editions of Grades V–VII will follow shortly. We desire to call especial attention to the new edition of Grade I. In order to include additional valuable matter, and to make the progression perfectly smooth and natural, it was found necessary to enlarge this number, which now contains fifty-four pages. We believe that it is, in every respect, a *perfect* work—that it is the best elementary work published. It merits the careful consideration of every earnest teacher who is desirous of using the BEST.

We invite examination and critical comparison, and will cheerfully send Grade I, or the entire Course—seven grades—subject to approval. We are willing to assume all of the risk in order to have you test the merits of our claims, and of the Course.

A SELECTED LIST OF SECOND GRADE MUSIC AND BOOKS

SHEET MUSIC.

BAUMFELDER, F.

Op. 215 No. 19 Harlequin (Der Hanswurst) . 20
Very bright piece, well treated and clear in form. The little figure of sixteenth notes will attract. Good study in staccato.

BEAUMONT, P.

At the Twilight Hour 30
Of quite different character. A rather broad melody calls for a singing touch. The wide accompaniment in left hand will require care. Very pretty.

Spring's Delight 30
This must refer to the pleasant May days, for it is full of cheer and sunshine. Good for teaching and parlor playing.

Twinkling Stars 30
These stars twinkle very melodiously. A graceful melody without special difficulty characterizes this composition.

BEHR, F.

Song of the Elves (Elfengesang). Melodie . . 25
Graceful melody in $\frac{3}{4}$ measure. Affords excellent practice in passage work. Not hard and very pleasing.

BIEHL, A.

Op. 53, No. 3. Gretchen and Her Doll (Gretchen und ihre Puppe) 20
Another bright piece, full of tune and presenting no hard spots. Considerable staccato in both hands.

Rondo Militaire 35
A martial composition that will set the feet to marching. Needs spirit in its playing.

Op. 52, No. 18. Rope Dancer at the Fair (Die Seiltänzer auf dem Jahrmarkt) 20
An excellent finger study, with chords in left hand. Short and interesting.

BIELFELD, A.

Bygone Days. Menuet 20
The days that are passed are not remembered in sadness, for this is a cheery little dance in $\frac{3}{4}$ measure. Some good practice for left hand.

BOHM, C.

Little Pleasantries (Petite Plaisanterie) Morceau 35
Good teaching piece; pleasing melody and full of sprightliness.

BOLCK, O.

Op. 68, No. 5. Roguishness (Schabernack) . . 20
One would hardly look for roguishness to be expressed in the minor, but it is done—and well done—in this little piece. A nice staccato scale for left hand.

BURGMÜLLER, F.

Hunting Song (Kreutzer) 20
A good teaching piece, and pretty withal. Arrangement of a scene from the opera, "A Night in Granada."

DOLES, R.

Op. 10. Little Waltz (Une Petite Valse) . . . 20
A very excellent teaching piece. Contains opportunities for phrasing, finger and hand development. Well worth playing.

EILENBERG, R.

Op. 46, No. 3. Come to the Dance (Komm' zum Tanz) Schottische 20
This invitation to the dance is alluring. Bright in its subjects and full of "go," it is sure to please.

Op. 210, No. 1. With Drums and Colors Flying (Mit Trommeln und Fahnen). March . . . 30
Showy little march. Not difficult and responding well to careful practice.

ENGELMANN, H.

Op. 308, No. 1. Berceuse 20
A real bit of inspiration. A beautiful theme is interwoven between the two hands. A fine study in expressive playing.

Op. 430, No. 5. Jolly Parting. Scherzo 25
These people must have parted in good humor, for the scherzo is a gem. Lightness of touch and nimbleness of finger are needed. Results will be good.

Op. 430, No. 2. Out for a Day's Sport. Rondo 25
Excellent teaching piece. Full of all that attracts the young player, and can be made the means of material advancement.

FISCHER, O.

Op. 114, No. 2. At the Shooting Match 20
Good study in dotted eighth and sixteenth rhythm. Should move firmly and with well controlled arm.

GADE, N. W.

Op. 36, No. 4. Dance of the little Girls (Tanz der Kleinen Mädchen) 20
Well worth using. It is interesting and musically and pedagogically useful.

GAEL, H. van.

Op. 78. La Gracieuse. Valse 35
Deserves its name. It is a graceful waltz, easy to master, yet interesting to play.

Op. 83. Marche Guerrière 35
Stirring march. Good wrist study. Apart from its beauty, its rhythmic character is valuable.

GÄNSCHALS, C.

Op. 239. In the Mill (In der Mühle). Characteristic Piece 30
Very characteristic. Splendid for developing control of first finger (thumb). Light hand and finger staccato are needed.

Op. 29. Our Loved One (Unser Liebling) . . 30
A sentimental piece, calling for good melody playing. Very tuneful. Without octaves.

GEIBEL, A.

Good Morning. Scherzo 35
Good study in rhythm and staccato. Melody work in both hands. Full of brightness.

Good Night. Berceuse 35
A good-night song, nice to play. It is simple in construction, the theme being principally in double notes, with bass of single eighths.

GEIBEL, A,

Pleasant Summer. Melody 35
An excellent study in melody playing. Lovely little melody with simple accompaniment.

GURLITT, C.

Op. 101, No. 8. The Fair (Kirmess) 20
The spirit of the festival is in this piece. Excellent study.

The Vintage Festival 20
Requires loose wrist. A good study in wrist touch. Its modulations increase the difficulty somewhat, but do not mar its usefulness.

HEINS, C.

Op. 224 Cuckoo Clock (Die Schwarzwälder Uhr) Salon Polka 30
The runs in this call of the cuckoo will be good training. Light wrist and flexible fingers are essential.

Op. 181, No. 2 Spring Wanderings 30
Good march. Excellent practice, and effective when learned.

HELLER, S.

Petite Tarantelle 20
Thoroughly good teaching piece. Full of fire and animation, it is certain to advance the pupil's knowledge of and taste for good music.

HENNES, A.

Op. 369 No 5 Rough and Tumble (Wildfang) 30
While vigorous, the sport will do no one injury. Full of melody and spirit; a good teaching piece.

HILLER, P.

Op. 66, No. 7. The Happy Carpenter 20
Characteristic little piece, with the melody in the bass. Good study, and an attractive piece for the parlor.

HIRSCH, T.

Op. 44 On the Caroussel (Auf dem Caroussel) 35
A cheery piece, recalling summers at the shore, with the fun at the merry-go-round. Good practice, too.

HOLST, E.

Beach Promenade. March 30
Another seashore piece. A picture of the crowds on the board walk. It is a tuneful march presenting no difficulties.

Fresh Breezes. Waltz 30
A breezy waltz, easy, but pleasing and useful. Presents a great variety of melodic themes.

Restless Waves. Tarantella 30
The restless sway of the waters is well pictured in the never-ceasing movement of this composition. Worth study.

JOHN, F.

Op. 251, No. 3. Gipsies Are Coming 20
The wierdness of the gipsy is in this. Should be played quickly and with lightness. Good practice in left hand skips.

KAISER, P.

Op. 2, No. 3. Schottische 25
Graceful dance, full of melody. Not difficult. One of a set of five easy dances entitled "The Children's Ball."

Op 2, No. 4 Waltz 25
A nice waltz containing some good practice in run playing. Another selection from the same set.

KRENTZLIN, R.

Op 4 Army and Navy March 35
An attractive march, presenting no special difficulties. Inspiring and brilliant.

KULLAK, T.

Op. 81, No. 8. The Nightingale in the Wood (Die Nachtigall im Busch) 20
The trill of the bird is heard right at the beginning. A light touch is necessary. Sure to please the young player.

LIADOW, A.

Op. 26. Petite Valse 20
Thoroughly satisfying waltz. Tho' short, it grows in interest to the end.

LICHNER, H.

Lords and Ladies. Minuet 30
A graceful minuet, worth playing. Stately movement can be well brought out.

Thoughtfulness Reverie 20
Simple melody for right hand, with broken chord accompaniment for the left. Requires a good singing tone.

MERKEL, G.

Op. 31, No. 2. Merry Huntsman (Fröhlicher Jägersmann) 20
Typical hunting song, well written and brilliant. Attractively harmonized.

MUTTER, C. F.

Jolly Guardsmen March 35
Brilliant and stirring. Excellent for thirds and octaves.

NÜRNBERG, H.

Dancing in the Meadows 20
Meadows gay with flowers and children full of joy are apparent in this lively little piece.

OESTEN, T.

Op 202, No. 4. Doll's Dream 35
A piece of descriptive music. Contains a cradle song, the dream, and a dance.

ROHDE, E.

Op. 50, No. 1. Boating Song. Barcarolle . . 30
Characteristic barcarolle. Wide accompaniment in left hand calls for careful treatment. Flows smoothly and is very pleasing.

SARTORIO, A.

Op 229 No. 17. Free as Air (Leichtes Element) 20
Moves with the freedom its title indicates. A light hand, and a firm finger and hand touch will bring out its best effects.

Op 229, No 9 Off to the Chase (Auf zur Jagd) 30
Another piece of musical description. A cheery 6-8 movement, and a real hunting song.

Op 229, No 10 Torch Dance (Fackeltanz) . . 30
Characteristic piece of much merit. Excellent practice in wrist touch and syncopation. Can be made very realistic.

SCHARWENKA, X.

Op. 62, No. 6. Gavotte 30
Splendid gavotte—musically and otherwise. Affords a fine opportunity for effective playing.

Op 62, No. 10. Scherzino 30
Somewhat easier than the preceding, but equally attractive.

SCHILD, T. F.

Always Gay (Immer Flott) March 30
An attractive march with no troublesome places. Brilliant and joyous composition.

SCHWANTZER, H.

Op. 25. Cuckoo in the Woods (Kuckuck im Walde) 20
A bird imitation which will please the young player, and instruct at the same time. Good exercise in passage work.

SCOTT, H.

Quiet Delight (Stillvergnügt) 35
A bright melody sure to please the pupil. Sprightly movement.

STREABBOG, L.

Columbine 20
An attractive piece presenting a good study of light, yet singing staccato Arms must be well controlled.

Harlequin 20
Useful and pleasing piece. Suggests tumbling of the clown.

THOMA, R.

Op. 61. A Little Ballad (Kleine Ballade). Tone Piece 30
Firm fingers, singing quality of tone and attention to expression are needed here. A beautiful piece.

TOURBIE, R.

Op. 207, No. 1. March 25
Good, stirring march, presenting no particular difficulties.

TSCHAIKOWSKY, P.

The Lark's Song. Descriplive Piece 20
Characteristic of the master who wrote it. It should be played with delicacy, purity of touch, and nicety of shading.

Op. 39, No. 8. Waltz 20
Well worth using. Healthy in sentiment, and thoroughly musical.

WANDELT, B.

Op. 12, No. 1. Doll's Waltz 30
Graceful and melodious. Excellent for phrasing study in simple forms.

Op. 8, No. 4. Heart Leaves 20
Well played, this will tell a heart story. An expressive melody which should be played with a pure singing tone.

WEISS, P.

Op. 19, No. 6. Evening Song (Abendlied) . . 20
Tender little song, calling for nice treatment.

WENZEL, H.

Bell in the Valley (Glöcklein im Thale) 30
A descriptive piece in which the chime of the bell is frequently heard. Presents no particular difficulty.

Brook in the Wood (Der Waldbach) 30
Brilliant tone piece in which the gurgle of the brook, as it rushes over the stones, is heard. Excellent practice.

Greeting to Appenzell (Erinnerung an Appenzell) 20
Tuneful and bright. Of no particular difficulty, and furnishes interesting practice of light chords.

WILLIAMS, F. A.

Op. 21, No. 1. Over the Waves. Barcarolle . 35
Beside being very pretty, this is a good study in wide accompaniment for the left hand.

WOLFF, B.

Op. 197, No. 2. A Dance in the Mountains (Auf dem Tanzboden im Gebirge) 30
A study in phrasing. Should be played with a bright, crisp touch. Very pleasing.

WOOLER, A.

Little Cavalier. March 35
Graceful little march, without heavy chords or great stretches.

ZIESE, L.

Sweet Hope. Melody 20
Characteristic melody requiring a singing finger touch. Can be made very pleasing.

BOOKS.

Bon Bons—An Album of Easy Pieces.
Géza Horváth. Op. 20 . . . . Paper Binding 50
An excellent collection for study of touch in the primary forms.

Children's Corner—Ten Easy Pieces.
E Hasse. Op. 52 . . . . . Paper Binding 50
Will prove extremely useful for pupils in the second grade.

Classic Piano Solos for Young People, Vol. 1.
Paper Binding 1 00

Classic Piano Solos for Young People, Vol. 2.
Paper Binding 1 00
Unequalled by any similar publications of corresponding grade.

Melodic Sketches . . . . . Paper Binding 50
Twenty-four characteristic pieces in the second grade. A splendid collection.

Miniature Pictures—Twenty-four Easy Little Pieces. Hugo Rheinhold. Op. 39 Paper Binding 60
Invaluable as an aid in the formation of correct taste and for the improvement of technic.

Modern Piano Solos for Young People.
Paper Binding 1 00
Magnificent collection of pieces adapted to the needs, tastes and capabilities of young players.

Rural Pictures—Twelve Easy, Melodious and Instructive Pieces. Wilhelm Fink. Op. 295. Paper Binding 60
A variety of styles, embracing all the primary forms of touch.

Streabbog's Twelve Etudes Melodiques. Op. 64	Paper Binding.	75
Revised, Fingered and Annotated by Wilson G. Smith.		

All works included in the "HATCH EDITION" are printed from new plates. The engraving, paper, printing and binding are superior in every respect—each the best of its class. Ask for the "HATCH EDITION," and take no other if you want the best.

WICHTL'S YOUNG VIOLINIST

A new and magnificent edition of Wichtl's celebrated violin school, including the original 100 progressive exercises in the first position, through all intervals and keys, with a second violin part for the teacher, to which we have added "Pleyel's Celebrated Duets for Two Violins"—carefully fingered and bowed—and a splendid collection of Popular Duets for Violin and Piano. Without exception ours is the best edition of this standard work. Compare it with others.

Half Cloth Binding. Price, $1.25.

Thirty Standard and Popular Operas

ARRANGED FOR VIOLIN AND PIANO

Violin and Piano, 200 Pages. By A. S. BOWMAN. **Violin, 64 Pages.**

In this superb collection the compiler has displayed taste of the most eclectic character, his selections comprising the various "schools" of music—French, German, Italian and English. In one compact volume, grand opera, opera *comique* and opera *bouffe* have contributed their choicest melodies. The list includes the great operatic successes of a generation ago and passes, in continuous order, to those of the present day; we have Rossini, Donizetti, Verdi, Wagner, Bizet and Mascagni, in close relation. In the arrangement that happy medium has been reached which presents just enough difficulty to interest the player without proving troublesome or overtaxing the powers of the average performer. Without exception, it is the most useful and entertaining work of its character in print.

"Thirty Standard and Popular Operas," for Violin and Piano, is a handsome volume of 200 pages, bound in half cloth. The same, for Violin, contains 64 pages and is neatly bound in paper. Both are printed from new plates, on a fine quality of music-book paper. No expense has been spared to make them perfect in every respect.

Violin and Piano, One Volume, Half Cloth Binding. Price, $1.25. Violin Alone, Paper Binding Price, 75 Cents. Both Books, if ordered at the same time, $1.50.

POPULAR SELECTIONS FOR MANDOLIN AND PIANO

By JOHN J. EBERHARDT.

Mr. Eberhardt, well known as a composer and arranger of music for the mandolin, and for mandolin clubs, is also leader of one of the most popular clubs in the United States. We have, therefore, no hesitation in recommending anything that he may offer in this particular line.

"Popular Selections" is a large book (9½ x 12 inches) of 128 pages, printed from engraved plates, on fine quality toned music-book paper; it has an attractive cover.

Paper Binding. Price, 50 Cents. If Sent by Mail, 11 Cents Additional.

THE CHILD'S MUSIC WORLD

Being Chapters About the Study of Music

By THOMAS TAPPER.

EXTRACT FROM PREFACE: "The purpose of this book is to serve as a suggestion to teachers who desire their students to become acquainted with the Story of Music. It is not the purpose to present names, dates and facts to be painfully memorized and easily forgotten. Experience teaches that the facts of history take place and interconnection in the mind very slowly; it also teaches that if general principles and tendencies are appreciated first, it is all the easier to put in the details afterwards. Learned in this way, history is less difficult and vastly more entertaining than it is when reduced to a categorical collection of questions about facts that seem isolated and well-nigh impossible to keep together.

"The principal points, then, are these: I. Implant early in life as many fundamental principles as possible. II. General principles first, details afterwards. III. Isolated facts have no value. IV. True education demands activity. *We know what we do.* The basis of all knowledge is personal experience. V. Hence, a teacher should create activities and direct them."

As a basis for talks on History by teacher to pupils, nothing can excel this volume.

Cloth Binding. Price, $1.25.

BURROWES' PIANOFORTE PRIMER

Latest Improved Edition

Revised and Modernized by THOS. A'BECKET.

The fundamental principles which have given the work a world-wide reputation were not disturbed in the revision, but as the method of instruction has improved more rapidly than any other portion of the musical art, the sole aim of the editor was directed to bringing it up to the requirements of a progressive age.

There are other editions of this work—a number of them—but none are equal to the Latest Improved Edition, although all are sold at the same price.

Half Cloth Binding. Price, 25 Cents.

BUSSLER'S PRACTICAL HARMONY

Newly Revised and Corrected Edition

Authorized Translation from the Third German Edition by N. GANS.

Without exception, the best and most practical work on this subject ever published. The author is a noted German theorist, whose works are known, used and held in high esteem at all the most prominent European colleges and conservatories. The demand for PRACTICAL HARMONY has been so great that three revised editions have been printed in Germany. Ours was translated from the third German edition, by a writer selected by the author. It is, as its title indicates, a thoroughly practical work, embracing the latest and most approved methods. It is simple, is illustrated by practical examples, and is eminently suited for a self-instructor. Its price brings it within the reach of all.

For class instruction or for self instruction, Bussler's Practical Harmony is unequalled. It makes the study of harmony easy, rapid and entertaining.

Cloth Binding. Price, $1.00.

DICTIONARY OF MUSICAL TERMS

100 Pages. By STAINER and BARRETT. 6 x 9 Ins.

Compressed from the Imperial 8vo Edition, by K. M. ROSS.

We take pleasure in presenting a compressed edition of Stainer and Barrett's valuable work. Mr. K. M. Ross, in his preface says: "In reducing this book from the author's larger work, we have endeavored to omit only such terms as are not in general use, but have been compelled to eliminate an amount of details, in order to keep within reasonable limits. To the general public it is hoped that this edition will be found of practical utility."

"Dictionary of Musical Terms" is a neat and attractive book. It is offered at a nominal price with the hope that it may prove of incalculable value to those in need of a handy reference book.

Paper Binding. Price, 25 Cents.

THE HARMONIZING OF MELODIES

A Text Book for Students and Teachers

By HENRY C. BANISTER.

The harmonizing of melodies, generally termed the knowledge of harmony, is one of the most practical applications of the knowledge of chords and their treatment. One may know the meaning of a number of words and still be unable to construct a sentence; he who lacks the ability to use chords in harmonizing a melody is in a similar position.

"Harmonizing of Melodies" will prove a most helpful aid to the student of harmony. It is extremely practical and abounds in examples which will readily be understood. No point has been overlooked, and all important subjects are treated at considerable length. Various methods of handling the same melody are shown, and valuable information as to the best choice, with reasons for the selection, are given. Many excellent hints as to taste and ornamentation, culled from the experience of the writer, are included.

Paper Binding. Price, 50 Cents.

JOUSSE'S MUSICAL CATECHISM

Latest Improved Edition

Revised and Modernized by THOS. A'BECKET.

No one questions the merit of Jousse's Catechism—it is a universal favorite; but the progressive teacher demands text books and studies of the most advanced character. He is not satisfied with original editions, but wants the latest and best ideas. The possession of up-to-date editions saves time and insures more rapid and more substantial progress.

There are other editions of this work—a number of them—but none are equal to the Latest Improved Edition, although all are sold at the same price.

Paper Binding. Price, 20 Cents. Half Cloth Binding. Price, 30 Cents.

Musical Memory and its Cultivation

Also an Investigation into the Forms of Memory Employed in Pianoforte Playing and a Theory as to the Relative Extent of the Employment of Such Forms

By FREDERICK G. SHINN, Mus. Doc., Dunelm.

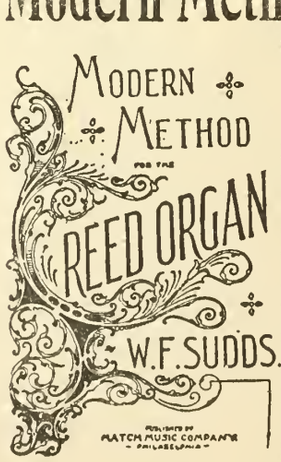
The purpose of the work is twofold: *First*, an inquiry into the various forms of memory employed in piano playing and the formation of a theory with regard to the relative extent of the employment of the various forms by different individuals; *Second*, to repeat, with the strongest possible emphasis, that Ear-training, which is largely a cultivation of the musical memory, is THE FACT of all musical education.

"MUSICAL MEMORY AND ITS CULTIVATION" is divided into two parts. *Part 1* contains seven chapters, as follows: General and Special Memory; Musical Memory; Musical Memory in Connection with Practical Execution; Muscular Memory; Visual Memory; Intellectual Memory; Relative Extent of the Employment of the Different Forms of Memory. *Part 2* contains six chapters, as follows: Necessity for the Cultivation of Musical Memory; General Conditions Favorable to Memorizing; Suggestions for a Scheme of Memory Training; Method of Studying Pieces for Memorization; Memory Training and Examination Schemes; Memories of Musicians.

A valuable work which should be read and studied by all musicians.

Paper Binding. Price, 50 Cents.

Modern Method for the Reed Organ



Embracing the Latest and Most Approved Systems Conducive to Rapid Progress and Artistic Interpretation; also Containing Various New and Important Features, such as Registration, Stop Nomenclature, Adaptation of Piano Music, etc., etc., Not to be Found in Any Other Work of the Kind

By W. F. SUDDS.

As the title implies, this method is modern, the newest ideas, and their practical application, governing its compilation. It treats all subjects in a terse and effective manner.

Among the many excellent features of the MODERN METHOD, we direct attention to the following:

It begins with **Dictated Lessons.**

The **Rudiments** are explained with remarkable clearness.

It is **Carefully Graded.**

It is sure to **Awaken the Musical Instincts** of the pupil without smothering the soul with too much drudgery.

The **Fingering** is the so-called **Foreign,** thus according with all the best class of modern musical publications for either Organ or Piano.

It contains a complete treatise on registration as applied to the modern Reed Organ; also full information and comparison in the matter of Stop Nomenclature.

It is the only work of the kind treating the subject of **Adapting Piano Music to the Reed Organ.**

Every variety of Touch is clearly set forth, accompanied by illustrations (drawn and engraved expressly for this work), showing the movements of fingers, hand and arm.

The Scales are introduced in an effective manner.

The Explanation of the Minor Mode, another subject seldom touched upon in works of this character, is such that it can be readily understood.

The Musical Illustrations attending the various principles are taken from the best composers, of whom short sketches are given. This introduces a desirable amount of musical history.

The aim is to teach and illustrate one thing at a time. By a judicious contrast of subjects, weariness is avoided.

Four Hand Pieces are introduced, not merely for recreation, but to promote steadiness and inspire confidence in the pupil. This plan has the approval of many great teachers.

A Copious and Carefully Compiled Pronouncing Dictionary—a matter of great importance to a work of this character—is included.

It is a work which cannot fail to interest both the practical teacher and the earnest pupil.

MODERN METHOD is the result of many years' experience as a teacher, by an editor who needs no introduction to the music publishing world. It is a book of 144 pages (10 x 13 inches), printed from entirely new plates and on the best grade of music-book paper.

Half Cloth Binding. Price, $1.00.

THE BURROWES MUSICAL KINDERGARTEN METHOD

INSTRUCTION FOR TEACHERS BY HOME STUDY

The many Music Teachers who have signified their desire to acquire this charming method in time for their September Openings are advised as follows:

1. Orders should be sent in as soon as possible.
2. The new, improved and enlarged edition of the Teachers' Manual is ready for distribution.
3. It is well for teachers to familiarize themselves with the method early so that they can spread its fame during July and August, and try and get some newspaper notices They will then be able to begin the autumn term with better prospects of great success.
4. Teachers may apply the Method to their summer classes, and thus obtain testimonials from parents, which will prove of great value in obtaining pupils for the autumn classes. Do not underestimate the value of an early beginning.

THE BURROWES METHOD was built up for children and from actual study of the needs, preferences, character, and even the whims of children. The authoress has taught a musical kindergarten for many years, during which she has composed songs, invented games, and constructed apparatus too numerous and varied to mention or describe; and of these only the most valuable have been retained. Everything that was dull, cumbersome, ineffective, or unchildlike has been abandoned, and what remains has been tested through and through, and its value proved beyond the shadow of a doubt. There is nothing in it that is not agreeable and entertaining. **IT IS NOT BUILT ON MERE THEORIES.** It is not the inspiration of a day. It is, on the contrary, the **CREAM OF FIVE YEARS OF SPECIAL EFFORT,** and the fruit of many other years of toil and study. The results speak for themselves.

MUSIC TEACHERS OF ALL GRADES should investigate this work. **ADVANCED TEACHERS** will profit largely by establishing kindergartens in charge of an assistant or partner, thus creating a preparatory department which will act as a feeder to the advanced classes. The advantages of the Method to **YOUNG TEACHERS** are obvious.

All Teachers who have not seen the Art Souvenir Booklet (mailed Free to Teachers) should send their addresses at once.

KATHARINE BURROWES, A 1302 PRESBYTERIAN BUILDING, FIFTH AVENUE, NEW YORK.
WESTERN ADDRESS, 618 SECOND AVENUE, DETROIT. MICH.

Fletcher Music Method

(SIMPLEX AND KINDERGARTEN)

The aim of the Method is to eliminate the drudgery of the study of music and to give a fundamental, systematic and logical musical education in a thorough, natural and pleasurable way; and so make it possible for Music to exercise her three-fold power of development. The System was originated by Evelyn Ashton Fletcher, and the following are a few of the many endorsers and a partial list of the Conservatories in which the System has been adopted.

Dr. Wm. Mason, New York.
Mrs. John Vance Cheney.
Madame Hopekirk.
Philip Sousa.
Franklin Taylor.
Dr. Gerrit Smith, New York.
Wm. Tomlins, Chicago.
Dr. Hugo Riemann, Leipsic.
Thomas Tapper.
Dr. Wm. Cummings, London, Eng.
Kate S. Chittenden, New York.
And others.

University of the State of New York.
Institute of Applied Music, New York.
Departments—**Metropolitan College of Music, Metropolitan Conservatory of Music, American Institute of Normal Methods, Synthetic Piano School, Fletcher Music Method.**
American Conservatory, Chicago.
Gottschalk Lyric School, Chicago.
Mrs. John Vance Cheney School, Chicago.
Detroit Conservatory.
Broad Street Conservatory, Philadelphia. And others.
Also in the Eleven Leading Conservatories or Colleges of Music in Canada.

There are already over 250 teachers of the System, but the demand is greatly increasing Miss Fletcher studied for five years in Europe, and has already successfully introduced her System in the European centres, Leipsic, Berlin, Brussels and Paris. Special advantages to those willing to go abroad with the System. The different sets of apparatus invented by Miss Fletcher are fully protected by patents in Canada, the United States, England, Germany, France, Switzerland, etc. This System can not be taught by mail, and the Fletcher certificate of authorization to teach is only obtainable, with the apparatus, by taking the course of instruction. Write for information and circulars with letters of endorsement, to Miss Evelyn Ashton Fletcher, 1125 Madison Ave., or Mrs. E. A. Sturgeon, 5155 Cornell Ave, Chicago, or to the Corresponding Secretary of the Fletcher Musical Association, Miss La B. Brown, the Nightingale, Dudley St., Roxbury, Boston.

BOSTON MUSICAL BUREAU

HENRY C. LAHEE
formerly Secretary of the New England Conservatory of Music.
218 TREMONT STREET, BOSTON

The only Teachers' Agency devoted exclusively to the Special Branches—Music, Oratory, etc. Send for Circular.

AMERICAN
Method of Singing

Copyrighted May, 1900, by the discover,

MARY M. SHEDD,

Auditorium Building, - - CHICAGO.

This method is unlike every other method, and through its scientific foundation work every accepted voice (no matter how small, or whether the age be 3 or 60), is developed into the same tones with which Patti, DeReszke and all great artists were born. Every great artist's voice can be restored to its former beauty with more volume, thrilling tones, pathos, and brilliancy than when formerly at its best, as no singer has ever yet known the possibilities of his voice, or else he would not have lost one note.

Thorough investigation solicited. Booklet free. No one understands this method outside of Chicago Studio.

Miss Shedd will be at the Waldorf-Astoria, New York City, from September 16 to 23. The method will be demonstrated by Miss Shedd and pupils, who will accompany her.

SCRIBNER'S MUSICAL PUBLICATIONS

In Preparation

THE STUDENT'S HANDBOOK OF MUSIC-HISTORY

By THOMAS TAPPER

Illustrated. 12mo. $1.25 net

This volume will be gladly welcomed by the many teachers and students who have had difficulty in finding a satisfactory text-book on the history of music. Mr. Tapper's high reputation as an expert on all matters connected with the teaching of music is a sufficient guarantee of the excellence of the work. Besides giving the reader a comprehensive view of the whole field and showing him how to continue his studies to advantage, it will contain a number of original and valuable features not found in similar works.

AN INVALUABLE AID

Guide to Practical Musicianship

For Students of Piano, Organ or Violin

By A. J. GOODRICH.

In his new system, the author does away with the old and slavish process of rote memorizing, *i. e.*, playing notes and repeating them until memorized, without attempting to master the composer's design; and he illustrates the means by which intelligent students may, in a comparatively short time, master any composition that does not present technical difficulties beyond their conception.

The results are three-fold:

1. A great economy of time.
2. An intelligent understanding of compositions.
3. An improved memory.

Professional musicians, practical teachers, amateur musicians and students of music have long felt the need of some improved method that would reduce the time required to memorize a composition, and Mr. Goodrich presents a method that he subjected to a thorough and exhaustive test, with eminently satisfactory results, before putting his ideas in shape for publication. Every musician needs a copy of "Goodrich's Guide to Practical Musicianship." It is the author's firm belief that, by its aid, compositions can be mastered in from one-quarter to one-half the time required by old systems.

Paper Binding. Price, $1.00.

Published by the HATCH MUSIC COMPANY, PHILADELPHIA.

A Special Offer to Schools and Teachers Only.

MUSIC ON SALE

Our Plan: We offer to send, any time during the teaching season, a selection of Sheet Music, Studies, etc., etc., all of which may be retained until the end of the teaching season—until June, 1902—when payment is to be made for the music that has been used or sold, and all that has not been used or sold may be returned and credited. Various terms are applied to this method of doing business. We employ the term—ON SALE—to cover our plan.

[In order to avoid any misunderstanding, it may be well to state that while *On Sale Accounts* need not be settled, either by cash or by cash and returns, as noted above, until the close of the teaching season, *Regular Accounts* (those made up of items for music, books, etc., specially ordered) are due and payable monthly. Music specially ordered is not returnable.]

Its Advantages: While our plan of sending music ON SALE may offer the greatest inducements to those located in smaller cities, and in towns and villages where there are no large and complete stocks of music, it nevertheless offers advantages to those who reside in the largest cities. The possession of an up-to-date assortment of teaching material insures a supply of music suitable for all purposes and for pupils of all grades; avoids the necessity of hurriedly ordering music; makes one independent of delays in mail and express deliveries; enables one to become intimately acquainted with the latest issues—an important consideration for all who wish to keep fully posted—and puts the teacher who resides at some distance from a complete stock of standard music on an equal footing with fellow-teachers more fortunately located.

Selecting Music: Teachers may make their own selections from our catalogue, which will be mailed upon application, or upon receipt of the blank, printed below, properly filled out, we will make such selection as will, in our opinion, give a complete supply of most useful material. As a rule, the latter plan will be found more satisfactory. The best descriptive catalogues fail to give all of the information needed to make suitable selections. Catalogues are complete only when issued, and it is impossible to keep them up-to-date. Selections made by us will include our latest and best publications. Our experience in selecting music designed to cover all requirements gives us advantages possessed by comparatively few teachers. We make up more than 90 per cent. of all selections sent ON SALE, and the instances are rare, indeed, when they fail to give entire satisfaction. Our interests lie in sending music that can be used and sold. If we make poor selections, we have our work and trouble for nothing; if we make satisfactory selections, we are assured of payment for a considerable portion, or for all of the shipment; also of good will and future patronage.

Give Full Particulars: Teachers can materially aid us in making judicious and satisfactory selections by giving full information upon the following points: 1st, the approximate number of pupils to be supplied; 2d, the grades of difficulty (we grade all music from 1, very easy, to 7, difficult); 3d, the style or character of music desired; 4th, the kind of studies needed. If vocal music, name the voice; if organ music, let us know whether the music is wanted for pipe or reed organ.

[No matter *how often* ON SALE music is ordered, always give the information noted above. Instructions given with the first, will not answer for subsequent orders. On account of the variety and extent of our mail business, it is impossible to remember each individual case. Explicit instructions with each order will enable us to fill it in a prompt and satisfactory manner.]

Returns and Exchange: The original selection may be retained until the end of the teaching year, as noted above, or any portion that has not been used or sold may be returned any time during the year, at the option of the customer, and exchanged for another selection; we will add, at any time, such additional music as may be desired—all to be included in the final settlement.

Our Publications are noted for correctness and beauty, and as each subject has been selected because it possessed some special teaching merit, the entire catalogue is exceptionally useful. The value of our editions has been greatly enhanced by careful editing. Among the leading teachers of this country who do our editorial work, we mention the following: William Mason, William H. Sherwood, W. S. B. Mathews, Albert Ross Parsons, S. B. Mills, Emil Liebling, Robert S. Goldbeck, Richard Hoffman, Wilson G. Smith, Constantin von Sternberg, Bern. Boekelman, Jaroslaw de Zielinski, J. S. Van Cleve, E. R. Kroeger, Thos. a'Becket Homer N. Bartlett, H. C. Macdougall.

Our Discounts: All ON SALE music is billed at regular cash discounts.

New Accounts: We solicit and open accounts with all responsible parties. Those with whom we have no accounts are requested to send references with first order. As references we prefer music dealers, but do not insist upon having them.

No Risk: *As payment is to be made only for music that is used or sold, acceptance of our offer to send a selection ON SALE involves no obligation to purchase.*

The blank printed below will, if properly filled out, give all the information needed to enable us to make up a selection that will please. Our publications are superior in every respect, and our discounts are more liberal than those offered by any other house. ANY OTHER INFORMATION DESIRED WILL BE CHEERFULLY FURNISHED.

HATCH MUSIC COMPANY, - PHILADELPHIA, PA.

Magnificent 50 Cent Collections of Piano Music

PUBLISHED AND FOR SALE BY THE HATCH MUSIC COMPANY

Easy Pieces for Little Folks

IN THE FIRST GRADE.

The demand for meritorious pieces of the first grade of difficulty, always great, is constantly increasing, and the preparation of EASY PIECES FOR LITTLE FOLKS was undertaken in order to add to the supply of this material a choice collection, selected with a view of presenting the most extended variety in character, tone and touch. The most entertaining and beneficial examples have been taken from the works of famous instructors and writers for young players. All of the selections have been carefully fingered, revised, and many of them fully annotated—attention being called to vital points. The annotations act as a monitor in the absence of the teacher and not only aid the pupil in properly interpreting the author's thoughts, but make the teacher's work comparatively easy—certainly adds to its effectiveness.

The variety of styles, contained in this excellent work, are neatly contrasted. Too much stress cannot be laid upon the importance of contrasting styles in the formation of correct musical taste, and this feature will be fully appreciated by all instructors having advanced ideas.

EASY PIECES FOR LITTLE FOLKS contains several old favorites, but with this exception the thirty-five pieces included in its contents are new. Each piece is of the first grade of difficulty and included on account of its merit. In making the selection, a great number of pieces were carefully and critically examined, and the editor included those which would, in his opinion, make the strongest and best collection. No expense has been spared in its preparation.

EASY PIECES FOR LITTLE FOLKS is issued in a manner which cannot fail to attract attention. It is printed from new plates, on a fine grade of music-book paper, and is neatly and attractively bound.

In order to show, at a glance, the musical worth of this book, we print the

Folio of Easy Pieces

IN THE FIRST GRADE

(Companion to "Easy Pieces for Little Folks").

"Easy Pieces for Little Folks" the most popular collection of first grade music ever published, has had an enormous and constantly increasing sale. Its success confirmed our opinion that a work of this character was needed—that teachers would welcome a first grade book containing instruction and recreation in well balanced proportions. Numerous inquiries for another collection of similar character led to the preparation and publication of a companion volume under above title.

Experience gained in the preparation of "Easy Pieces," and from teachers who have used it, enabled us, in making it with first grade pupils, has enabled the editor to make a very strong book of the Folio, which contains thirty-four compositions for little folks. With a view of pleasing all tastes, and with the hope of encouraging young musicians to investigate all it became familiar with every variety of harmonic construction was exercised in the selection of subjects. Experienced teachers will appreciate the editor's motive and will find it an extremely useful work.

All of the selections have been carefully revised and fingered, and many of them comprehensively annotated. We have no hesitation in saying that it is, in some respects, a decided improvement over its predecessor.

FOLIO OF EASY PIECES, printed from new plates on a fine grade of music-book paper, is neatly bound and cannot fail to attract attention.

To show, at a glance, the ground covered by this excellent book, we print the

MELODIC SKETCHES

Twenty-four Characteristic Pieces in the Second Grade.

The initial number in our series of 50 cent books, published under the title: "Easy Pieces for Little Folks," met with instant success, conclusively proving that the demand for books of this character, covering the first and second (and probably the third) grades of difficulty, is practically unlimited. The ordinary 50 cent book is a "collection" made up by using old sheet music plates—good, bad and indifferent pieces—built upon no particular plan, and printed in book form solely for the purpose of providing a new use for worthless plates. EASY PIECES and MELODIC SKETCHES are BOOKS, the contents of which were selected, revised, fingered and annotated with a view of making the strongest and best collections of music in the first and second grades, regardless of expense. Both must have large and constantly increasing sales, because they deserve success; they are the best that can be produced.

MELODIC SKETCHES—the second book of the series—is an admirable collection, designed for use in the second grade—contains nothing above or below that grade. It presents a series of contrasts—contrasts of character, contrasts of tone qualities and touch—thereby combining beneficial instruction with recreation and amusement. It follows the latest educational methods—seeks to instruct by means of pleasing forms, which cannot fail to awaken in youthful minds a desire for knowledge.

The brilliant *tarantelle*, the martial *rondo*, the rippling brook, the Hungarian dance, the quiet song of love, the joyous village festival, the cheery hunting song and other characteristic sketches are all illustrated in this charming collection, which includes all styles and shades of color. It would be difficult to arrange a more pleasing book, or one better suited to the purpose.

MELODIC SKETCHES is printed from new plates, on a fine grade of music-book paper and is attractively bound. It cannot fail to interest both teacher and student.

To give an idea of its value, we print the

Bound in Paper. Price, 50 Cents.

Nineteen Tone Pictures

IN THE THIRD GRADE.

The third in our new series of 50 cent books, is published under the above title. In announcing the publication of "Melodic Sketches"—the second of this series—we said "The demand for books of this character, covering the first and second (and probably the third) grades of difficulty, is practically unlimited." It will be noticed that we had, at that time, more or less doubt regarding a third grade collection, but its reception has convinced us that NINETEEN TONE PICTURES will be fully as popular and salable as the other books of this series. The three collections are the strongest and best that have ever been published to sell for 50 cents per copy.

No expense has been spared to make them perfect in every respect. In the selection of the contents, the revision, fingering and annotations, paper, printing and binding, they are unequaled.

NINETEEN TONE PICTURES is a collection of third grade music—contains nothing above or below that grade. In its preparation, the editor has included pieces which give the greatest variety in style, and contrast of tone color, and he has prepared a volume which cannot fail to please the most critical teacher or student. To the player of third grade music, it offers all the requisites for acquiring a musical taste of pure and broad character. The examples selected are not of great length, it being deemed more valuable to include a greater number of selections, in order to permit a more extended variety of subjects. Classic forms have been purposely omitted, simply because a large library of this class of works is at the disposal of teachers and students, but books containing good and graded compositions, illustrative of the romantic school, are not as readily obtainable. On that account it is believed that this work will supply a want that it will be welcomed by teachers and students.

Each piece included in this collection has been carefully revised and fingered, annotations have been added where needed or deemed advisable. In every particular it is a complete and perfect book.

NINETEEN TONE PICTURES is printed from new plates on a fine grade of music-book paper, and is handsomely bound in paper. Mechanically it cannot be adversely criticised. We print the

Arthur L. Manchester

GRADE 1.

The Corner Stone of the Course.

Table Exercises; Instructions from the Very Beginning, Most Carefully Graded; Difficulties Introduced in Logical Order; Interesting Exercises and Etudes; No Octaves; Exercises for Free Wrist; Major Scales—*Written*, but *not* Played.

GRADE 2.

Introduction of Scale Playing; Exercises for Passing Under the Thumb; Minor Scales Written; Beginning of Arpeggio Work (Broken Chords); Major and Minor Chords Awakening of the Ideal of the Singing Touch; Interesting Etudes; Careful Grading of Difficulties.

The Preparatory Gymnastic Exercises, in Grade 1, are Practical and Helpful.

GRADE 3.

Velocity Assumes Some Importance; Attention Given to the Staccato, while Cantabile Playing Is Carried Along with Equal Care; Etudes Become More Like Pieces; Polyphonic Playing Introduced; Exercises for Weak Fingers in Each Hand.

GRADE 4.

Polyphonic Playing Carried Forward; Rhythmical Problems (Two Against Three) Introduced; Greater Richness in the Etudes; Etudes for Melody Playing, Rapid Runs, Trills, Arpeggi, Marked Rhythms, Extreme Agility, Fourth and Fifth Fingers Interest Maintained Throughout the Grade.

GRADE 5.

Musical Material of Great Beauty; Etudes for Left Hand, Octaves, Polyphonic Playing, Staccato, Double Notes, Grand Arpeggi, Fourth and Fifth Fingers. In Singing Tone, Touch, Velocity and General Intelligence, Much More is Demanded of the Pupil.

GRADE 6.

Etudes for Extended Finger Touches, Staccato, Doubl Notes, Extreme Rapidity in Staccato and Runs; More Attention Given to Octaves; Pupil's Task Steadily Increasing in Difficulty—Greater Requirements in Regard to Touch, Interpretation, Color and Phrasing.

GRADE 7.

Pieces and Etudes by Saint-Saëns, Henselt, Kullak, Chopin, Mendelssohn, Raff, Alkan and others. These, Making Greater Demands upon the Pupil, advance his Technical Skill to the Highest Efficiency and Insure Ability to Interpret the Greatest Works for the Piano.

Several Opinions.

WILLIAM H. SHERWOOD: I am happy to state that the "National Graded Course" is remarkably adapted to the needs of teachers and students of music. Your claim in regard to the excellent grading of the studies is a thoroughly just one. I do not think that I have ever seen as good a succession of topics and exercises arranged as they are from the beginning on, using the best kind of materials from all sources and without any superfluous pages.

WILSON G. SMITH: I have been particularly impressed with the practical value and uniform excellence of the "National Graded Course."

AD. M. FOERSTER: The "National Graded Course" is destined to hold a foremost position among the works of its class. I do not know of a better work, one containing a more interesting and valuable selection of studies and pieces for the various peculiarities to be mastered. A list of desirable pieces that may be added to each part, if found necessary, is given in each grade, also definitions of all musical terms used in this work. The work is bound to find favor with thoughtful teachers and students.

O. R. SKINNER: I like the "National Graded Course" much better than any other work I am familiar with. The editing seems to be thoroughly well done, and the print leaves nothing to be desired.

(Want of space alone prevents printing the opinions of hundreds of well-known teachers in all sections of the United States and Canada.)

It Will Help YOU in Your Teaching.

Because

- It embodies the work of the most eminent pianists and teachers in America.
- It can be readily adapted to your "method," no matter what that may be.
- It is the LATEST work of the kind.
- ALL of the studies are carefully annotated, fingered and edited.
- It is the most carefully graded of any course before the public.
- It begins at the beginning of study.
- It saves the time that otherwise would be spent in laborious and often unrewarded search after that which is good and up-to-date.
- It covers the entire field of piano literature in an eminently practical, interesting and stimulating manner.
- Hundreds of your fellow teachers from all parts of the country have sent us unsolicited, enthusiastic commendations of these very features.

This complete work (7 grades) together with a specially prepared pamphlet entitled: "Hints for Obtaining the Best Results in Using the National Graded Course." will be sent upon request, subject to examination and approval—without any obligation to purchase.

MELODIC SKETCHES

Twenty-four Characteristic Pieces in the Second Grade.

The initial number in our series of 50 cent books, published under the title: "Easy Pieces for Little Folks," met with instant success, conclusively proving that the demand for books of this character, covering the first and Second (and probably the third) grades of difficulty, is practically unlimited. The ordinary 50 cent book is a "collection" made up by using old sheet music plates—good, bad and indifferent pieces—built upon no particular plan, and printed in book form solely for the purpose of providing a new use for worthless plates. EASY PIECES and MELODIC SKETCHES are BOOKS, the contents of which were selected, revised, fingered and annotated with a view of making the strongest and best collections of music in the first and second grades, regardless of expense. Both must have large and constantly increasing sales, because they deserve success; they are the best that can be produced.

MELODIC SKETCHES—the second book of the series—is an admirable collection, designed for use in the second grade—contains nothing above or below that grade. It presents a series of contrasts—contrasts of character, contrasts of tone quality and touch—thereby combining beneficial instruction with recreation and amusement. It follows the latest educational methods—seeks to instruct by means of pleasing forms, which cannot fail to awaken in youthful minds a *desire* for knowledge.

The brilliant *tarantelle*, the martial *rondo*, the rippling brook, the Hungarian dance, the quiet song of love, the joyous village festival, the cheery hunting song, and other characteristic sketches are all illustrated in this charming collection, which includes all styles and shades of color. It would be difficult to arrange a more pleasing book, or one better suited to the purpose.

MELODIC SKETCHES is printed from new plates, on a fine grade of music-book paper and is attractively bound. It cannot fail to interest both teacher and student.

To give an idea of its value, we print the

Nineteen Tone Pictures

IN THE THIRD GRADE.

The third in our new series of 50 cent books, is published under the above title. In announcing the publication of "Melodic Sketches"—the second of this series—we said "The demand for books of this character, covering the first and second (and probably the third) grades of difficulty, is practically unlimited." It will be noticed that we had, at that time, more or less doubt regarding the third grade collection, but its reception has convinced us that NINETEEN TONE PICTURES will be fully as popular and salable as the other books of this series. The three collections are the strongest and best that have ever been published to sell for 50 cents per copy.

No expense has been spared to make them perfect in every respect. In the selection of the contents, the revision, fingering and annotations, paper, printing and binding, they are unequaled.

NINETEEN TONE PICTURES is a collection of third grade music—contains nothing above or below that grade. In its preparation, the editor has included pieces which give the greatest variety in style, and contrast of tone color, and he has prepared a volume which cannot fail to please the most critical teacher or student. To the player of third grade music, it offers all the requisites for acquiring a musical taste of pure and broad character. The examples selected are not of great length, it being deemed more valuable to include a greater number of selections, in order to permit a more extended variety of subjects. Classic forms have been purposely omitted, simply because a large library of this class of works is at the disposal of teachers and students, but books containing good and graded compositions, illustrative of the romantic school, are not as readily obtainable. On this account, it is believed that this work will supply a want; that it will be welcomed by teachers and students.

Each piece included in this collection has been carefully revised and fingered, annotations have been added where needed or deemed advisable. In every particular it is a complete and perfect book.

NINETEEN TONE PICTURES is printed from new plates on a fine grade of music-book paper and is handsomely bound in paper. Mechanically it cannot be adversely criticised. We print the

FIFTEEN RECREATIONS

(In the Fourth and Fifth Grades)

FOR ADVANCED PLAYERS

When pupils reach the fourth and fifth grades, they frequently have their own ideas regarding the selection of compositions. Nevertheless the editor is confident that this excellent collection of solos will meet with favor, and his confidence is based upon the fact that all, even the most capricious, will find among the contents a number of pieces that cannot fail to prove both valuable and pleasing.

No collection of similar size, selling at the same price, contains so many and such a variety of Grades IV and V pieces, and no collection of similar character can claim the same careful preparation. In these days of advanced thought and advanced methods, teachers demand revised, fingered and annotated editions, and they also demand editions with exact and proper phrasing clearly indicated. And these demands are so strong that the issues of publishers who do not yield to them meet with scant approval.

With these facts in mind, the editor aimed to make FIFTEEN RECREATIONS an absolutely perfect work, and it is our belief that he has succeeded.

The selections are admirable, admirably contrasted in styles and moods, and include material available for all occasions whether public, semi private (such as Commencements), or the home.

FIFTEEN RECREATIONS is printed from new plates on a fine grade of music-book paper, and is neatly bound, with an attractive cover.

To give an idea of the character and variety of the selections included in this collection, we print the

Endless Amusement

A COLLECTION OF FOUR HAND MUSIC.

The fourth book in our 50 cent series is published under the above title. "Easy Pieces for Little Folks," "Melodic Sketches," and "Nineteen Tone Pictures"—the first three books in this series—cover a special field to first, second and third grades of piano solos, and they cover the field in a manner which has met with the hearty approval of teachers and students.

As a rule, collections of music in book form possess little or no educational value; no well-defined plan or principle can be detected in their make-up, they are collections—nothing more—and their sale depends either upon an attractive cover, or upon one or two popular pieces, included for the sole purpose of "carrying" a very ordinary selection of music.

Endless Amusement, and the other books in this series, do not belong to the class of publications described above. They have been carefully compiled and edited. The editor of the series, a well-known teacher, has exercised discriminating judgment and great care in the selection of the subjects. Each piece possesses some feature of educational value. All of the selections have been carefully edited and fingered (many of them have been annotated), either by the editor or by other well-known teachers. This is an important feature. No other 50 cent books can claim the same careful preparation.

A glance at the contents (printed below) will show that the editor has succeeded in making a strong collection. The seventeen attractive compositions are varied and tuneful—each piece presenting some desirable quality—the sole reason for its use. As every plate was engraved expressly for this work, the editor was not compelled to include anything which would not add strength and value; in other words, there was no necessity for "padding" when subjects could be selected from the catalogues of all leading European publishers. They vary in difficulty from Grade I to medium Grade III, and the contents include: works in which both parts are of equal difficulty; works in which one part (either *Primo* or *Secondo*) is easy, while the other requires a more experienced performer. The compositions embrace most of the well-known musical forms. Each number is carefully fingered in both parts and the annotations will prove helpful.

It cannot fail to please teachers and pupils, who will quickly find it a necessary adjunct for study and recreation. Without exception and regardless of cost, we believe that it has no equal; that no other collection of four hand music contains so much instructive and amusement value.

Endless Amusement is printed from new plates on a fine grade of music-book paper and is attractively covered and bound. It will attract attention; an examination will prove that a description cannot do it justice. We print the

JUST PUBLISHED

STRAY FANCIES

TWENTY-FIVE SELECTED COMPOSITIONS IN THE SECOND GRADE

(Companion to "Melodic Sketches.")

Frequent inquiries for another collection of second grade music, led to the publication of this volume under the title of "STRAY FANCIES." The characteristic features which have made our FIFTY CENT BOOKS the most useful and most popular series of educational works ever published, have been retained in the compilation of this number. An unusually large amount of valuable material was examined in making the selections, and neither expense nor labor was spared in the preparation of material and plates. Each subject has been carefully edited, fingered and annotated, and "STRAY FANCIES" is offered with the belief that its sale will be fully as large as that of its companion volume.

Paper Binding. Price, 50 Cents.

CHARACTERISTIC SKETCHES

A COLLECTION OF THIRD GRADE PIECES

(Companion to "Nineteen Tone Pictures.")

"Nineteen Tone Pictures" has had a large and constantly increasing sale, and we feel assured that its companion will prove as great a success. The editor has exercised great care and nice judgment in the selection of subjects, and for variety of style and contrast in tone color, it is doubtful whether "CHARACTERISTIC SKETCHES" can be equaled by any other collection of third grade music—not excepting the collections which sell for twice the price. Each piece (it contains nineteen complete pieces) has been carefully edited, fingered and annotated, and the work cannot fail to prove useful for recreation, as well as for educational purposes. Uniform in style with the other books contained in this series.

Paper Binding. Price, 50 Cents.

In Press. Will Be Ready Oct. 10th

SPECIAL INTRODUCTORY PRICE: All orders received prior to October 31st, will be filled at 20 cts. per copy, postpaid. This special price applies only to orders accompanied by cash. If to be charged, the postage (4 cts. per copy) will be added.

Hatch Edition. No. 74.

Heins Album for the Pianoforte

An interesting group of compositions of about the third grade, selected and combined with a view of affording both instruction and amusement. Heins is celebrated for melodious themes, and for their brilliant and showy treatment. He possesses striking originality, and successfully handles all varieties of subjects and styles—grave or gay, brilliant or sedate. On account of their brilliancy, and because they lay well under the hand, many of his works are favorite as solos for commencements and public entertainments. Young performers will appreciate the latter quality, which insures confidence in the ability to produce satisfactory results. The selections contained in this ALBUM include many of the best examples of the author's art and they have been chosen with a view of furnishing pleasing contrasts.

CONTENTS.

At West Point. Op. 184.
Coquette (The) (Die Zierliche) Op. 92.
Cuckoo (The) Clock. (Die Schwarzwälder Uhr.) Op. 224.
Enchantress (The). (Die Zauberin.) Op. 93.

Paper Binding. Price, 50 Cents.

Hatch Edition. No. 75.

Gänschals Album for the Pianoforte

Any collection of musical compositions of this character should contain the author's best works, but it is none the less important, in order to avoid monotony, that the selections shall present strong contrasts. In the compilation of this Album, the editor has exercised extreme care and splendid judgment. Among others, attention is directed to the grace note studies, studies of arpeggios, studies of octaves—broken or otherwise—etc. And there is a similar generous variety of style, a graceful gavotte being close neighbor to a barcarolle, a polka rondo to a descriptive or imitative sketch. Altogether it is a splendid collection, one that cannot fail to please students as well as those in search of pleasing music for recreation and amusement. Each composition has been revised and carefully fingered.

Bohm Album for the Pianoforte.

The ALBUM covers the great breadth and range of his works, presents them in several grades of difficulty, and illustrates his various moods. Not only as a means of recreation will this work prove interesting; it will be found valuable for the purpose of study, for at his best Bohm needs study if his compositions are to be well played. It is the editor's belief that players of all grades will find this ALBUM both useful and enjoyable.

Hatch Edition. No. 77.

Behr Album for the Pianoforte

A glance at the contents will show the wide range of subjects covered. All are treated in a manner that prove both interesting and valuable to the student. The collection presents contrasts in style and rhythm—the blithe rondo, the sentimental romance, the bright military sketch and the slow dance of Grandpa are intermingled. Contains material to please all tastes, and prove a valuable aid to the teacher. None of the compositions are above the second grade.

VIRGIL CLAVIER METHOD

Extract from letter dated August 4, 1901.

"I have studied nearly all so-called method, and I am frank to say that I consider the *Virgil Method* the only method extant. All the others are a conglomeration of ideas, lacking in system and in logic, and I am satisfied it is the only method calculated to reach artistic results by a logical process."

A SELECTED LIST OF FIRST GRADE MUSIC AND BOOKS

SHEET MUSIC.

BEHR, F.

Op. 503, No. 30. Au Revoir (Auf Wiedersehn) 20
A tender little melody, which sings out its good-bye hopefully. Requires a loose, quiet wrist and singing legato finger touch.

Op. 508, No. 18. Bird's Message (Vögleins Botschaft) 20
This makes somewhat greater demands on the player. Its bird imitation makes use of the added lines, which must be read quickly. A light wrist and flexible fingers are needed.

Op. 426, No. 1. Congratulation (Glückwunsch) 20
These congratulations are hearty and the piece should be played sturdily, but with no tendency toward hardness of touch. It is a useful teaching piece.

Ethel Polka 20
A sprightly little dance, bright in melody and easy in accompaniment. A good study in wrist touch and staccato.

Op. 575, No. 23. Farewell to Home (Abschied von der Heimath) 20
Somewhat similar in nature to Au Revoir, but more difficult. It is very pretty and sure to please the pupil.

Op. 575, No. 1. French Child's Song (Französisches Kinderliedchen) 20
A quite easy first piece with a good tune to it. It is entirely in position.

Grandpapa's Dance (Grossvater's Tänzchen) . 20
Grandpapa must be a jolly old fellow, for his dance is quite gay. Another good exercise in wrist staccato.

Op. 575, No. 2. In the Month of May (Im Mai) 20
A song of spring, bright and tuneful. It is a good first piece.

Op. 426, No. 5. Italian Song (Italienisches Lied) 20
This requires more musical perception from the pupil and, given at proper time, will be a good study in phrasing. The reiterated chords in left hand must be watched.

Kindergarten Waltz 20
A very graceful waltz, not hard to play, but pleasing. Should be carefully phrased.

Night in May (Mainacht) 20
This is a splendid piece for teaching purposes. It is clear in form, interesting in treatment and attractive in melody and harmony.

Night Patrol (Nächtliche Runde) 20
A good staccato is demanded in this piece. Its martial character is pronounced. Bright and interesting.

Parade of the Guard (Wachtparade) 20
Somewhat similar to the preceding, but more lively. Partakes more of the character of the two-step. We can easily imagine the guard swinging by at double quick.

Op. 426, No. 3. Star Greeting (Sternengruss) . 20
Of quite different style. Phrases are well marked and a smooth, singing legato is necessary in both hands.

BIEHL, A.

Op. 53, No. 5. Child's Prayer (Kinder Bitte) . 20
Short but very good. Excellent for developing the finer touches of expression.

Op. 52, No. 14. The Clock (Die Wanduhr) . . 20
Very characteristic. The left hand adds much to the effect and should be well played.

Op. 53, No. 2. Dance on the Lawn (Tänzchen im Freien) 20
This dance shows the frisky disposition of the dancers. It is not difficult, but pleasing.

Op. 53, No. 7. Garland Weaving (Beim Kränzewinden) 20
A beautiful little piece. The second part makes some demands upon the left hand. Well worth study.

Op. 52, No. 6. How Hans and Gretchen Dance (Wie Hänschen und Gretchen tanzen) 20
Spirited and affords good wrist training.

Op. 52, No. 13. Joyous Days of Youth (Fröhliche Kinderzeit) 20
A sprightly figure in the melody and a crisp, clean chord accompaniment are the features of this piece.

Op. 52, No. 5. Little Flatterer (Schmeichelkätzchen) 20
Simple melody for right hand, with a contrapuntal accompaniment for the left. Excellent teaching piece.

Op. 52, No. 15. Little Soldiers' March (Kleiner Soldaten Marsch) 20
An attractive study in chord playing in left hand, with a good tune in the right. Not hard, but pleasing.

Op. 52, No. 10 Picnic Dance 20
Exemplifies its name. A jolly dance, such as happy picnicers would indulge in. Good teaching piece.

Op. 53, No. 1. Wild Rider (Der Wilde Reiter) 20
A good descriptive piece, requiring firm tone and light wrists and arms. Good study.

BOLCK, O.

Op. 68, No. 1. Weaving Garlands (Beim Kränzewinden) 20
A very tuneful melody with broken chord accompaniment. Attractive without undue difficulty.

ENGELMANN, H.

Op. 408, No. 2. Curly Locks Polka 25
A taking little dance piece. Sure to please the young player.

Op. 408, No. 4. Humpty Dumpty Schottische 25
A brisk Schottische. Like all of Engelmann's pieces, it is full of melody and interestingly harmonized.

Op. 408, No. 6. Jack and Jill Galop 25
Somewhat similar to No. 2. Bright and pleasing.

Op. 422, No. 3 King's Delight Mazurka . . . 25
A characteristic Mazurka by same author. Good practice in phrasing. Not difficult.

Op. 408, No. 3. Little Bo-Peep Mazurka . . . 25
Very graceful. Contains excellent practice in staccato finger work.

Op. 408, No. 5. Little Boy Blue March 25
A good march. Excellent practice in wrist touch. Sure to please.

Op. 408, No. 1. Mother Hubbard Waltz . . . 25
A graceful waltz, no hard places to discourage the young player.

Op. 422, No. 5. Old King Cole's March . . . 25
A bright piece, good for teaching purposes and sure to interest the pupil.

Op. 422, No. 4. Pipe and Bowl Schottische . . 25
Useful to the teacher. Its flowing melody and taking rhythm will make it interesting to the pupil.

Op. 422, No. 1. Start Up Waltz 25
Sure to start the pupil to practicing it with vigor. It is easy, bright and jolly.

Op. 422, No. 2. Tweedle Dee, Tweedle Dee Polka 25
Brisk in movement; easy to understand and effective when well played.

Op. 422, No. 6. Wind Up Galop 25
Another of the same sort. This set of easy teaching pieces by Engelmann is certain to prove useful.

GAEL, H. VAN

Op 54. Coquette (La Viennoise) Valse 25
Well named. The music is coquettish. Good training for acquiring a light hand and arm.

Op. 53. Guitars and Mandolins (Guitares et Mandolines) Serenade 25
No sadness in this Serenade. The serenaders must be full of joy, if the music tells its story truly.

Op. 52. Little Father (Le Petit Pâtre) Pastoral 25
Rather more serious in tone than the preceding and, consequently, good to use in developing taste. Excellent chord practice in left hand.

Op. 56. Little Hunters (Les Petits Chasseurs) March 25
An attractive and useful teaching piece.

Op. 55. Skaters (Les Glissades) Mazurka . . . 25
The sparkle of Winter weather is in it. Fresh and full of life, it brings thoughts of fun on the ice.

Op. 51. Voice of the Heart (La Voix du Coeur) Song Without Words 25
Beautiful little song without words. A singing touch is needed to bring out its melody. Well worth using.

GOERDELER, R.

Lullaby 25
A beautiful melody which gives opportunity for cultivating a singing tone. Very interesting.

Merry-Go-Round 25
A joyous little piece. Phrases are well defined, and will aid the pupil in understanding simple form.

Mill Wheel 25
Characteristic little piece, full of go and vigor.

Scotch Bag-Pipe 25
The drone of the bag-pipe is well brought out in the monotonous time of this piece. Splendid practice and worth frequent use.

Sweet Evelyn Waltz 25
An attractive little waltz of no particular difficulty. Melody of first part is in left hand. Effect of tie is good.

GURLITT, C.

Op. 101, No. 5. By the Spring (An der Quelle) 20
Like all of Gurlitt's pieces, this is very musical. It affords opportunity for the practice of phrasing.

Op. 101, No. 7. Lament (Klage) 20
A quaint, mournful little melody. Valuable outside of technical reasons for developing appreciation.

Op. 130, No. 6. March of the Tin Soldiers (Zinnsoldaten Marsch) 20
Melody is given out by right hand and is then repeated in left. In six-eight measure. Very good.

Op. 101, No 2. Morning Prayer (Morgengebet) 20
Good study in legato chord playing. This piece affords practice needed by every young pupil.

Op. 101, No. 10. Song Without Words 20
Another musical song. Singing legato and phrasing are essential.

HELLER, M. P.

Op. 6, No 2. Festal March 20
The festal spirit is here. A good, strong march.

Op. 6, No. 1. Going to Church (Zur Kirche) . 20
The chimes and the organ are heard in this piece. Decidedly interesting to young players and sure to do them good.

Op. 6, No. 3. On the Playground (Auf dem Spielplatz) 20
A good study piece. The slurs give practice in lifting hand after binding two notes. A contrasted legato melody in second part should be carefully played.

HILLER, P.

Op. 66, No. 2. Grandmother's Dream 20
An excellent study piece. Its subjects are well contrasted and the work is evenly distributed.

Op. 66, No. 4 Little Rider 20
Splendid little piece. Its steady movement and suggestive rhythm are very taking. Splendid staccato practice.

Op. 66, No. 3 Lonely Rose 20
In the minor. The loneliness of the flower is told quite well. A singing legato and a chance for expression are its distinguishing features.

HOMANN, W.

Op. 10, No. 1. Festival Sounds (Festklänge) Rondino 25
A slow introduction leads into the jolly movement of the festival sounds. Some good exercise in run playing.

Op. 10, No. 2. Hunter's Song (Jägerlied) Rondino 25
These hunters start out in a bold, cheerful frame of mind, and keep it up to the end. A stirring piece in 6-8 measure.

KÖHLER, L.

Op. 210, No. 4. At Home (Am Gemüthlichen Plätzchen) 20
Quiet contentment characterizes this little piece.

Op. 210, No. 6. Cradle Song (Wiegenliedchen) 20
Quiet little cradle song, teaching finger control and singing tone. Very pretty.

Op. 210, No. 7. Soldier's Song (Soldatenlied) 20
A piece in which the martial spirit will be found. It is a good march.

KÜGELE, R.

Doll's Dance (Puppentanz) 20
There must be lively dolls, for this dance is full of go. Beside being a good teaching piece, it is sure to please.

LANGE, G.

Op. 249, No. 1. In Rank and File 35
Erect and vigorous these soldiers march by. Occasionally the roll of the drum is heard. Not difficult.

LICHNER, H.

Op 78, No 4 First Ball. Rondino 35
Some good finger work can be gotten from this piece, which is tuneful and gay. A crisp staccato is necessary also.

Op 31, No 2. Forest Flowers Waltz 20
Very graceful waltz, full of melody. An excellent and instructive recreation.

Op. 57, No. 3. Twinkling Feet Waltz 20
Simple and free from catchy places, this waltz is nevertheless very attractive. If played daintily, it is very characteristic.

MERKEL, G.

Op. 31, No. 1. Children's March (Kindermarsch) 20
Short, but it is full of music. It should be played with decision.

PRIDHAM, J.

Fairies' Waltz 30
Its two subjects require somewhat different treatment. The first, a quiet hand and firm finger touch. The second, a light wrist touch changing to a finger touch for the runs. Very bright and pleasing.

REINECKE, C.

Op. 107, No. 12. Children and Cuckoo (Kinder und Kukuk) 20
The children's song and the call of the cuckoo are heard here. The children at times break off their song to imitate the bird. Instructive as well as pleasing.

RUMMEL, J.

March 20
A good example of this form. Bright and effective.

SARTORIO, A.

Op. 229, No. 7. Dreams of Youth (Jugendträume). Polka Mazurka 20
Good practice in dotted-eighth and sixteenth rhythm, and in double notes. Tuneful and without hard places.

Op. 229, No. 2. Italian Song (Italienisches Liedchen). Barcarolle 20
A singing melody with a broken chord accompaniment. Excellent practice in phrasing.

Op. 229, No. 13. Leisure Hour (In stiller Stunde) 20
This beautiful piece will repay study. While not difficult it can be made very effective.

Op. 229, No. 3. Military March (Militair Marsch) 20
A good march somewhat more difficult than those before mentioned. Well controlled arms and hands are needed. Results will be good.

Op. 229, No. 1. Under the Linden (Unter den Linden) Ländler 20
Splendid finger study. Bright and with brisk moving melody, it needs fluent playing.

SCHUMANN, R.

Op. 68, No. 10. Happy Peasant (Fröhlicher Landmann) 20
Too well known to need comment. With it is a Hunting Song, which is an excellent companion.

Op. 68, No. 2. Soldiers' March (Soldatenmarsch) 20
This well-known gem needs no comment. It is both useful and pleasing.

THOMÉ, F.

Melodie 20
A very beautiful piece. Its exquisite melody should be played with a full singing legato. The first bass note of each measure is staccato, making a peculiarly effective accompaniment.

WOLFF, G. T.

Op. 25, No. 7. Little Cradle Song (Wiegenliedchen) 20
A cradle song requiring thorough mastery, which will produce good effects. Well written and very pretty.

Op. 25, No. 11. Mill by the Brook (Mühle am Bache) 20
Brisk and characteristic. The clatter of the mill is given first with the right, then with the left hand.

WOOLER, A.

Golden Sunset 25
Especially useful for the running work in left hand. Very pleasing.

BOOKS.

Easy Pieces for Little Folks . . Paper Binding 50
The most popular collection of Grade 1 music ever published in book form.

Folio of Easy Pieces in the First Grade . . . . . Paper Binding 50
Companion to above. Contains thirty-four complete pieces. An extremely useful and pleasing collection.

TEACHER'S DEPARTMENT

YOU will be interested in the announcement that we have established a **Teacher's Department**, under the direction of a teacher of twenty years' experience, which will be entirely devoted to searching out, preparing, and supplying EVERY want of ALL classes and grades of teachers. This department is intended to aid the teacher in securing such music and other teaching helps as he may need. Preparations for its establishment have been making for the past four years, and it is already equipped with unusual helps. Behind it are the immense resources of the Oliver Ditson Company, which will be drawn upon to supply all demands.

We also send music ON SALE. These selections are made up of the latest and best teaching music. Our circular describing this method of supplying teachers will be sent on application.

WE SOLICIT CORRESPONDENCE AND WILL WELCOME INQUIRIES.

As already stated, this department is intended to aid teachers in securing proper teaching material, hence we will gladly answer questions and give suggestions to those who care to avail themselves of our help. Write us, giving full information as to the amount, grade, and style of music you use, and we will send you our catalogs, and keep you informed concerning the latest editions of Teaching and Choir Music.

Address TEACHER'S DEPARTMENT,
Oliver Ditson Company,
Boston, Mass.

N. B. Send for **Teaching Pieces and How to Teach Them**, a series of ninety-six page analytic and thematic catalogs of piano music.

If you teach singing send for **Selected Songs**, a similar series for high, medium, and low voice songs.

A438

All Teachers Should

Provide Themselves for the Season at Hand with the Following Desirable Teaching Material:

PIANO SOLO.

Armand, J. O.
Op. 10. Forty Small Pieces for Beginners.
(Short eight measure pieces) 75

Adams, Mrs. Crosby.
Five Tone Sketches 50
Primary Tone Pictures 60
Four Little Wrist Studies 40
Two Left Hand Studies . . . . . each, .25

Ellsworth, Nettie.
Happy Moments for Little Ones.
Book I and II . . . . . each, .50

Harris, Hubbard, W.
Op. 3. Instructive Pieces.
(First and second grade of difficulty.)
1. Song Without Words 25
2. Invention. (Two part) 25
3. Grotesque Dance 25
4. Idylle 25
5. Children's Revel 25

Liebling, Emil.
Op. 32. Instructive Pieces of Medium Difficulty.
1. Allegretto in A minor 50
2. Caprice in C 60
3. Romance in C 35

Lutkin, P. C.
Eight Instructive Pieces.
More especially intended for use in connection with the first part of Lebert & Stark's Piano Method, and written in accordance with the technical principles therein set forth.
1. Melody 25
2. Lullaby 25
3. Duet 25
4. Spring Song 25
5. Waltz 25
6. Fairy Song 25
7. March 25
8. Album Leaf 25

Mokrejs, John.
Village Scenes.
A set of six characteristic and instructive pieces in second and third grades, complete 60

Newcomb, Georgia D.
Album Leaves 50
A set of six character pieces in the first and second grades.

Powers, Mary L.
Echoes from Music Land 75
A collection of easy, short, instructive piano pieces. (Mostly two-part writing.)

Schoenefeld, H.
Op 21. A set of instructive piano pieces in dance form without octaves
1. March 25
2. Minuet 25
3. Polka 25
4. Valse 25
5. Mazurka 25
6. Gavotte 25
7. Tyrolienne 25
8. Polonaise 35

Dance Forms Without Octaves.
A set of first and second grade pieces.
1. March 25
2. Waltz 25
3. Polka 25
4. Mazurka 25
5. Schottische 25
6. Tyrolienne 25

Weldig, A.
Miniatures.
A series of instructive pieces of easy grade.
1. Commodo 15
2. Cantabile 25
3. Tempo di Valse 25
4. Scherzando 25

Any of the above will be sent for examination.

DO YOU REALIZE

the helpful work we are doing in the matter of examining with great care all new musical publications from which we select only the best and most interesting and list them in *The Music Review*, giving a description of their character, grade of difficulty, etc.

The Music Review

is published monthly, excepting July and August, at a subscription price of 50c. a year.

Consider how valuable to the teacher of music such a catalogue will become as a book of reference.

SIXTY PROGRESSIVE EXERCISES

FOR THE

PIANOFORTE

By J. Pischna

EDITED BY

Anton Door

These celebrated studies, a standard text-book at Vienna, Berlin, St. Petersburg, Moscow and other well-known European Conservatories, may be used by the young student as well as by the *virtuoso*. While they are not easy, they can be taken up at an early stage of music study and carried on through increasing grades of speed until the highest proficiency is obtained For acquiring independence of the fingers, and for rapidly strengthening the fingers and hands, they are unequalled. Although in one sense progressive, the variety of work offered is such that exercises needed in each particular case may be selected for practice without following the regular numerical order.

It may not be out of place to call attention to several important improvements which make our edition vastly superior to the original. Instead of grouping the preparatory studies in the opening pages, they immediately precede the exercises which they are designed to illustrate. All groups abbreviated in the original have been engraved out in full, so that each note is clearly presented. Relieved of mental worry, students are thus enabled to give undivided attention to the mechanical process. The entire work has been carefully revised and annotated.

While the improvements noted above have materially increased the number of pages and cost of publication, the price has been cut in two. The original sells for $2.00.

Paper Binding. Price, $1.00.

SPECIAL INTRODUCTORY PRICE: All orders received prior to October 31st, will be filled at 40 cts. per copy, postpaid. This special price applies only to orders accompanied by cash. If to be charged, the postage (7 cts.) will be added.

Hatch Music Company, Philadelphia, Pa.

MUSIC PUBLISHING

WRITE US FOR FULL PARTICULARS.

We have every facility for the prompt and satisfactory publication of any musical work—no matter whether it is a piece of sheet music or a large book. Our facilities are unsurpassed and there is no kind or style of work in our line which we cannot do in the very best manner at the least possible cost.

Our printing is all that could be desired by the most critical and is equal, in every respect, to the finest European press-work.

HATCH MUSIC COMPANY, PHILADELPHIA.

THIS SYSTEM IS COVERED BY COPYRIGHT.

MUSICAL KINDERGARTEN

FOR THE

PIANOFORTE

By FANNIE CHURCH PARSONS.

This system is most simple in outline and material.

It is most comprehensive and complete.

The materials used are, while very durable, most suggestive of the beauty of the art of music.

The lessons are equally instructive to either child or adult beginner.

The students do much real piano work, thus no intermediate course is necessary.

The stories and songs do not savor of the grotesque, but tend to refinement and culture.

The price for normal work, including materials, is within the reach of all.

The work can be taken by mail, or of a normal instructor, or of Mrs. Parsons personally.

Send for illustrated booklets.

Correspondence should be addressed to

MUSICAL KINDERGARTEN COMPANY,
Office, 6 W. Chicago St., Quincy, Mich.
STUDIO, 1306 AUDITORIUM TOWER, CHICAGO, ILL.

SONG FOR THE TWENTIETH CENTURY.

In the world is work to do.
Hasten, brothers then to do it.
Sages have the ages through
Borne themselves as if they knew it.
Men of sinew, men of brain,
See the progress, see the gain.
Join the song and the refrain,
Work to reach the perfect strain,
Work, and work together.

Make the present, than the past,
Grander in its evolution.
Work, and you will reach at last
Some great truths' divine solution.
Men of sinew, men of brain,
See the progress see the gain,
Join the song and the refrain,
Work to reach the perfect strain,
Work and work together.

Work the Eternal to attain,
Work awaits you, go and do it.
Scale the mount and toil the plain.
Doubt not Heaven, for work leads to it.
Men of sinew, men of brain,
See the progress, see the gain.
Join the singing and refrain,
Work to reach the perfect strain,
Work, and work together.—*Mrs. Whiton Stone*

PATIENCE AND PERSISTENCE.

MARIE BENEDICT.

Mere pygmies these seem, do they not? The amount they are able at any given time to accomplish, in comparison with the end to be attained, pitifully small; almost paltry in its littleness. But in reality they are giants in disguise; able to work miracles of strength, speed, dexterity, and, when guided by the right individuality, of artistic expression. Moreover, without the all-powerful co-operation of these, to the novice, seemingly insignificant beings, it is absolutely impossible to overcome the obstacles in any line of work or study. The traveler does not move with a single bound from the monotony of the level plain to the lofty mountain height, from which he discovers marvels of beauty wholly undreamed of by the dwellers in the low grounds. It is a long, and sometimes a weary climb to reach the summit; but there are pleasures by the way, which, if he has a spark of the love of beauty within him, will well repay the climber. His reward is not withheld until the summit is reached, for the tapestry of Nature is ever changing about him; the picture before him is continually including new wonders in its ever widening circle.

We often hear so-called music pupils say, "O yes, I love music; I would *love* to be able to play; but I can't practice, it is so tiresome."

They would like the fairy to transport them, in her magic carpet, from the plain to the mountain summit, without the slighest exertion on their part; but unfortunately, or fortunately, that is not the way by which one rises in real life; and, confidentially, student reader, what one really wants, in one's inmost self, one is always willing to work, and to work hard for, if need be.

In listening to a great pianist, many people seem to be under the impression that genius, in his case, has filled the office of the magic carpet in the old fairy tale; that it has lifted him from the common level to the height of fame with little, if any, exertion of his own. They give not a thought to the hours and years of patient, persistent work that have gone to the development of his natural powers, no matter how superb those natural powers may be. The story that the inmate of the hotel apartment adjoining that occupied by Mr. Paderewski, noticing the pianist's constant repetition of a long, and exceedingly difficult cadenza, resolved to count the repetitions, and actually reached the number of seven hundred and fifty before the pianist stopped, it may, or may not be exactly true, but it serves to illustrate the principle under discussion, because it discloses the means used by every great pianist in the technical conquest of the keyboard.

But you say, it is given to very few ever to attain the mountain peaks. True enough; but the little hills have a beauty of their own, which is within the reach of thousands. Because you have no expectation of being a Liszt, or an Essipoff, is there any reason that you should not develop your own musical taste to the utmost limit, and thereby enjoy all the pleasure and the benefit which music holds in store for you? It is a pity, through refusal to co-operate with our two giants, to miss what otherwise would be yours. I frankly own that there are occupations more exciting than the constant repetition of scales, arpeggios, technical exercises in octaves, thirds, chords, etc., but does not the result, in the gradually increasing ability to make the piano respond to your desire, put the monotony of the technical work quite out of mind? There is no surer means of conquering a difficult passage than that of separating it from its neighboring measures, and using it as an exercise; continually repeating it, at a very slow tempo, and with a firm, elastic pressure touch.

Oh, you haven't time to bother with that sort of thing? Very well; then you refuse to take the surest and speediest method of attaining the object: for in piano practice, one must always make haste by going slowly. A seeming paradox, yet a most important truth. Patient, persistent, slow practice is the only means of acquiring the clearness and crispness of tone in running work, the full, rich resonance in chord effects, the strength and elasticity of the wrist in octave playing, and the long sustained beauty of melody tone, all of which are so indispensable to genuine piano playing. If you have any fancy that you can learn to play the piano in one or two terms, or in one year at longest, by rattling through a few set exercises and trivial pieces, halting and stumbling in every line, or rushing on in glorious indifference to false notes in wholesale quantities, the sooner you recover from that attitude of mind the better it will be for you, and for your teacher as well. The piano is one of the easiest instruments for careless dalliance, striking a few of its keys here and there in a so-called "piece," with no thought of the marvels of beauty and power which are held within the strings; and it is one of the most difficult instruments to really learn to play. If you would master, even to a moderate degree, the fascinating secrets which the strings so jealously guard, you must willingly devote years of indefatigable effort, and unlimited energy of purpose, to the attainment of your object. Love of music, and perpetual league with the two giants whose names head this paper, are the absolute requisites to any smallest degree of success; whether your aim he merely to play at home, and for your friends, or professional work. I place the love of music first, because without that the hands of the giants will be hopelessly tied, as far as any real musical result is concerned. Yes, learning to play the piano is a great work; but its reward lies continually beside the long and arduous way, in the daily pleasure of the study, and the resultant gradual growth of power in the student. A reward which gradually increases in worth, as the picture widens before the mountain climber, as one mounts higher on the hill of achievement. Do you ask if it pays, if the reward is proportionate with the labor which it costs? If you have the love of music within you, there is nothing that will pay better in genuine delight, and in development of the higher faculties of your nature. If you do not care enough about learning to play to willingly devote yourself to the work, to the end that you may one day hear and interpret all of music's beauty that may be within your reach, you will miss one of the greatest resources that life has to offer. Said Carlyle, "Genius is the capacity for taking pains."

RIGHT THINGS AT WRONG TIMES.

HARVEY WICKHAM.

We have all heard of sweet bells jangled out of tune. Struck in a wrong order, the best carillon in Belgium would produce horrible cacophony. It is not enough that a precept be wise, it must be timely. It is not enough that a composition be beautiful, it must be adapted to the pupil at the stage of his development when it is given. We are all more or less prone to give good advice and set good pieces on our patron's lesson cards, without stopping to inquire further concerning them. I would like to quote in this connection a little waggish poem of Browning, setting forth the prevalence of poor diagnoses:

"You're sick, that's sure," say they.
"Sick of what?" They disagree.
"'Tis the brain," says doctor A.
"'Tis the heart," thinks doctor B.
"The liver—my life I'd lay."
"The lungs—The Lights"—ah me!

I quote from memory, so cannot vouch for the verbal accuracy of the above, but I dare affirm it truth. We treat all comers alike and we find in all our favorite technical disease. If we make a hobby of a loose wrist, we can see nothing but stiff wrists in every pupil and have no eye for random fingering or ear for humdrum dynamics. We give identical exercises to different cases and wonder that the same thing does not always work the same way. A useful lesson may be learned from the botanist if we follow him into the theories of some of his more common practices—or instead of botanist, perhaps I should say floraculturist.

It is a fact not known to all that plants and flowers require lime, iron, silica, potash, nitrogen, sulphuric acid, phosphoric acid and at least a half dozen other ingredients in the soil before they will grow. The scientific gardner makes a careful note of this, and supplies whatever elements happen to be lacking. If he supplies an element which is already present in due proportion, he loses his labor and his capital. For instance, if there be the proper chemical constituents in sufficient abundance to grow a perfect rose, save that the element nitrogen is lacking, no rose will grow, though he ply the wilting plant with lime and potash and all other known plant foods from sunrise till dark. Add a little nitrogen to its environment, and the bush starts up, having found at last what it needed, and just in proportion to the addition of the missing element, will it recover. As a chain is always measured by the strength of its weakest link, so the flower-bearing capacity of the earth is in proportion to the strength of whatever element is helow the normal strength, and the excess of other matters is pure waste.

Did you never have a pupil who for some strange reason or other, did not get on? Next time, do not he discouraged. Make an analysis of his case and see what is lacking. Be sure that until that *something* is found, all other things are useless. Perhaps he needs severer criticism—more likely he needs praise and encouragement. Perhaps he needs more advanced work—more likely he needs work which is more elementary. Perhaps his surroundings are unmusical at home—perhaps you yourself are not radiant with anything that might be called artistic enthusiasm. If your analysis fails to he correct, don't be afraid to try a little experimenting. Give one after another all those things which a growing mind might need; surely you can hardly fail in this way to stumble on the right measure. Study your pupils and learn to give the right things at right times.

THE Teachers' Forum

Conducted by N. J. COREY

This department is inaugurated for the purpose of uniting the many teachers who read THE MUSICIAN in a bond of professional brotherhood. It is to be their medium for the interchange of ideas, experiences, encouragement, discouragement and difficulties. The fullest correspondence is invited. The questions will be answered and suggestions given by the conductor and the contributions of those who wish to gain new light or to present their methods will be printed. We propose helping ever teacher who will permit us to do so; we intend to do everything possible to overcome the isolation with which you are burdened. Will you co-operate with us?

No conditions are attached: the department is open to *all* MUSICIAN subscribers. Address all communications to the Teachers' Forum, care THE MUSICIAN, Eighth and Locust Streets, Philadelphia, Pa. Do not hesitate, but be among the first to ask help, or to give some other teacher a suggestion. Let us know what you would like to have treated in its columns.—Editor of THE MUSICIAN.

'The gates of art are closed unto none; who so entereth thereat, though he seeketh perfection, yet shall he not find it."
—Ancient Egyptian Papyrus, 3580 B. C.

PREPARING FOR WORK.

N. J. COREY.

By the time this issue of THE MUSICIAN is received, the season's work of nearly all teachers will be well under way. Classes, if not already filled, will be in process of formation. Delightful as is the vacation, with all its outings and pleasures, it will have by this time assumed the aspect of a past dream, and we will have all awakened to the real functions of life again. Especially is this true of the music teacher, who has practically placed in his hands the directing of the life courses of other human beings, and who at the beginning of the season must again begin to think what he can do to make the work of his pupils most profitable to themselves. It is true, this thought is never absent from the mind of the conscientious teacher, for if he be true to his calling, his energies will be constantly devoted to others and their work. But at the beginning of a year's work all such thoughts seem to come back to one with renewed force. There are certain responsibilities connected with teaching work, certain duties to be fulfilled. This is especially true of the present time, and growing more and more with every advancing year. Time was when if the teacher taught the pupil to find his way glibly over the keyboard, his duty was considered to be satisfactorily performed. Not so now. The teacher must have in mind the whole musical development of the pupil, and musicianship as well as technical facility must be the aim of his activities. There are especial responsibilities in the cases of such pupils as wish to become teachers. Such pupils often ask for additional instruction in this direction, and it is sometimes a problem to the teacher just what to do to give the pupil the help that he particularly desires. This department has received a suggestive letter from Mr. August Geiger, of the Southern Female College in Georgia, which gives much information as to his own methods of developing musicianship, particularly along this line of pedagogy. We are glad to print it, the department being open to suggestions from all its readers. Mr. Geiger's letter is as follows:—

"Allow me to thank you for the reproduction of my letter in your March number. I am always ready to help others as well as learn from them. You can readily understand, that within the scope of a letter, only mere outlines can be given, but even with these only a faint idea of the work done can be gained. Now I notice that the M. T. N. A. intends to issue a syllabus on Pedagogy for the use of its members; the movement is one which I most heartily endorse, for it is a branch of our education that has been sadly neglected. Good teachers can be produced only by thoroughly preparing them for their work. Realizing the importance of this, I have during the past seven years endeavored to work out a course of pedagogy that covers a wide range of subjects, and, as I believe, effectively prepares a pupil for his work. As it is treated in the same way as any other study in our collegiate course, and as it is a compulsory study for graduation, I believe it is a long step in the right direction. I have known of a number of schools and teachers preparing to teach pedagogy, but I have not found any that seemed to cover the ground as thoroughly as the course that I have prepared, and I here give an outline of it for the benefit of those who are interested.

1. Why do we study music?
2. What is method?
3. When should a child begin to study music?
4. What teacher should be selected?
5. The teacher.
   a. His work.
   b. His justification.
   c. His helps.
   d. His preparation.
   e. Principles of instruction.
   f. Attention to teaching.
   g. Illustrations in teaching.
   h. Study of child nature.
6. Importance of finger exercises.
7. How to practice finger exercises.
8. Importance of correct fingering.
9. Practicing and fingering the scales.
10. How to practice in general.
11. The different touches and their explanation.
12. The pedals and their use.
13. Mechanical helps for developing technic.
14. Teacher and pupil and parent.
15. Educational needs of a music teacher.
16. Arrangement of a course of study.
17. Development of staff and notation.
18. History of the pianoforte.

This covers the theoretical ground, but hand in hand with it goes a practical course of teaching under my own supervision, and in which every idea advanced is put in practice.

I am firmly convinced that a course of this kind thoroughly worked out in every school of music would be of great benefit to the pupils, and would result in fully prepared teachers. It covers one full year's work, as each topic is thoroughly discussed from every standpoint. For those intending to teach such courses are invaluable."

A musician's first thought in looking over a scheme like the foregoing, is, that although it might prove very excellent in a school where the pupils could be gathered together in classes for general instruction, yet would be hardly practicable for the private teacher. How could such an elaborate outlay of lectures, lessons or talks, as the case might be, be presented to individual pupils? The application of such a course certainly has its difficulties in private teaching. It might be asked—Why cannot the private teacher organize a general class from among his pupils in order to give them such instruction? In some cases this would be possible, and in others difficult, and for two reasons. There is generally a much greater disparity in the ages of a private teacher's pupils, and many of them will not be ready for such work. Also a relatively small proportion of them will be preparing to teach, so that out of a considerable class there may be but a small number who are interested in such a special course of study.

There is one suggestion that grows out of it, however, for the thoughtful teacher. While it may not be possible to arrange so elaborate a course of lectures for private pupils, yet it suggests methods of systematizing one's own general instruction, and thereby imparting information that often seems to be lacking among even advanced pupils. There are certain facts connected with the rudiments of music, for example, that many teachers seem to assume that the pupil is already in possession of, and therefore takes no pains to drill them on. Let the teacher ask the pupil a few questions upon matters that a pupil is supposed to know all about, and he will be surprised at the answers that he will receive, indicating a most vague knowledge of principles that ought to be definitely and clearly fixed in the minds of all would-be musicians. Take so fundamental a term as pitch. The following are some of the definitions given by advanced pupils in the writer's own experience. "Pitch is the difference between two tones." "Pitch is the regulation of tones." "Pitch is the distance up or down the scale." "Pitch is the tone desired for beginning a musical phrase." These are only a few of the many vagaries that one will receive among answers to primary questions. The suggestion that comes from this is that it would be wise for the teacher to gradually accumulate a list of such facts and an outline of general musical information, and as progressively arranged as possible for convenient reference, and a little of which could be presented to the pupil at each lesson. There are many points in a musical education which one is liable to overlook unless written down where it will be conveniently accessible for occasional reference. If a teacher begins to write out such a compendium of musical knowledge, I mean of such facts and principles as should be brought to the attention of every pupil, he will be surprised at the rapidity with which it will grow, and at the size to which it will ultimately attain. If a little is given for each pupil's thought at every lesson, it will result in vast benefit to his general musicianship during the course of a few terms of lessons.

* * * * * * * * *

Considerable has been said in this department in regard to teachers aiming at and maintaining a high standard in their work. It seems that the toes of some of the readers of the column have been inadvertently trod upon, as is instanced in the following letter from which I quote:—

"As you ask all to correspond I will state my position and ask your advice. In a recent number the following statement was made by a correspondent. 'I cannot descend to the level of those who teach for twenty-five cents a lesson and whose learning is barest whitewash.' Now although I studied with one of the best teachers, and he told me to teach for not less than one dollar a lesson, I find that I am unable to do as I would like in the matter. Where I live there are three towns within a mile of one another. The people are hardworking railway men with meagre salaries and large families. There are five or six music teachers, mostly of an inferior order. One young lady, a conservatory medalist and returned from a three years course of study in Germany, has tried to obtain a higher price, but has been unable to secure a class or succeed in concert. I charge a small price and have a class of thirty, my time being filled from 9 A. M. till 10 P M. In concerts I have always been encored. Would you advise me to continue in this way, making little except friends, or would I do better to start afresh in a city."

The writer of this is indeed unfortunately located, if her standard of attainment is worthy of a better field. If the people are absolutely unable to pay more than twenty-five cents a lesson, it would be useless to try and raise the price. And yet a most unreasonable amount of time is being spent in earning a small amount. It would seem as if such a community ought to afford enough people who could pay fifty cents a lesson at least. Fifteen pupils at this price would be far better than thirty at the other, and the teacher could do much better work for the pupils. With one's system constantly overtaxed by excessive hours of labor, it is impossible to do justice to any of the pupils. Any teacher so unfortunately situated owes it to himself as well as his pupils to try and better the conditions. If our correspondent has so strong a popular hold upon the community she ought, if possible, to be teaching the people to have a higher regard for her ability, in order to hold the situation in her control, for as a general rule in such cases there comes a time when a certain portion of the community will be willing to pay more, and will do so to some new comer. It may be difficult and perhaps impossible at the present time. If such is the case, this teacher and all others similarly situated deserve the encouragement and sympathy of their more fortunately placed brothers and sisters.

As to starting afresh in a city, it would be impossible to give advice. It is not wise unless the one making such a start has some capital on which to begin, usually enough to keep one a year and sometimes longer. It is often a very slow process making one's way in a strange city, especially if one has no friends to help smooth the beginnings. Unless possessing both capital and friends it would probably be better to make no change. In starting out in such a manner one needs to have well laid and definitely understood plans. Many are striving to gain a foothold in the large cities, and many meet with but sorry success. I have seen statements of well trained musicians in New York City, who, either from lack of

influence or the necessary business ability, were leading lives of the most distressful poverty. Before making a change of any kind it is always well to take a thorough inventory of one's stock in trade, and in music teaching this consists in a series of special adaptations as well as musical education. A laudable ambition backed up with insufficient knowledge and understanding of difficulties to be encountered often leads one into troubles practically insurmountable. Life's problems are difficult of solution, and generally have to be worked out with fear and trembling by each individual, little aided except by what influence can be found near at home.

FROM OVER THE SEA

T. L. RICKABY.

I received recently an English magazine. Among other things was what I supposed to be one of a series of articles called "Life's little mysteries," dealing in a gossippy way with many little peculiarities of things and people—people mostly. One paragraph especially interested me. It was entitled: "Our pretended liking for music;" and I take pleasure in laying it before the readers of this magazine.

"Why do we all pretend to like music? If we have daughters we force them to learn the piano, though they do not want to learn it, and we ourselves find the house unbearable when they are practicing. If a friend calls on us, who has no voice, and hates to display it, we, who suffer grinding torments when she attempts to sing, insist that she shall sit down to the piano and sing. We even go to the extreme hypocritical length of telling her how beautifully she sings, and begging her to sing just one more song. Perhaps we are capable of giving a musical evening—for this kind of crime is prevalent even among otherwise good and kind people. In that case we get together a dozen or two friends, and then proceed to make them and ourselves wretched for the next two hours with songs and piano playing, which loosen the back teeth of the family cat. And when the hours of torment draw to a close, we all answer each other that we have had a delightful evening, and that there is nothing we enjoy so much as music. Now there is no law that requires any man or woman to undergo music if he or she has a sane, healthy dislike for it. Why, then, do we all submit to music, and what is worse, pretend to like it? Next to the hand organ, the piano probably produces more acute suffering than any other instrument for the dissemination of noise, and yet there is a piano in nearly every house in the country. The young people who practice their scales and exercises abhor the piano, and we who listen to them wish it had never been invented; but still we continue to buy pianos, and to pretend that we delight to listen to all sorts and conditions of players.

We are not hypocrites in other matters, but in the matter of music, we are profound and persistent hypocrites. Instead of saying frankly that we can tolerate certain kinds of music, we pretend that we like every variety of hideous sound which is made in the name of music. I wish I knew why all men, including myself, thus shamefully wallow in hypocrisy."

The writer was probably dyspeptic, but then again, he probably was not. No one who reads the paragraph carefully can fail to see that much of what he says is *true*. The great trouble—the root of the evil—is that not only in England (I lived there twenty-five years and I know whereof I speak), but in America, there is entirely too much singing and playing of such an abominably poor quality, that it is no wonder that now and then some one does bob up (though not serenely), and, Carlyle like, denounce the whole proceeding—the good with the bad. And back of the existing fact—the cause of it—of so much poor performance lies the fact that entirely too many study solo work instead of music; and of those who do take piano and vocal lessons, the majority are not gifted in any way with real musical receptiveness. Yet they "take lessons," and of course must do something to show that they have studied. So they sing and play, and play and sing, and we listen, and because they are friends of ours, or friends of our friends, and we are good natured, we praise their work and pretend to like it, and everything else in the way of music.

This state of affairs may be remedied in time. One step towards it would be for teachers to discourage solo work where such work cannot but result in failure, and advocate instead choral practice or the study of musical theory and history—biography of musicians, the invention and development of instruments. Another step would be to regulate the indiscriminate distribution of diplomas and medals. But who will take this step? Parents ought to, and the state and national associations might grapple with it to some advantage. There could, with much benefit, be less exploitation of fads and "only methods" which trap the ignorant or unwary. Under these reforms we would have much less playing and singing, but it would be of an infinitely better quality.

Notice our British cousin's way of speaking of the piano. "Next to the hand organ the piano produces more acute suffering than any other instrument for the dissemination of noise." Allowing for the somewhat whimsical way of expressing it, is the writer not nearly right? There is not a piano teacher in our broad land who will not agree with him. Young ladies, otherwise gentle and distinctly feminine, will pound an unoffensive piano till the bric-a-brac shakes, hitting many wrong keys in doing so. Is it any wonder that sometimes the worm will turn—that sometimes some one rises up and says, "Vanity of vanity, all music is vanity?"

The remedy for this lies chiefly with the teachers who ought to do more towards developing a taste for *musical* playing as opposed to noise and rapidity. The artist who, in a mad struggle with the "Don Juan" Fantasia, springs eight or ten inches from the piano stool and finishes the performance (capers I call it), with his long hair hanging all over his face is no model to follow. Why antics, which would elsewhere cause a man to be jeered at, should be considered worth copying in piano playing, is more than I can understand. Swaying of the head and body, throwing the arms and hands, and similar movements all tend to piano "thrashing" rather than piano playing. And it is such piano pounding that causes our English friend to pour out the vials of his wrath upon the whole piano playing fraternity.

As to the hypocrisy, that arises from our colossal good nature, and patient long suffering; although so-called "society," is full of just such hypocrisy in other things than music.

People really like music—when it is well done, when it is natural, melodious, and when there is not too much of it. I am inclined to think that one reason why music is not appreciated in many quarters is because it is too often *thrust upon us* when we do not want it and when it is really inappropriate. I have been to many "functions" when music was decidedly out of place. Nothing could be more incongruous for example than to have a piano solo sandwiched in between a paper on "weed extermination" and an address on "new methods of fertilizing." Yet I heard that combination at a recent Farmer's Institute. School teachers have conventions and institutes and other gatherings, and while it might be expected that they might have greater appreciation of music than farmers, still, solos sandwiched in between essays and discussions on "geography" and "methods of teaching civil government," are apt to fall short of their proper effect. At all such assemblies, and at socials, parties, receptions and other similar affairs, music is not an absolute necessity, although it is invariably "lugged in." Because music is delightful to a few and a pleasure to many, is no reason for its indiscriminate use. As well might we reason, that, because water is delightful in certain ways, a man must have the hose turned on him wherever he goes. A number of people *do* take much delight in music, our English friend to the contrary notwithstanding. When a number of such people assemble to listen to good music, adequately performed, there is no hypocrisy in their expressions of pleasure. And when the time arrives when we will have less solos and more music, and have it done better, and in its proper place and under auspicious and fitting occasions, fewer people, like the writer quoted, would feel impelled to rise up in their righteous indignation and protest so vigorously. At the present I do not blame them much.

In playing in public it is wise to select only works as have become easy. It is always better to play an easy work well, than to give a poor performance of a more difficult one. If this is followed, much of the nervousness and stage-fright would also be avoided. I would advise all musical students not to neglect their general education by giving all their time and life to the material study of music only. In a wide knowledge of sciences, arts, literature, languages, etc., much will be found of direct and indirect help to the better study of musical art. No pianist, for instance, can doubt the great advantages derived from the study of the theories of vibrations and upper-tones as explained by Helmholtz.

ABUSES OF MUSIC.

PAUL G. CARR.

The recent styling of rag-time as "unmusical rot," and the many scathing denunciations that fill the pages of our musical journals, are calculated to awaken the query in the minds of the unenlightened, as to whether these utterances are the result of judgment or of prejudice. The narrowness and intolerance that too frequently form the dominant chord in the specialist, are no less prominent in the musician than in others; the result of which abnormal development being frequently to dwarf and impair the powers of generalization; to cramp the ability to look broadly and generously at life from its multifarious points of vantage.

Music has its mission as truly as religion, and there are various forms necessary to its propagation, as there are numberless creeds required to meet the temperament and capacity of the devotee. If the spirit of worship speak to the soul through the crude instrumentality of the Salvation Army, with its "gutter band" and flaring hats, that soul is no less a witness of the spirit than the one who bows at the altar of the ritual church, with its pipe organ and choir of artists, and its solemn service.

If the intricacies of the great Wagner are too subtle to gain an appreciation of their heavenly harmonies in the average mind, where lies the harm in deriving enjoyment and even inspiration from less scientific compositions? The human mind is of various degrees, as there are corresponding degrees in music.

There is no element of intellectuality in the enjoyment of rag-time. It savors too much of the primeval conception of music, whose basis was a rhythm that appealed to the physical rather than to the mental senses; yet these simple, syncopated melodies, with their harmonious blendings, viewed simply as *tunes*, so to speak, resolve into nothing more than a pleasurable pastime. It is by the addition of words that this grade of composition receives another signification—words that are halting in morals and measure—and that render them not only inappropriate upon most occasions, but highly improper. This recent and odious innovation of suggestive and insinuating words attracts a cheap notoriety at the music hall through the interpretation and personality infused into them by some so-called *artist*. I use the word advisedly. Through this instrumentality, the *music* receives the stigma of "unmusical rot," when as a matter of fact, the aspersion should rest upon the *lines* as *unpoetical decomposition*. The department stores have so flooded the country with editions of this class, as to literally force people to become familiar with these objectionable features. It would seem, therefore, that the writers of rag-time are deserving of censure for becoming partners to so degrading a combination.

While rag-times, with their uncouth belongings, are lowering a few of the pristine ideals of the ethical import of music, scientific music is being made the foil for a greater one of society's shortcomings. It is doubtful if our recent roof gardens and music halls, a la European, would not soon sink to the level of the low class theatres, and cease to receive the patronage of the better class, were it not for the distinction and seeming prestige afforded such functions by the high grade musical program that is rendered so well as to drown the rude accompaniment of champagne corks and the gurgling of wine; to wrap the cloak of approval about the jeweled bedecked dames and fine gentlemen who comfortably sip their favorite cocktail, in their ostensible enjoyment of the classics.

In the heart of every creature there slumbers a native reverence that responds to the sound of music; it subdues the baser instincts, and exalts the soul to a close communion with a higher life, creating a mute appeal for help. In view of this latter-day decline in reverence for sacred things, together with a glance at the endless results that grow from every cause, it would seem that this God-given power of music over men is of distinct ethical value, and that a distinct responsibility rests upon every musician.

Besides the regular work of preparing the lessons, the student should give some of his daily time to reading music at first sight. For a piano student an excellent method is to read good arrangements of standard symphonies and other orchestral works, operas, etc. This will not only help to improve reading, but it is also a nice way of getting acquainted with these musical gems. The practice of accompanying songs and other instruments is beneficial, and that of ensemble playing and chamber music most necessary.

Expert Opinions

Anent "A Critique and Some Comments Thereon."

Art and Business.

With this issue we present two articles on Musical Criticism and one on Art and Business. These subjects have had a fair and comprehensive treatment in the series of articles of which these are the last. In view of the importance of the subject, we will be pleased to have our readers give their opinions. There is so much to be learned in discussions of this sort, and one is so greatly benefitted by crystalizing his thoughts that we hope teachers will give this suggestion consideration and will send us the result of their study.—Editor of THE MUSICIAN.

"A CRITIQUE AND SOME COMMENTS THEREON."

Editor of THE MUSICIAN.

Your courtesy in submitting proof of the article by Mr. Rickaby on "A Critique and Some Comments Thereon," is fully appreciated, and I am impelled to accede to your request that I add a few further comments upon a condition of musical appreciation which, I regret to say, prevails in many places. The question involved is purely one of "appeal and response." What is caviare to one is delectable sweets to another, depending entirely upon the condition of "de gustibus non est disputandum." To put it in idomatic expression—what is one man's food is another's poison.

The real question—and one of vital importance to artistic evolution—is comprehended in the proposition as to whether the public press is to be considered as an educational factor, or merely a purveyor to public amusement and gossip. The real province of a newspaper, to place it in its proper attitude towards the public, is to make it the medium of improvement and education. From the standpoint of art there can be no argument upon this point, and those who stand for the highest in art have but one mission in life—the adequate presentation of the art they represent, be they creators or interpreters. Art culture is purely a matter of evolution, involved in cultivation and an artistic environment. The attitude of an artist towards the public is an enigmatical one and resolves itself in a question of art representation or commercial returns—a question of the studio versus the box office.

Art for art's sake has not yet been admitted to our public creed, and until it is we will be compelled to read, for long, in public print such effusions as were included in the article referred to as our text. Outside of a few of our metropolitan cities there is no such thing as criticism in the public press. The art department is run upon the same principles as the patent medicine advertising department—purely a source of revenue. Gossip, and that too often of the scandalous sort, is the pabulum which the people are fed upon. What comparison—in public interest—is there between the inspired playing of a Paderewski, and a brutal exhibition of prize fighting? One has but to compare the space devoted to each in the public press to draw conclusions. There is no doubt but that the mass of people are more interested in the latter than the former. But how are the masses to be educated to an appreciation of purer and more æsthetic things unless methods of education are pursued by those who pose as public mentors.

In a city of such importance as our own the office of musical criticism is placed in the same hands as the society notes and gossip.

It is only recently that, in a notice—I can not dignify it by the name of criticism—of an important concert, the Mendelssohn concerto for violin was designated as "a beautiful thing." The recognition of its emotional qualities was somewhat in evidence, but the terminology was, to say the least, unfortunate. From the art standpoint the artist is an educator rather than a purveyor to simple amusement or entertainment. To an educated person art itself or its representative is an entertainer, but to those whose art perception and education is undeveloped an art representation should be accepted in the light of its educational advantages. In our country, generally speaking, the commercial instinct is so much in evidence that concerts, classical or otherwise, are looked upon as sources of entertainment rather than expositions of art, and the artist is too often judged by his entertaining qualifications rather than his ability to subjectively present art productions.

The public must be educated to a proper art appreciation, and how can it be done better than by lucid criticism, explaining first—the art work presented, its scientific structure and emotional content, and the special method adopted by the artist in its presentation. We have educated the public to an appreciation of objective piano playing, but it requires something of analysis to explain why subjective playing is of a much higher art grade than a style exploiting solely the executant. I am glad to say that of recent years, thro' the playing of Paderewski, de Pachman, Hofmann, Bloomfield-Zeisler, Sherwood, Gabrilowitsch and others of their school, the subjective phases of piano playing are receiving just recognition. The tendency of the times is to revert to the Mozartian style of music, wherein pure melodic inspiration is of paramount value rather than pyrotechnical display. The fact is, that only a genuine artistic temperament can adequately present a simple composition in a manner to win respect for the pure and simple in art. How many virtuosos—I use the term advisedly—can sing for us an andante or adagio of Mozart, or clothe in its profound emotion a largo of Beethoven? In a Liszt paraphrase they might shine resplendent. It is the same old question of objectivity versus subjectivity. And after all, how rarely is the latter mood found in the horde of piano agitators that visit our shores as the Eldorado of commercial success. Journals like THE MUSICIAN are doing an immense amount of good in art education, but unfortunately their influence is limited to the class seeking enlightenment. To reach the masses other avenues must be opened, and the daily press is the proper agent to be employed in spreading a general culture. Some of our most progressive papers are issuing literary supplements to the great good of cotemporary literature, and I hope at no distant day in the future to see a similar course adopted to exploit music and the kindred arts. The chief point of criticism I make against artists is, that they adhere too much to the same programs. It seems as tho' each one arranged his programs to show how much better—in his own estimation—he could play them than any one else. There is always a happy medium in all things, and if programs could be arranged so that a few numbers be devoted to selections from the best class of salon music (so called), the way to the high-art Parnassus could be made somewhat easier. The true way to a musical education lies in appealing to the emotional qualities of your audience, and how can it be better accomplished than by elevating their taste by the means of the semi-classical rather than the ultra-classic. It is not necessary to degrade art, or lower the dignity of the artist. I can not understand why artists persist in giving us a surfeit of the last sonates of Beethoven when so much of beauty, and clarity of expression is to be found in his earlier works. There seems to be a prevailing notion among musical fadists that only the turgid and opaque is worth their consideration. How many programs do we see exploited, among the esoteric circles of musical fadism, of heroic doses of the ultra-Russian (and other ultra-schools for that matter) when Mozart, Schumann, the early Beethoven, and other worthies in our art, would present problems of analysis difficult for them to appreciate. There is altogether too much fadism in art culture in our country. It is impossible for genuine art to thrive when music becomes merely a fad or a function, and I am sure that I am not indulging in fiction when I say that this condition prevails to an alarming extent. The eternal hustle after the almighty dollar breeds an atmosphere that does but stifle art. When society looks upon an artist merely as a medium of entertainment and opens its door to him to serve only in that capacity, there cannot be much good accrue to art. The fact is that true art appreciation seldom finds a home in the so-called "upper set." The creation of a Beethoven pales before the latest invention of their *chef de cuisine.*

Fortunes are too easily amassed here to bring with them genuine culture, and the second generation is too busy spending the accumulation of their fathers to find time to devote to higher culture. It is from the middle class that the sinews of government come, and the same can be said of art production and appreciation It will take many years of effort for the cult of higher education to find habitation where the law of the survival of the fittest seems to regulate our actions. When artists are exploited by methods invented and utilized by Barnum it is not to be wondered that the public look for transcendental and super-human exhibitions. No artists are advertised as art representatives pure and simple, but each one is a shining comet in the shadow of whose tail all others must sink into insignificance.

When an artist is damned or praised according to the piano he uses, how can we blame public misconceptions of art? Pianistic art is too much the medium of speculation here to gain a firm foothold, and until artists are relegated to their true position—as expositors of art, rather than freaks—there will be but little good come out of Nazareth. WILSON G. SMITH.

Editor of THE MUSICIAN.

"A Critique and Some Comments Thereon," reproducing a column wail of the editor of a paper in a town of five thousand inhabitants, who complains that the selections performed at a concert given by the local chorus, were away "over the heads" of the audience and that the people felt swindled because they did not get value received, is quite interesting in that it shows the attitude of a certain element of the community towards classical music.

From what we can gather from our rural editor's comments, his idea of what the program of a concert should be, is based the sort of a program which is dished up by a traveling minstrel company, the "musical team" of a variety show, or a burlesque aggregation. In performances of this kind his ideas are carried out to perfection. These people know their business. They know perfectly well that the golden stream which runs into their box office windows comes from just such leather-eared individuals as our editor. They know better than to play above the heads of their audiences. There our editor could hear "Money Musk" and the "Virginia Reel" performed on a cigar-box fiddle, and his ears would not be tortured by Chopin numbers on the piano. If there was any piano playing at all, it would be of the "Blue Danube" order so much admired by the editor, or else rag time. The singers also would scrupulously avoid any of the florid execution so obnoxious to our critic and would confine themselves to such gems as "Hello, Ma Baby," "Get a Coon Lady of yer own," or else to mawkish ballads of the "Berceuse," or the "Girl from Sunny Tennessee" type.

As we understand the matter, the concert was given by the Choral Society of the town for the express purpose of raising the standard of music in the town and of giving the members of the chorus and the audience a chance to hear something of a little higher order than that heard in a ten cent variety show. Suppose the selections performed had been of a light, popular "Old Folks at Home" order, the people would have been disappointed, and the editor would have been the first to have noticed the incongruity of a society giving a concert to elevate public taste, and then giving the people nothing but "popular" music.

A large amount of our editor's article is probably intended to be humorous, as he indulges in all the old time flings at classical music, which have become as threadbare as those about the goat eating tin cans, the mother-in law being blown up with dynamite, and the policeman stealing bananas off the corner fruit stand.

The only thing the critic liked in the concert was the choruses (no doubt he felt compelled to say this, for fear of losing too many subscribers out of the chorus). The violin playing offended him because the soloist played high notes, and played a piece with fast passages. He thereupon lays down the rule that the "violin is not adapted to extremely rapid playing," and that upper notes should not be used because they are "squeaky."

Think of a man who could write rot like that being allowed to get his ideas in print. The fact of the matter is that the violin is the one instrument of all others which *is* adapted to playing extremely rapid passages,

and as for high notes, nothing more beautiful or ravishing can be imagined in the hands of a good artist. If this critic had his way, I suppose the glorious Mendelssohn Violin Concerto and the Overture to William Tell would have to be rewritten so as to cut out all the high notes and fast passages given to the violin.

Our critic next discovers that Chopin is not popular as a composer for the piano. What shall we do with a man who makes an imbecile break like that. The plain truth is that nothing in the whole range of piano classics is so easily understood by the average uncultivated listener. The proof is the world wide popularity of Chopin's compositions for the piano. They are so popular that even the hand organs play them. We next learn from our musical "Daniel came to judgment," that singers must confine themselves to simple music ballads, etc., on the grounds that trills, scales are unmeaning and not suited to the voice. Our editor should notify the police of New York city how the singers at the Metropolitan Opera House are humbugging the people, and cable Patti that she must cut out all trills, scales and vocal embellishments if she would truly please her audiences.

This editor is one of a large class which attends concerts given expressly for the purpose of performing compositions of a higher order, and then goes home and complains that the selections were not those of the variety show, beer garden type.

The enormous advances which classical music has made in the United States in the past twenty years is due to the refusal of most of the world's great artists and of many of America's conductors—all honor to them—to give the mob nothing but what it could "put its foot" to and whistle as it left the hall. I feel like lifting my hat when the name of Theodore Thomas is mentioned. He was the pioneer of the classics on the American concert stage, and has stood like a rock for the performance of the best and most rigidly classic in music, and has let the clamor for trash surge idly by. He and others, artists and conductors have won the battle, too, for in our larger American cities at least, the people can now hear the classics performed in artistic style.

If a literary society in our editor's town should bring a dramatic company to perform a tragedy of Shakespeare's, we have no doubt that he would write a column to prove that Shakespeare "bores" a mixed audience, and that the company should have played the "Katzenjammer Kids" instead. ROBERT D. BRAINE.

HOW CAN THE CONFLICTING CHARACTERISTICS OF ART AND BUSINESS BE HARMONIZED?

ADELE LEWING.

A discussion of this question—abstract in nature as it is—must, to a very large extent, be academical in character. For practice every artist must find the answer for himself. Carl Schurz once answered a long letter of a young friend of mine, asking general advice as to what profession a young man should adopt, by writing: "Show me the young man!' Similarly no practical rule can be framed which, without a special adaption to the artist's circumstances and characteristics, will serve as a sure guide to him who, on the one hand would follow the dictates of the feelings which speak in behalf of art for art's sake, and, on the other hand, is forced to listen to the demands of business consideration which, by their compulsion, keep a damper on the spontaneity of art.

And yet, while the practical here, as it always does, fails of any hard and forced rule of faith and beauty, it is necessary that the artist reason out the matter, find a rule and fix it in his mind as the ideal to furnish the preferable guide of his actions. The problem is that of the "practical idealist," so beautifully located in the "Hon. Peter Stirling," with reference there to the vicissitudes of public life.

I might take as the text from which to develop my argument—if I may call it such—the noble sentence: "Res severa verum gaudium," whose solemn greeting at the entrance of the Leipzig Gewandhaus all will undoubtedly remember. If I may be pardoned, a free translation: "Faithfulness to Art is genuine joy." How many young disciples may have been inspired by it to follow Art as a profession and the prohesied joy grew so intense that hunger and thirst, for science, often overcame those for bread and drink? How many great musicians of the past have suffered from want of means? And had it not been for the fire of genius, which warmed them, they might not have endured the freezing cold of life's privations. Was it, perhaps, that they were so little fitted for practical life, not knowing the value of money? Was it that their genius was duly recognized after death? At any rate, the problems presented by the conflict of Art and Business was present and unsolved.

The *modern* world from year to year improves in all things practical, but the traveller along the road of Art still finds it rough and dangerous, at places as steep and precipitous as ever. Idealistic as are his views, though obliged to live and struggle in a materialistic world, nobody suffers more than the artist, especially the sensitive musician, in the conflicts between art and business. We all abhor the money question, and yet we cannot ignore it; to live, we find it impossible to serve Art for noble Art's sake alone. Short as the American season is, generally lasting not longer than six months, whence may we derive the means of livelihood for the rest of the year, to purchase food, clothes, help to keep up good courage during the hot summer months in a sweltering noisy city, or to permit a summer vacation in the country?

"Handwerk hat einen goldenen Boden," or to be more modern: "Manual labor always has a market value." Art and music in America are unfortunately not so advantageously rated from the fact that they are regarded as the most unnecessary of luxuries, the very things one can do without. While abroad no fine education is regarded finished without it. No laborer works without fee, but the musician, the ideal workman has so often to waste his talent for mere "glory." People do not think a moment of his many years hard study, the amount of energy, time and money spent with great masters, and the tuition of the latter often only acquired by greatest denials of the entire family. Unpractical, kind hearted and good natured, as the musician generally is, he cares not for money, it means little or nothing to him. If he has it, he spends it freely. "Art for Art's Sake" is his motto. Serving the holy priestess in fervent blind admiration and enthusiasm, people make use of him whenever they can, his only reward often a pack of cheap compliments Does not good remuneration seem proper when we educate people's taste, introduce them into the ideal spheres of lofty, holy Art?

Let us make a difference in the class of people we have to deal with, as also other professional people do. If you receive heartfelt hospitality at friends' homes, always let your Art appear as a friend in a generous way. Treat a poor, but talented scholar richly, namely for Art's sake, and be generous when a noble cause presents itself—but from people able to pay—demand your fee. We must make a difference between Art and business and keep them apart. Then they will work harmoniously.

With how much zeal, ambition and fervor one works if one's endeavors are recognized. In order to become a successful musician one must develop the genius, and in order to make a financial success one must save from the idealistic in favor of the practical. Therefore, respect your own Art in order that you may influence people to respect it like any other profession. Keep both sides strictly apart and do justice to both. So that after years of hard work and struggle and due recognition of your Art when finally enjoying the victory, you can serve Art for Art's Sake alone. Let us emulate the glorious example that the noblest of all teachers, Franz Liszt, has given us, whose fortunate circumstances enabled him to give his services without remuneration to all his pupils, regardless of rank and position. What a noble and living monument he erected for himself in the grateful hearts of his numerous pupils all over the world! Let us follow his high example and after we have triumphantly gained the victory of the idealistic world over the materialistic by means of honest endeavors, serve Art faithfully for noble Art's Sake alone *at last:* "Res severa verum gaudiums."

Efficiency, in technique especially, can only be accomplished by hard labor, and naturally the more one works the better it is. Eugen D'Albert said once that he thought for a talented student two hours and a half of daily practice should be sufficient. Anton Rubinstein made it his own duty for many years to practice five hours a day. We heard that Tausig was found more than once lying on the floor under his piano, exhausted from overwork. Then, again, other artists seem to do wonders without working so hard. I remember, during my tour in America with Ysaye, I once heard this great violinist play, most divinely, a concerto he had not played for the previous three years, and that after not having touched his violin at all for nearly two weeks.—*Sobrino.*

"WHAT ARE YOU WORTH?"

FRANK H. TUBBS.

Music and its votaries are in a peculiar position today, because of the extraordinary business conditions of our country. It is very commonplace to speak, even, of unbounded prosperity. While we are passing through these years, music, as a profession is sure to be pushed one side. Young men see so many opportunities for business that to enter music seems absurd.

There are those who are so strongly influenced by their love of music that they must be at work in it and no business can attract them away. Those of us who have used the better part of a life in professional music, could not be driven out of it. The new men coming in, and the older men already in, need to study the conditions anew, which will make or unmake them.

Worth tells. That which has merit will eventually be accepted. The price of goods may go down, but if the goods are right and are wanted the price will come up. A musician who has something unusual and which is of worth will be discovered. He must use means to keep himself seen or talked about, for miners after musical wealth do not dig deep. But the basis of success in music in the next five years is worth—real value, without garnishing or setting. The man who hasn't that stands a poor chance now. He who is uncertain what he is worth would do well to take stock in trade. If what he has considered good stock proves to be shop-worn or worm-eaten he would better throw it all away and get new stock. Our readers know that optimism rules these columns, and while the above does not hold up a glowing picture of musical prosperity, it is the best optimism which brings us face to face with problems which we must meet. The problem before us this year is evident. The prosperity of the country will stand against large business in the professions. The doctor will have few patients, because people are too busy to think themselves sick; the lawyer will not be called upon to settle differences while things are rushing. There never was a big revival in the churches during "good times." It is, however, the best time that can ever occur for the professions to see where they stand and make themselves ready for the reaction in the whole business fabric. Since the days of Pharaoh, there have been fat years and lean years and there always will be.

How can a musician take account of stock? His waves are in his soul and head. They are not so evident and to be counted as are barrels of flour. Here are a few questions:—Am I a gentleman of culture? Genial and social? Sympathetic and kind? Have I appreciation of beauty and refinement? Of art and the science under it? Can I meet men and impress them well? As a teacher can I get results? Do I get the most out of my pupils? Are they advancing into better positions? Am I doing good in the world? Is my object in living to do good? He who can, in the honesty of his own honest heart, give satisfactory answers to these and similar questions is well stocked. He who cannot should repair himself. Only the best in the profession will be able to stand against the conditions of social life immediately before us.

NERVOUSNESS.

J. CUTHBERT HADDEN.

So far as the player is concerned, the real cure, when a cure is possible at all, is solid technical skill. The more thorough the mechanical ability, the less chance is there of becoming nervous from fear of certain great difficulties which might be in the way of an absolutely safe and sure rendering. Ingenuity of fingering has a great deal to do with this safety of execution. There is scarcely a passage, no matter what its difficulty, that cannot be made easy, or at least sufficiently easy. And one must be prepared *beyond* perfection, if that be possible. Of course, when the trouble comes entirely from the player's temperament it is a much more difficult thing to cure. Nay, one may almost say that a cure is impossible. There may be amelioration, but so long as the sensitive, self-conscious organization is there, so long will a certain measure of nervousness continue. After all, there may be compensations even in nervousness. There are mechanical performers who, by dint of great technical labor, present to the public versions of compositions with machine-like accuracy, unilluminated by even a glimpse of intellectual appreciation of the composer's thoughts. But such people are not nervous. And herein is the lesson of compensation.

Young Composer's Column.

RULES.

1. MSS. marked "Young Composer's Column" must reach us by the 10th of the month to ensure notice in next issue.
2. Each MS. must bear the full name and address of the writer; the initials will be used unless a *nom de plume* is added.
3. Stamps must be enclosed if MS. is to be returned, but it is to be distinctly understood that the Publishers assume no responsibility for any MS.
4. No charge is made for the examination of any MS., and compositions of any nature may be submitted. The criticisms will be general and of such a nature as will be helpful to those honestly desiring frank and unbiased criticism.
5. No criticisms will be sent through the mail.

I. K.—(424). "My Mother" has a pleasant melody and is, if we understand your age correctly, much to your credit. In making your manuscript do not join the stems of notes that are sung to different syllables; on the other hand, when two or more notes are sung to one syllable, join the stems and use a slur. It is unusual to end a song in some other key than the one in which it was begun; on p. 2, last line, second and third measures, also the fourth and fifth, you have consecutive octaves between melody and the bass of the accompaniment; in p. 3, second line, fourth measure, the second and third beats in the left hand are incorrect; you would do well to alter the introduction to your song. It is not at all satisfactory. Shall we not have something else from you before long?

F. L. G.—(442-444). You always send us a beautiful MS. Thank you! "Let Silence Fall" is a *musical* song; we do not think it is remarkable, but it is grateful to the singer and is effective; it will give pleasure when well sung. We think you should consider these two points: first, change the 2-4 measures into 3-4; second, begin each time with A♭, D♭, E♭, F in the melody instead of four "F's". "Sittin' by the Fire" is thoroughly practical, but you ought to make it livelier and put more pepper in it! There are too many holds and you manage them in such a way that the accent comes on the last syllable of "Maria"; in the 4th line, 2d measure, B♭ should be written A♯. "A Dream" is thoroughly musical; it will be found to be very delicate in sentiment and very expressive when well sung. You must keep on writing until you get beyond where you are now; you must have more in your themes, they must mean more, you must dig deeper. Do not, however, lose your naturalness. Be yourself. We consider you a person of a good deal of talent.

H. A. W.—(445-455). Your modest letter says: "I wish a hard criticism on my pieces; please select those which have most merit; that is, if any of them have any merit." We pay you the compliment of thinking you an earnest man to whom his weaknesses are hateful. To criticise all eleven pieces would take a couple of pages of THE MUSICIAN; we therefore select "The King of Love," "Communion Service" and "Six Piano Pieces." The opening phrase of "The King of Love" is strong and tuneful, as much so as anything you've written, but the rest of the song is either unattractive or else made up of time-worn phrases; we puzzled some time over your B♯, 2d measure, p. 3, until we discovered that it ought to be C♮. On the whole, the song is theatrical and not a good *sacred* song. The song illustrates one of your great faults, viz., the fault of depending too much on the harmony and the accompaniment for effect, instead of making your voice part interesting in itself; you will not agree with us now, but think about it for a year and then you *will* agree with us. Your "Six Piano Pieces for Young Players" are dry, discordant (in the popular sense) and wholly unsuitable for their declared constituency. "The Spinning Wheel," for instance, is harsh, even to older ears attuned to implied seventh-chords, passing notes, suspensions, appoggiaturas, etc. Your talent lies in other directions. The responses to the Commandments are smooth and melodious. The Creed is disjointed. There is little unity in it; often it is dramatic; that you have, practically, no contrapuntal power is shown by the *fugato* passages on pp. 10 and 11; you have several times a horrible progression of the dom. 7th chord, wherein the seventh (in the bass) rises a perfect fifth to its resolution. Do not make the error of supposing that the rules of harmony have no real foundation and that anyone may break them without peril. Your ideas of notation are faulty; you spell your chords, especially the one known as the aug. six-five chord (German 6th), wrong; in single notes, too, you are often curiously wrong, as in meas. 4, p. 18 (Agnus Dei). The first four measures of "Gloria in Excelsis" are bright and tuneful; why don't you do it oftener? In general, your themes lack attractiveness; some people might put it that you lacked originality, but we do not think so. What could be less pleasing than the first principal themes of the "offertoire" for the organ or the "concert overture"? You must make better themes; they must be beautiful in themselves; do not depend so much on the harmony and the accompaniment; that is the reason your songs are not attractive. No singers would care for them.

Let us now turn to the brighter side of the picture. You have a good, natural taste for harmony and for poetic and dramatic effect (see the end of "The King of Love," the lovely opening harmonies in "Agnus Dei," the passage on p. 24, meas. 2 to 5, with the highly interesting and unexpected chord of G major at the end, etc.). Your facility is unquestioned; you seldom repeat yourself; your power of construction, we think, is excellent. We take it that you are practically self-taught, and we think that if you will study counterpoint and musical form earnestly for a couple of years, bearing in mind what we have said about the beauty and attractiveness of themes, you will do some things that the world will not willingly let die. We have written more freely than we would have done had you not invited it. Let us hear from you again.

J. P.—(457-458). If we could combine your tunefulness and *H. A. W.'s* general ability, we should have a good composer already for business! The slumber song is pleasant; you would be surprised to know how naturally our "Young Composers" take to slumber songs; some of them are better than yours, too; we are very much pleased to see that you employ a dom. 7th chord over a tone pedal (meas. 46); that shows you are getting sophisticated. "Shepherdess" is really quite original; but do you mean the 5th note in 5th meas., line 3, to be A♯? Line 4, meas. 3: make the C♮ into a B♯. You have distinct melodic talent.

M. A. N.—(459-461). You are not as brave as *H. A. W.*, for you say, "The MSS. I submit to you with fear and trembling; yet what I need and most wish is your criticism—aye, though it may hurt." "The Message of the Bells" has a very pleasant tune, founded on correct harmonies; it is not an elevated or distinguished melody; just a simple, homely one, such as a mother might say to a child in the twilight. On p. 5, meas. 2, the harmony is poor on the words, "hour on the". Find a piece with the key signature of 5 flats, then look at the way you write the signature in "Palm Sunday"! In this song you have the same artless type of melody; it is "catchy," too; you have been consistent in your accompaniment and that is to your credit; from our point of view these are not, really, good sacred songs. There is an intrinsic incongruity between words and music; the words are solemn, tender, impressive—the melody is facile, artless, ingenious. In "Jesus Christ, Our King," 2d meas., you have written E♮ for F♭; we like this song least of the three; the general effect of it is much more ordinary, though the phrase, "Glory to God," p. 2, meas. 1-4, is fine and strong. In general, we may say that you have a real gift for melodizing in a way a trifle superior to the Moody and Sankey way; you have an excellent feeling for rhythm and the effect of the whole is distinctly musical, in the simple sense of the word. If you could associate with some good musicians for awhile and hear some music of a distinctly higher order than your own you would grow, we are confident.

E. S. D.—(456). "Morning Prayer" is not free from errors in harmony; the last eighth notes on p. 1 cannot be harmonized correctly on B♭ for a bass; the first meas. on p. 3 has awkward 6-4 chord on the word "what"; you have consecutive fifths between sop. and bass in the next to the last measure; don't think that every melody note must have a harmony—that the melody notes sometimes as passing-notes or as appoggiaturas, etc. You have a good deal of talent, and if your melody was harmonized by a good musician it would be effective.

EXTRACTS FROM RUSKIN ON MUSIC.

Notes and words are its implements (music's) and must have their all-important value, but the deeper meaning *may* be understood by one who practically could not use its implements.

What is to be admired in what he (Ruskin) has said of the art, is the beautiful way in which its spiritual meaning and teaching has been expressed by him in the short passages which he has devoted to it, and in which no one has ever excelled him.

He tells us in *Modern Painters* that: "The critical and executive faculties are, in great part, independent of each other;" so that "it is nearly as great an absurdity to require of any critic that he should equal in execution even the work which he condemns, as to require of the audience which hisses a piece of vocal music, that they should instantly chant it in truer harmony themselves."

Questions Answered.

[Under this heading THE MUSICIAN will be pleased to answer any questions submitted by its readers which may be of general interest. *All questions must be accompanied by the full name of the questioner.* Answers will be published without such names. Those who send questions should take care to state clearly what information is wanted. Only such questions as will be of interest to general readers will receive attention in this column. All others will be answered privately, for which purpose stamps should invariably be enclosed.—ED.]

H. M. C.—As every maker of cabinet organs has a different plan for naming the stops, it is exceedingly difficult to give the pitch or quality of them without knowing the particular instrument under consideration. Even then it is not always possible to have access to them. If makers would mark the stops 8 ft., 4 ft., etc., it would be of great advantage to students. The best description of such matters that we know of can be found in Sudd's "Modern Method for Reed Organ."

Minnie A.—The mark ≺ indicates an increase of tone. On a reed organ it would be produced by using the knee swell, but on a pipe organ the swell is controlled by a lever operated with the foot of the player. The accent ∧ requires a firmer tone, but cannot be produced on an organ by striking harder with the finger. It may be done by using the swell, or drawing a louder stop at that moment. The Service Preludes given in THE MUSICIAN are intended for pipe organs, but may be adapted for use on a cabinet organ. The small notes are intended for independent *pedal* notes. In "Mercedes," by Engelmann, 13th measure, the half notes of the bass must be held by using the damper pedal while the left hand crosses over the right and plays E, the quarter note. This note (E) could be as readily played with the right hand, while sustaining the half note (B).

Paulo.—Liszt frequently changes the value of a measure—say from 3-4 to 2-4, etc.—without changing the time signature. Instances may be found in his "Faust Valse" and "Maiden's Lament," the transcription of Chopin's song.

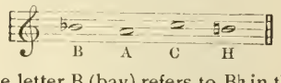
D. C. G.—While Schumann was a great advocate for using his own language to express the movements and dynamics of his compositions, he was not always consistent therein, as Italian terms can be discovered among the German, when the latter would have answered as well.

Milton.—Yes, Mendelssohn wrote a funeral march. It is one of the Songs Without Words.

Chatwin.—L'Elisire d'Amore, the opera announced in the repertory of the Metropolitan Opera Company, is by Donizetti. It is a comic opera and known in English as "The Elixir of Love." The Elixir is sold by a quack doctor, called Dulcamara, who is the *Basso.*

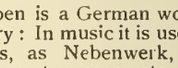
Shaker.—The old method of trilling was to begin with the upper tone, and is still used by strict players of the older classical works. However, many of the virtuosi use the modern method of beginning with the accent upon the principal (lower) tone. The modern composers of merit have so decidedly indicated this latter as the better method, that it is doubtful if the other will be revived.

Z. H.—The construction of a fugue upon the name of Bach is made possible by the use of the German name H for the sound B♮, thus:



Musically, the letter B (bay) refers to B♭ in the German language, and H (hah) to B♮.

Arno.—If a note sounded by one voice is given in the next chord by another voice—or part—and changed by an accidental, it is called a *false relation:*



Student.—Nehben is a German word meaning subordinate, accessory: In music it is used in conjunction with other terms, as Nebenwerk, Nebensatz, etc. Nasard is the name of an organ stop which is tuned a twelfth above the diapason.

Felix.—Corelli, the violinist, died in 1713 at the age of 60. His christian name was Arcangelo.

J. B.—Frederick Cowen is still living and resides in England. He was born of Dutch parents at Kingston, Jamaica. Hans Richter now has charge of the orchestra at Manchester, England, which was founded by Charles Halle.

Farlin.—Rigadoon is an old French dance of rapid movement, and generally in 4-4 time. Sometimes spelled Rigadaun.

SOME STUDIO OBSERVATIONS.

FREDERIC W. BURRY.

Patience is the will trained to rule and direct the emotions; and this is an urgent necessity for the teacher. Music is the expression of our deep emotions; these need mastering, however, before their native energies can be expressed to advantage.

The reason some teachers are not more successful with their pupils is that they fail to realize that proper tuition is really unfoldment. A teacher's office is one of guide and director; to suggest, advise, interpret, should be the work of an instructor.

Music symbolizes Life's various manifestations in more ways than one. Built as it is on periodical changes of major and minor intervals, of successions of concords and discords and, with its dark and light shadings, it shows forth in a very distinct manner the ordinary existence of man from day to day. The great masters gave vent to their feelings in their compositions; these were born of the vast ocean of experience.

Concentrated practice, that is, practice with the mind calmly centered on the work in hand, counts far more than if one's thoughts are scattered, and concentration makes practice an amusement.

For those who work there are great rewards waiting, and in no field is this so emphasized as in the realm of music. This is the art that colors existence with glorious tints, and not only awakens hopes for the future, but gives practical ideals for the present.

It is a mistake to be overwhelmed with responsibility or with the importance of any undertaking. Results are born from calm, steady action. Mastery is more allied to trustful indifference than to anxiety and care.

Almost any kind of system is better than none; at the same time one should be willing to change when any form of improvement presents itself. Laws and principle are often relative in their character and we should in no way be enslaved by them, but use them as servants.

Relaxation does not mean negligence, and strenuous action is not always productive labor. Well-directed work is, invariably, of that patient, persevering order that is associated with calmness and self-poise.

The moment one makes his mind receptive by refusing to harbor any nerve-tensioning, harrowing, fearful thoughts, fields of opportunity are opened to one's vision; ideas are then born which only need immediate application.

How much we can trace in the past to sheer laziness, failing to promptly follow certain plans. Promptness, obedience to one's ideas, which are guides pointing the way to achievement, this is the road to success.

When it is considered that all the masters had exceptionally trying experiences, we are reminded that we may, if we choose, transform our hardships into means of self-development. We may, by overcoming them, rise to great heights of character, and all art is the expression of character.

Repeated trials are often necessary in large undertakings, but in no sense are mistakes to be reckoned as so much lost ground, for every well-intentioned effort has a particular value. We can learn something even from apparent failures.

Encouragement aids development in a pupil far more than dictatorial commands. An impetus is then given to the will, a determination to excel and a desire to please is aroused.

Just at the moment when everything seems to have been done new vistas present themselves, new realms to be explored. There is nothing completed; there is continual advance; this law of progress is universal in its action, embracing all things.

It is all a matter of choice whether we are submerged by adverse conditions or use them as means of gaining added strength. We must never allow ourselves to give in when we perceive that circumstances demand dauntless action. To faint not and fear not is to reach the land of freedom.

Nothing is so satisfying, both during the work itself and after it is finished, as a task that requires one's whole and undivided attention. There is then a balance of harmony and this gives satisfaction.

Keep moving, even if only small steps are taken, for life is action, and this must lead to growth and development. Much time is lost by continually looking for signs of growth. It is not our part to worry over results; these are sure to come, if we centre our mind on our work, and let each hour mark something done, if only a little.

BEETHOVEN'S FAVORITE KEYS.

ALFRED E. BARON.

It is more noticeable in Beethoven than in any other of the masters that he had a strong liking for certain favorite keys, for he knew as no other the expressive value of each key, and chose those which most truly expressed himself in his most cherished moods.

Beethoven, it seems, always had a very strong inclination towards the "Minor Family," for out of it—the empire of grief, the sorrows of soul and mind, the terrible battle with fate, in which the individual himself only can clearly obtain victory—he has left us a large number of his most important works.

As a real favorite of Beethoven's, C-minor must be named. From the very first significant beginning of the first till deep into the third period of his creations, Beethoven has left us for every instrument one or more very important works in C-minor. The very first opus, the harmonious piano trio, the string trio, Op. 9, with its bold *scherzo;* the well-sounding Sonate, Op. 10; the celebrated Pathetique Sonate, the much-used Piano Concerto, down along the line to the last Sonate, not forgetting the thirty-two variations on an original theme, the wonderfully tragical "Coriolan" Overture, the great Funeral March of the "Eroica," and, finally, the Symphony No. 5, by which the master is most widely known, are all written in C-minor.

Next to C-minor Beethoven most frequently used the tender keys of D and F. In D-minor he achieved his greatest work, the 9th symphony, his last and sublimest of all musical compositions, the surpassing of which is not possible to genius. In the same key we have several of the most wonderful *adagios*, pouring forth the unspeakable sorrow of his great heart. In the use of F-minor Beethoven reared the superstructure of his gigantic "Sonate-Building." The following are some of the most important works in F-minor: Sonate, Op. 2 and 57, so-called "Appassionata," and further the immortal "Egmont" Overture; the Quartet, Op. 95, with its awful longing for expression, and finally three pieces full to the brim with grief and terror; the orchestra introduction to the prison scene in "Fidelio," the color-glowing storm movement of the Pastoral Symphony, and the unsurpassed tragic *largo* of the Quartet, Op. 59.

Beethoven seldom used G-minor, but in A-minor are several important movements, and the principal work in this key is the beautiful Quartet, Op. 132. The wonderful grave duet in "Fidelio" is also written in A-minor.

The minor sharp keys are not frequently found in Beethoven, although in E we have the "Ramsoumffsky" Quartet and Sonate, Op. 90, which are two of the most wonderful works of the second period. In C-sharp minor there are two very important works: The world renowned Fantasia Sonate ("Moonlight,") and one of the best of all the Quartets, Op. 31. Other minor keys Beethoven used for movements rather than principal keys.

With the "Major Family," Beethoven always preferred to use the most simple, and his favorite keys run in the following order: C, E-flat, F, B-flat, G, D.

In the uninteresting key of C, Beethoven has left a number of his most important works: 2d and 3d "Leonore," Fest Overture, called "Weihe des Hauses," "Waldstein" Sonate, the 1st Symphony and finale of the 5th Symphony, besides using it in numberless different ways. It is plainly seen that, with Beethoven, C is a favorite key, insomuch as six out of eleven overtures are written in that key. No less frequently is E-flat found, in which a number of famous works stand: The "Eroica," Overture to "König Stephan," the 5th Piano Concerto and several trios, quintets, etc. Among the most important works in F we have the two Symphonies, the Pastoral and No. 8. In B-flat we have the 4th Symphony and the pearl of the trios, Op. 97. A-flat and D-flat are not found often as principal keys. In the former we have the second movement of the 5th Symphony and in D-flat the middle movement of the F-minor Sonate, the so-called "Appassionata," both of which are true representatives of their respective keys.

With the sharp keys of the "Major Family," Beethoven has, as in the others, used the most simple and nearest-lying keys: G, D, A.

A number of pretty works bear the key of G, among which are four Sonates for piano, the beautiful violin Romance, the Overture to the "Ruins of Athens," and the B-flat Quartet, alone the idyl of music. In D (Mozart's favorite key) Beethoven has left us an exceedingly large number of works. The 2d Symphony is in D, after which come the beautiful piano Sonate, Op. 10, and the string Trios, Op. 8, 9 and 25. Further in D we have the ideal of violin concertos, and the "Missa Solemnis," in which great performance he entered the realm of religious music. Beethoven has also accepted D as the "military" key and used it for his Battle Symphony, "The Battle of Victoria," and also for a military march he left behind for the piano. For an example of excellence in A we name above all others the bright and beautiful 7th Symphony, the splendid "Kreutzer-Sonates," and the "Hammer-Klavier" Sonate, Op. 101. Nevertheless, A is not considered a favorite key.

Now, as we glance backwards, we see again that in the "Minor Family," Beethoven's favorite was C and C among the majors, and it is seen that Beethoven brought into use many of the less used keys, such as D-flat, F-minor, B-flat minor, E-flat minor, A minor; in addition to these we find the keys B-minor, F-sharp minor, C-sharp minor, G-sharp minor and G-flat minor used in the last period of his labors only.—*Concert-Goer.*

MAXIMS.

THALEON BLAKE.

God gave every man his talent but did not undertake to cultivate it.

The world needs less art and more heart.

Discipline makes conscience a trusty friend.

A very small man with a great gospel can do more good than a great man with a small gospel.

The young idea should shoot to hit, first being taught how to handle a gun, and what makes a good target.

Fine minds do more to make good society than fine clothes.

After the last word of evidence is in, the court's decision will be: "The best teacher and most masterful man is he who has mastered the great truths of life and art for himself."

An "iron-clad" rule of teaching produces rule-of-thumb pupils, who are dwarfed by such unpliable guidance; except one, perhaps, in a thousand who can thrive on it like a gazoo on Canada thistles.

"I then heard, and it will always be a rare, and only once or twice in a century possible thing to hear, four great musicians (Grisi, Malibran, Mario, Lablache), all rightly to be called of genius, singing together, with sincere desire to assist—not eclipse—each other, and to exhibit, not only their own power of singing, but the beauty of the music they sang."—*Praeterita, Vol. I, 319.*

Shading.—"In all the noblest compositions, utmost power is permitted, but only for a short time, or over a small space. . . . Music must rise to its utmost loudness and fall from it; color must be graduated to its extreme brightness and descend from it."—*Ruskin (Modern Painters).*

THE MUSICIAN.

A Monthly Publication.

PUBLISHED BY
HATCH MUSIC COMPANY.

SUBSCRIPTION PRICE.

SINGLE COPY . . . . . $ 15
PER YEAR 1 50

Free of Postage in the United States, Canada and Mexico.
Foreign Postage, per Year, 72 Cents.

Remittances should be made by Bank Draft or Check, Post Office Money Order, or Express Money Order. *Where none of these can be procured*, money can be sent in a Registered Letter.

New Subscriptions can commence at any time during the year.

Discontinuances.—The publishers should be notified when a subscriber wishes his paper stopped. In the absence of written notice to the contrary, subscriptions will be continued.

Communications are Solicited from all interested in the teaching and study of music, and in furthering the success of THE MUSICIAN. All articles or communications intended for publication should be clearly written on one side (only) of the sheet. Those which cannot be used will be returned.

All Letters should be addressed and **Remittances** made payable to

HATCH MUSIC COMPANY,

The Publishers of THE MUSICIAN do a General Music and Music Publishing Business. They can supply anything in Music.

A REALITY AND A POSSIBILITY.

It is but a few short months since editorial comment was made on the death of two celebrities, one a ruler, the other a composer. Now the American people are bowed in grief of unusual depth and sincerity. William McKinley, President of the United States, was made a sacrifice to the mad theories of fanatics. When, in February, the death of Queen Victoria was heralded unaccompanied by the horrors of crime, and the qualities which earned for her the love of her people and the respect of the world were published abroad, there was universal admiration that there should be united in one born in the purple so many commendable attributes.

●

There has been demonstrated in American life a truth of far-reaching significance. A President, whose official career received the severest criticism, was struck down by an assassin, and in the days of anxious waiting and final grief, there came to the public sense a fuller knowledge of a life with which all official acts could be aligned. What some had thought to be double dealing resolved itself into a kindliness of temper, which had in it no trace of swerving from duty. What were considered weaknesses were shown to be misunderstood elements of a character of unusual strength. The basis on which the life was rested was shown in the utterances, "Let no man hurt him," and "It is God's way, His will be done." No man, who so builded on the foundations of resignation to Divine Will and Christian Charity as that, when stricken down, he could spontaneously forgive his slayer, and express a quiet assurance in the infallibility of God, could permit the mingling of the dross of deceit with the finer metal of his composition.

●

It is a thing to be proud of that American civilization produces such characters. And it is a fact worth remembering that this example of its activity began his life work just as the vast majority of us have begun and now are beginning. Unlike the Queen, he was of humble birth and experienced all the vicissitudes and struggles of the poor, unaided young aspirant for success. The secret of his success is given in the following extract from an editorial in the New York *Christian Advocate:*

"It was now recognized that this man of plain extraction was *born with a capacity of developing*—under the influence of light, patriotic warmth, and the stress of events—into Greatness. This attained, with the aid of advisers whom his tact and knowledge of men, gained by experience, enabled him to select, he was able to cope with a multiform task which involved the prevention of divisions at home, preventing European interference, delaying the breach with Spain, making vast preparations of unforseen duration, and preventing a too early recognition of a crude government in Cuba."

The italicized words are significant. "Born with a capacity for development" is a pregnant statement. One who reviews McKinley's life, from his entrance into the army on through its widely varying activities and responsibilities to his death, is struck with the steady development which characterized him. He grew, and grew steadily broader and better.

●

What has this to do with the musician? It has all to do with him. It is the factor which will make him a success in his chosen field as was President McKinley in his. The capacity for development is the priceless boon of the successful man, be he musician or President. And what is the capacity for development? There are those to whom it seems to be a birth right. But study McKinley's life and it will readily be discovered. Patient persistence in a given course of study, concentration of mind and energies in the work to be done, loyal adherence to principles and a tireless capacity for labor. These were the elements of which his capacity for development was comprised. He was wise as well as President; he looked ahead and chose the avenues along which his activities were to be pressed He had the wisdom to put into practice the advice of President Hayes, who was his friend, and who said to him:

"To achieve success and fame you must pursue a special line. * * * You must confine yourself to one particular thing. Become a specialist. Take up some branch of legislation and make that your study." With a premonition of his future public career, he prepared himself for it by several elaborate courses of reading selected with reference to his needs.

●

What William McKinley did others can do. The musician can *make himself and his future* by adherence to principle and a judicious attention to the nature of his work and the channels along which it progresses. The qualities that made McKinley great were not isolated, showing themselves adapted to the few alone. They are the outcome of that which any man may possess if he will.

●

There is another aspect presented by this tragedy. Musicians are called cranks And too often their manner and appearance give color to the accusation. The murderer of our President was a real crank. He was a crank because he permitted his mind to centre itself, unrestrained by the principles of real philanthropy, upon sophistries which, while they profess to preach the betterment of mankind, are at bottom concentrated selfishness. True perspective was impossible and sound judgment not to be expected. The musician who, by any means, narrows his perspective until it takes in himself alone, has set bounds to his capacity for development, limits the attainment of his ideals and sets his face in the pathway of the crank.

●

It is a matter of rejoicing that the black cloud of useless crime should be lined by the silver of a life and character like that of the stricken one, and it adds to the measure of our chastened joy that such a character may be possessed by all who desire it and seek after it.

FLOTSAM AND JETSAM.

Apropos of the recent Bach Festival at Bethlehem, Pa., it has been written that "the great gain of the festival was to the participants, to those who met time and again and learned the music." While the gain to the participants was naturally great, it is doubtful whether this unqualified statement is not quite misleading. There was a very great gain to the art life of the country at large derived from the gathering of musicians and others to hear the music. The traditions, the influence of the reverent spirit with which the music was sung, the demonstration of possibilities in this so-called commercial land of ours were emphasized to the lasting good of many people who are geographically distant from Bethlehem. While as a generalization the statement may contain a modicum of truth, as an illustration of the declaration that no one gets less out of a concert than the person who goes to listen, it is hardly satisfactory.

●

The influence upon the people who come together to sing choral music is good—albeit the internal contentions of many choral societies cast doubt upon it—and the multiplication of bodies—particularly unpretentious ones—whose purpose is "to learn art by doing something," is a matter to be earnestly advocated. Back of these choral bodies should be the child music in the schools, and now we are in the realms of conflicting methods. Music should be taught in schools, whether there be a conflict or not, and the popularization of music by means of the small chorus and small orchestra is a practical way of working. An indication of what possibilities open up before those who took up this work in earnest can be had from an item printed in the September MUSICIAN, under the caption "Worthy of Emulation." It describes a performance of "The Messiah" in Galion, Ohio, by a chorus of 200 voices, 125 of which were those of boys and girls from the public schools. The performance was more than creditable; it was artistic. Here again a good is done which goes beyond that derived by the participants; the influence is widespread in the encouragement it brings to others.

WHAT ARE YOUR PLANS?

With the plans that are being prepared for development during the coming season, doubtless self-improvement is occupying a prominent place. If not, it should, for unless one grows, stagnation and eventual decay are certain. It would be interesting to know along what line these plans for self-improvement are looking. What they include, to what extent they will be carried and how thoroughly they will be consummated are important matters.

●

The question of technique will engage the attention of many. Skill must be maintained, repertoire must be replenished. The teacher should never lose technical skill to such an extent as to interfere with the ability to satisfactorily interpret the music he teaches or sing, and the state of repertoire will have an important bearing on the teaching efficiency. But there are other essentials which should not be overlooked. Back of technique, and of vital importance in making repertoire effective, lie powers of intellectual grasp, which should receive the fullest attention. Knowledge is power, and musical knowledge is something more than technical skill.

●

To enter into the spirit of a composition requires a knowledge of its inspiring cause, and while it is impossible always to know just when, why and how a composition was penned, it is possible to gain such a knowledge of Form, of Harmonic Structure, of Musical Evolution, of Biography and Aesthetics as that the intuition becomes keen, and music speaks subtly, but clearly, to the interpreter.

●

There is nothing easier and more delightful than the prosecution of these studies in connection with the work of the studio. There is not a reader of THE MUSICIAN who cannot plan a course of such collateral study, and carry it out to his or her lasting benefit. The editor will gladly help any who may desire to take up this work, suggesting studies, methods of procedure and the best available means for carrying them on. The watchword, thus early in the season, should be thorough equipment, constant endeavor to increase capacity and quickness, not only to seize but make opportunity for self-improvement. Answer honestly the question, What are you worth?

MUSIC STUDY IN GENERAL EDUCATION.

WELLESLEY COLLEGE, Sept. 10, 1901.

My Dear Mr. Manchester:—You ask me to tell the readers of THE MUSICIAN something in regard to the question papers I use in connection with one of my courses in Wellesley College. In order to get a proper understanding of the matter in hand it should be remembered that music study in a college differs radically from music study in a conservatory or college of music. I am aware that many musicians deny this. To my mind, however, in the college music study must take its place as one item in a scheme of general education; music is one of the subjects about which the average educated person now-a-days does not wish to be thought ignorant; consequently the average educated person has to have opportunities for music study and those opportunities must be so planned and arranged that they shall give to the musically ignorant some sort of notion as to the history of musical art, some idea of its language and literature and put him or her in touch with the whole matter in some sensible, tangible fashion. That is the situation as I understand it.

One course which is given in Wellesley College is called, "The development of the art of music; a course in the appreciation of music, intended to develop musical perception and the ability of listening intelligently to music." Every experienced musician will at once see that this is a large order and will understand the great difficulties in the way. Such a course must include enough of harmony to get an acquaintance with the terminology, the study of musical form and musical history with especial relation to the music that one hears *to-day* in the best concerts. This, necessarily, leads to a lot of talk that would become "mushy" if not brought to the earth by some sensible musical work. This we measurably secured by the study of "Elijah," which we analyzed, both as regards the music and dramatic effect; we sung and played it *ad nauseam*. On the pianoforte and on the organ the class heard in addition some 125 masterpieces, and each member of the class analyzed much music in various forms.

It occurred to me that if the class had to listen to a program of music they would do it in a sentimental, "mooney" sort of a way; they needed something to make them work and sharpen their musical wits, otherwise their thoughts would roam over the whole field of college activities and the world's history; or they would sentimentalize over the music and dwell with the pale moonlight or wander in interstellar spaces.

I therefore hit on the expedient of supplying each girl with as many question papers as there were numbers on the program and requiring her to fill them out; these were handed in at the close of the recitation (program) and were examined and marked. I may as well confess that while I think the idea is all right it is an exceedingly difficult idea to reduce to practicable shape; I had two question papers last year, neither of which I shall use this year. I think my experience of the past will enable me to do much better in making a third paper. The first question paper was as follows:

RHYTHM.	KEY.
Time signature.	Major.
Regular cadences.	Minor.
Cadences covered.	Minor, ending in major.
Bright.	CHARACTER.
"Catchy."	Quiet.
Uninteresting.	Passionate.
Write rhythms.	Vigorous.
Give tempo mark.	Dry.
Remarks.	Expressive.
HARMONY.	Formally beautiful.
Diatonic.	Program music.
Chromatic.	Interesting.
Agreeable.	FORM.
Many discords.	March.
Homophonic.	Waltz.
Contrapuntal.	Gavotte.
Thematic.	Minuet.
Remarks.	Other dance form.
MELODY.	Suite.
Tuneful.	Symphony.
Melodious	Sonata.
Without melody.	Passacaglia.
Melodious themes.	Fugue.
Little melody.	Canon.
In upper voice.	Fantasie.
In middle voice.	Overture.
In lower voice.	Song.
In accompaniment (if a song.)	Aria.
Remarks.	
Have you heard the piece before?	Give title and composer.
Name of composition.	Author.

This is enough to take one's breath away at first sight; indeed one very eminent man pronounced the paper entirely too difficult; but from our standpoint it was not impracticable. A student recognizing any of the items in the music she was hearing simply checked them on her question paper; if the piece (say a Mendelssohn Song Without Words) was divided into symmetrical divisions by cadences, she checked off "regular cadences;" "diatonic harmony, melodious," "melody in upper voice," "melody in middle voice," "major key," "quiet," etc., etc., as her aural capacity allowed her to grasp. If it was a piece of modern music (say Brahm's "Rhapsodie in G minor) she would check off "cadences covered," "chromatic," "many discords," "melodious," "melody in upper voice," "passionate" and "expressive," she being a Brahm's lover. All the points of the question paper has been previously covered in my lectures and fully illustrated at the pianoforte or organ. There is no more doubt that much of the aural-analyzes called for was above their grasp and realization than there was that on the whole, their perceptions were decidedly and gratifyingly sharpened. The class to which I am referring had never had any previous aural training in music, and they were at great disadvantage in having so much thrust upon them. There is a great deal of interest in this whole business of musical appreciation among educated people; musical instructors have a field of work that promises great results. All the colleges are working hard at the problem; for more than twenty five years Dr. Blodgett, at Smith College, and (for a much less period) Professors Bowman and Gow at Vassar, have been doing wonderful things in this same direction. Harvard, Brown, Yale, Columbia, the University of Michigan (to mention colleges entirely or largely composed of men) have large musical departments. In fact all over our land there is great collegiate activity in music-study. If all this musical instruction is directed towards making intelligent and keen *music-lovers*, in the course of a few years our great artists and composers will have a *clientele* comprising a proportion of the brightest people of the United States. Then we shall have the golden age of music.

Sincerely yours,

HAMILTON C. MACDOUGALL.

THE CHILD AND THE CLASSIC.

HARVEY WICKHAM.

The child stands at the beginning of experience, hence his appreciation of art is necessarily limited. One may not know what he has not seen, or felt, or heard, or tasted, or in some way lived. Until a thing has been a part of our environment, and thus become a part of ourselves, it is non-existent so far as we are concerned. A man who reads of a railroad accident does not know what it is like to be in a railroad accident, he merely understands what it is to read of one. The classic, on the other hand, is at the end of experience. It is the sum and substance of human wisdom. It is the last word of humanity. It is the ripe result of the ages. Between the child and the classic, consequently, there seems to be a great gulf fixed.

The gulf, upon examination, though unquestionably there, is not so wide nor so deep as might be expected. It is a saying that extremes meet, and the child may be nearer the classic than the middle-aged man. Much experience in life is what may be deemed false experience. It was meant to teach us truth, but has been misinterpreted. As the humorist puts it, "it is better to know less than to know so much that isn't so." In other words, experience sometimes yields knowledge, at others prejudice. The young, if they miss the former, escape also the latter.

In one other way is the child prepared for the appreciation of the classic. There is in education a leading-forward process. Coming in contact with a work of art just beyond us, and yet not quite out of reach, is itself an experience. The work of art in a measure is able to prepare us for itself. Not that joy and sorrow are to be known by the contemplation of their shadows as they are to be known in later life; yet much of the joy and sorrow in music is of the shadowy sort, and resembles real pain and pleasure only "as the mist resembles the rain," or, as Miss Carey insists in putting it, "as a brick-bat resembles a brick." But what are some of the difficulties of understanding the classics in general and classical music in particular? First comes

THE TECHNICAL DIFFICULTY.

This is more a difficulty of the player than the hearer, but as very few come to be intelligent auditors, save by becoming intelligent performers, its consideration is not out of place. Classical compositions (and I use the word to mean the superlatively excellent, and not the works of a given period or certain gifted pens) are difficult. The melody in the hands of a skillful composer has a way of losing itself in an accompaniment which twines itself lovingly about it, to the dismay of the performer. The melody must, by hook or crook, be brought forward and introduced to the audience. How? There's the rub. Fingers must be taught to discriminate emphasis and a host of equally puzzling things, before the average product of a fine composer can really be heard at all. Also, such a composer has in mind a beautiful idea when he writes, and beautiful ideas are apt to be forgetful of skips, awkward positions of the black keys, and to produce pages distinctly "ungrateful" to untrained hands. Most teachers fail to take into consideration the innate difficulty of the best music.

THE FORMAL DIFFICULTY.

Great writers are obscure. Not that their expressions are equivocal. On the contrary, they are wonderously clear. But fathoms hide the bottom of the stream as readily as mud. Profundity of thought leads to difficulty of comprehension. Moreover, condensation of expression, the curtailment or omission of obvious corolaries to the main argument, the taking for granted that the reader is blessed with keen apprehension and sympathy, all tend to make a good book a sealed book. When it comes to musical composition, these qualities tend to make the form shadowy. The balance of parts in a *chef d'ouvre* is like the balance among the limbs of a symmetrical tree. It is there, but it is difficult to analyze. It is not like the correspondence between the opposite wings of a mediocre building. It is subtile. It is a hint merely of what the composer meant. However elaborately developed, much has to be read between the lines. And now we come to another difficulty greater than all.

THE EMOTIONAL DIFFICULTY.

A child's emotions at first are very simple. He is happy or he is unhappy. He seeks pleasure and shuns pain. With the years comes a very different state of things. No longer do shade and sunshine mark themselves off thus clearly. There is a blending of one with the other. Feelings become endlessly complicated and finely shaded. Especially in modern life, the painful ceases to be shunned. True, there are degrees of pain which are regarded with the old-time horror, but one has but to compare old-time portraits with those of to-day, to be convinced that we are a morbid race compared with our fathers. Music, above all other things, cherishes this world-sorrow. It did not use to be so. A number of primitive musical terms come from some root meaning joy. Violin, for example, from the Latin vitulare, to make glad. Music was once the *gay* science. It must become so again if it is to influence for good the healthy, normal young student. It is much more difficult to be sweetly serious than dolefully melancholy in composition. Very difficult indeed to be jolly without being silly. Yet the feat has been accomplished time and again by the old, old masters. Some day, perhaps, the world will bubble over with fun in its tunes once more. Then the bridge between the child and the classic, the modern classic, will be built. Not but what the adult will always find profit in what is meaningless to the child, but the overcharged sentimentality of the age will be done away with.

Musical antiquarians in London, notes the New York *Evening Post*, enjoyed a performance on June 15 of an opera by Purcell, which had not been heard for a couple of centuries. Apart from the music, there was a special reason for this neglect. The score, in short, was stolen, and although, in 1701, the treasurer of the Theater Royal in Covent Garden offered 20 guineas reward for the MS., the thief did not claim it. In those days the punishment for such book "collecting" was the gallows. The English critic, Mr. Shedlock, within recent years spent three of his holidays searching for the missing score in continental libraries, but finally found it at home, in the Royal Academy of Music, where it had been for more than sixty years. The libretto of the opera is an adaptation of Shakespeare's "Midsummer Night's Dream."

No art has held such personal connection with every human emotion as music, and therefore has it *the speaking force of a personality*, in which lies its greatest strength.—*Wakefield.*

THE NEW EDUCATION.

FOREWORD.

The *New Education* offers its readers, for 1900–1901, the best plan for a year's study that it has yet presented. It will be the best in two particulars: In choice of subject matter and in manner of presentation. The hearty reception which this novel educational feature has met with makes it possible for THE MUSICIAN to continue to develop the idea of home music study and to offer the best advantages that are to be attained in this manner.

The series of subjects for the coming year follows. Each subject is in the hands of a specialist and will be treated practically and as fully as possible in twelve lessons. In order to meet the immediate demands of students who seek information on special points in the work, the editors will be glad to furnish

Suggestions for the further study of any subject.
A bibliography of any subject.
Information on any question in the lessons.
The consideration, and, if necessary, the presentation, or general discussion of any point that comes up in actual teaching.

The subjects for the coming year are as follows:

I. Advanced History of Music; twelve lessons, with suggested reading.
II. Psychology and Pedagogy of Music; six lessons in each subject; suggested reading.
III. Advanced Music Form; twelve lessons developing those already given in this department.
IV. Harmony and Melody; twelve lessons; six in each topic.
V. The Literature of Aesthetics and Criticism in Music, twelve lessons.
VI. The History and Development of the Piano, twelve lessons with illustrations.

The following conditions *must be observed:*

1. Address all communications for the *New Education* department, thus: THE MUSICIAN, New Education Department, 8th and Locust Streets, Philadelphia, Pa.
2. *Do* NOT *roll your manuscript.*
3. The answers for each month must be sent as soon after the issue of the journal containing the subject to which they relate as possible, and before the next succeeding issue. No papers are to be held until end of course. New members can join at any time by sending names and answering questions contained in current issue.
4. The editors are obliged to say that no papers will be read or rated that fail to comply with conditions 3, 4, 5 and 6.
5. No two subjects should be written on one sheet. All sheets pertaining to one subject—for example, History—should be independently fastened.

Ratings will be largely influenced by the following points:

Accuracy.
Clear, concise, yet smooth diction.
Grasp of the subject.
Originality of thought and statement.

The questions following each lesson have two purposes: First, to connect the reader's mind directly with the text—the most fundamental, that is, the lowest duty a question can serve, but necessary. Second, to suggest a thought beyond the mere expression of the words in the text; the highest purpose a question can serve. The first is by far the least useful if he has a memory; the second the most useful if he has a reasoning faculty.

The editors will welcome letters from teachers which contain:

a. Suggestions as to what will make this department more valuable, the suggestion being dictated by the teacher's individual experience.
b. Statements regarding the application of this work with pupils as well as in one's own effort to secure a broader education.
c. If there is any line of thought of practical value to you, and likely to be equally practical to others, let us know it.
d. All such suggestions must be sent to the office of THE MUSICIAN, addressed according to direction given in regulations.

[NOTE.—*New Education* students are specially requested to avoid enclosing *anything* relating to their business with the Hatch Music Company with their *New Education* papers. The failure to comply with this rule causes great trouble. Kindly keep this matter in mind. We wish to call the attention of our students to the necessity of *fully prepaying postage on their papers.* We have been compelled to pay additional postage on a large number of those already received. This should not be, hence we request our students to take care that sufficient amount of stamps be affixed before mailing.]

XI—MODERN MUSIC.

PERCY GOETSCHIUS, MUS. DOC.

The music of our epoch presents a contrast with that of the past century which, were it not that we have become insensibly accustomed to it, would be positively startling. The history of the recent past has been one of stupendous achievement and swift progress in all directions; and musical thought and expression have not dropped behind in the line of onward march. The growing freedom of all the civilized world has engendered frank, bold, unrestrained utterance in the musical art also. For our art has lately found a tongue; has become, as never before, the most immediate and responsive vehicle of subjective feeling; the proper mirror of every emotional and imaginative movement, whether genuine or affected, deep or shallow, sane or eccentric, prompted by sensibility alone or by reason.

Not that bygone generations have been lacking in these human passions or the desire to give them vent. Humanity has laughed and wept, mourned and exulted, loved and hated, for countless centuries, with as much passion and energy as it feels at this hour. But, for one reason and another, these passions found little or no voice, *as passions*, in musical speech.

Evidences of the inclination are not wanting. Music was, long, long ago, called the "language of the emotions," at a time when its utterances were yet as cold and impassive and barren of emotional impulses as the book of Numbers. And so strongly was this doctrine promulgated, so universal was its sway, that many blunders, ridiculous indeed in our modern eyes, were committed in its name—blundering experiments that shot very wide of the musical truth. So strong was the belief that music should "express feeling," that when Eduard Hanslick's trenchant book, "The Beautiful in Music," appeared (some forty odd years ago) and demonstrated that absolute music founded its claims to beauty and truthfulness upon an intellectual rather than an emotional basis, it was greeted with a jeering opposition that has but recently begun to subside before a fuller appreciation of the true consistency and nature of music. And yet the *inclination* to regard and utilize music as an emotional medium which, I say, had long existed, was slow of realization. They were right, those old composers and thinkers; music *is* an emotional medium; but they did not know how to use it to that end, were not able to focus its rays, so to speak, and produce a clear image of the agitation within the soul.

The trend of modern history is towards greater freedom, the freedom that comes of fuller knowledge, and the desire and ability to throw off old restraints. And this freedom of thought and expression in music, this casting aside of the limitations of technique and conception, and of prejudices, too, under which former generations labored, is what has given to modern music so new and distinctive a character. This it is that distinguishes the tone art of our day so amazingly from that of the past.

The infusion of Romanticism into music was an early evidence of the influence of growing freedom, and this element has advanced, of late, to a fullness of growth that threatens to overshadow every other musical aim. Through the agency of an untrammeled conception of the art, of a broader view of its possibilities and purposes and a more emphatic expression of subjective feeling, avenues have been opened for the admission of qualities hitherto held foreign to music, or for a wider, freer and more generous development of such qualities as have long been recognized as lying within the domain of musical reflection.

Thus, such attributes as mark the national peculiarities of music stand out in bolder relief than ever. At no time in the history of music have the specific national traits of—for instance—the French people been quite so vividly reflected in French composition (as compared with that of other nationalities), as during the past generation or two; and the same is true of the Russian, Italian, German and other types of national music. For example, there is no such distinction between the eighteenth century products of Scarlatti (Italian), Rameau (France), and Matheson or Graun (Germany), as we recognize instantly, to-day, between the works of Verdi, Saint-Saëns and Grieg or Tschaikowsky. These differences are, it is true, not wholly traceable to national disposition, but largely so, nevertheless.

Perhaps the most striking characteristic of modern music is its close alliance with the *drama*, not only in a technical, but chiefly in a psychological sense. Richard Wagner, with his overpowering demonstration of the vitalizing influence of dramatic feeling and incident upon music, will always remain the most prominent and powerful personality of our epoch. In his hands and those of his followers a revolutionizing affiliation of drama and music has been achieved and a hitherto undreamed of power and capacity discovered in the latter.

The most recent of Wagner's disciples, among whom Rich. Strauss may be cited as a remarkable type, have followed up these musical disclosures, and projected them (experimentally) into the realms of mystic fancy and philosophy, where possibly still more subtle intrinsic musical powers may be unveiled. So sharp is the contrast between this and the older conceptions and uses of the tone art, that no musical thinker can now escape at least silent participation in the burning question of the hour: whether the setting of tones shall be governed by the principles of tone-relation (tonality), or, with complete disregard of any mathematical system or adopted formal conditions, solely by the momentary promptings of the writer's subjective feeling, mood, fancy or perception?

It is mainly owing to the ever increasing interest and dignity of this question (and others of parallel tendency) that music has, as never before, asserted and supported her claim to philosophic treatment and analysis, and has found so many able champions among the great writers and thinkers of our day. Never before have so many books been written about music and its mission, by literary men who stand virtually outside the ranks of practical musicians (composers), as in this modern generation.

And, at the same time, practical musicians of high literary attainments are applying themselves to the solution of the purely technical, theoretical and pedagogic questions bearing upon music study, and our modern day is witnessing portentous reforms in the methods of imparting musical knowledge, especially in the domain of Theory.

QUESTIONS.

1. What has music always been called?
2. Why was this conception of music so slow to be realized?
3. How does the trend of modern history affect music?
4. What was an early evidence of freedom of musical expression?
5. What attributes have become more distinct in the music of our day?
6. What is the most striking characteristic of modern music?
7. What have Wagner and Rich. Strauss done?
8. What is the burning question of modern music?
9. What effect has this had upon musical literature, pedagogy and theory?

FORM—ELEVENTH LESSON.

The Complete Round of Study.

THOMAS TAPPER.

I.

In order to keep the idea of each of these Lessons independent we will take up the subject of Bibliography as Lesson Twelve, reserving this exclusively to recapitulate. Besides giving a list of books on Form (in the November Lesson) there will also be given a list of such musical compositions as are indispensible to the student as material for analysis. After all study of manuals and of outline lessons the student turns to music itself as the only complete and satisfactory textbook on the subject, realizing that the mound is but some one's gleaming in a garden in which he, too, must wander if he would know of its glories.

II.

We have discussed four classes of structure. The types of each class are intimately related, and each class is closely allied to all other classes. Hence, any subdivision in three or four or more classes is a mere convenience. The four classes are:

I. The Phrase and Period.
II. The Unitary, Binary and Ternary Forms.

III. The Sonata Group.
IV. The Rondo Group.

Further, slight reference has been made to such generally short compositions as the Prelude, Invention, Fugue and the Dances of the Suite.

The Complete Round of Study, which every student should make who intends to study Music Form seriously, may be illustrated by any one unit from the many which make up the complete subject. As the purpose of this Lesson is to outline, as a review, what is meant by the Complete Round of Study, we will illustrate the process by the Phrase.

The most successful study of Music Form is that which is synthetic as well as analytic. This allows the student to observe the subject, so to speak, in the hands of others as well as in his own. In short, he gains definite knowledge of the thing and of the process of making it, at first hand.

His knowledge of the Phrase may be expressed in a three-fold manner:

1. That abstract (often indefinite) idea he gets of it from books.
2. That clearer idea he gets of it from scrutinizing examples of the Phrase.
3. That yet more definite idea which he gains by making the Phrase.

Naturally all this leads one step farther: If these processes are carefully carried on the student should be able to recognize, at once with the ear, an example of the Phrase. That recognition is a summarization of his power and a proof of his knowledge. Hence, we may again express what one may call Phrase. Knowledge in this wise:

1. The indefinite idea.
2. The idea made still more definite by analysis.
3. The idea made still more definite by creation.
4. The proof that the idea is definite in the ear's recognition of the form.

As regards the Phrase and the Period this round of knowledge is not unusual; even in public school instruction in music many teachers succeed in presenting all this, even to young children. And those who thus study the Phrase have little or no difficulty in learning similarly the Period, even in its Irregular forms, including its three-phrase form.

But too many stop at this point. If the student would industriously proceed to master the Binary and Ternary Forms as immediately, remembering that as one goes on progress is less and less rapid, owing to the increase of exceptions, he would soon gather enough strength to listen understandingly to the shorter Rondos and Sonatas as to the Sonatinas.

The gain, then, from the study of Music Form is (1) a gain to music thought, for it simplifies it and sets it in order; (2) it is the knowledge fundamental to right listening.

The observant teacher will never lose sight of the four divisions of the subject last given, for *they dictate the aim and the process of every Form lesson she gives*. The lesson would take this order:

1. Tell the class as clearly and simply as you can about the Form you are about to study.
2. The first impression having been made clear give the student some examples for study.
3. When the student can recognize in the Form in the music he plays he should compose many examples of it. These should be made the basis of individual and of comparative study.
4 The student should next receive practice in the recognition and analysis of the Form by appeal to the ear alone.

This process, carried on through the entire subject, gives one a knowledge of it befitting a musician. Applied to all the significant music we have, by one who is naturally adapted to the study, would produce such a master of the subject that his services would be in constant demand. Talent, persistent study and observation are required, carried on not merely in Music Form, but in Architecture and Poetry. If any young man wants a specialty here is one. The specialty wants the young man.

The best part of every great work is always inexplicable: It is good because it is good.—*Ruskin.*

Popular, otherwise uninstructed, delight in musical composition, as in all else, naturally turns to the simplest forms of it, as a child does to the shortest words in the language.—*Wakefield.*

THE COMBINATION OF RHYTHMIC WORDS WITH MUSIC.

H. A. CLARKE.

So many songs are written and published that one might be excused for thinking that there is nothing in music so easy of accomplishment as the writing of a song; true, in a certain sense, but—there are songs and *songs*, and while it is not even necessary to know the rudiments of music to become the "composer" of one kind, it requires genius of the very highest order to make those of the other kind. To begin, no composer, though never so great, can make a good song out of poor poetry. This we state as an axiom, notwithstanding the fact that many grand opera scenas have been written to very poor "words," but the opera scena and the song are as wide asunder as the poles—they have not an element in common. Many an opera scena may be improved by substituting new and better words; for example, in "Oberon" or "Euryanthe," the reason being that in this class of composition the *music* is of more importance than the words, but who can conceive of any other words being fitted to Schubert's Serenade? The reason being that in the perfect song words and music are so united as to be indissoluble. Every syllable, accent and emotion of the poem is reproduced with absolute fidelity in the music. This is the reason for the impossibility of translating a perfect song from one language to another. It may be done so as to *read* well, but not so as to be *sung* well to the orignal music.

Having secured a poem that will make a good song, the would-be composer's first step should be to commit it to memory and think over it for some time before trying to fit it with a melody. It is only to the supreme genius that the right melody comes instantly, like a flash of inspiration, after a single reading of a poem. In setting to work the first thing the beginner should do is, determine the places where the metrical accents of the poem fall. This may seem to be a superfluous caution, but to anyone with a knowledge of versification it is painfully evident that very few song writers know anything about it. The trouble here is often the fault of the "poet," whose want of skill makes him occasionally put a monosyllable—such as "in," "and" or "the"—that should never bear an accent on the strong member of the metric foot. This sort of verse writing is often found in hymns. The next point to decide is the rhythmic unit of the music. Shall it be 1, 2 or 1, 2, 3? The character of the words must guide in making this choice, only the merest hints may be given; for example, if the general character of the words is grandeur or dignity, the unit of two will, in general, be found appropriate. If passion is the characteristic of the words, the unit of three is often used, but these remarks are not to be taken as rules. If the writer is lacking in the musical instinct that determines this point, he is not likely to succeed as a song writer to any very great extent.

The next and most important step is to construct the melody so that the climax of the musical shall coincide with the poetical emotion. To do this it is necessary to weigh well every word, that it may have the emphasis, or lack of emphasis, that belongs to it. There are certain practical considerations that should never be lost sight of in doing this: first, keep before the mind the kind of voice for which you are writing—the passages that suit the soprano do not come well from the bass, or, indeed, from any other voice. The composer who understands the voice—and no one should attempt to write songs without this indispensable preliminary—will always so construct his melody that it will fail of its highest effect if sung by any other voice than the one for which it was written. Consider what would be the effect of "O Rest in the Lord," transposed a fourth higher, and sung by a soprano, or "If with all your hearts," a fifth lower, sung by a bass. Mendelssohn *knew* the voice for which he wrote. Another very practical point is the employment of high notes. This should never be done on any vowel sound but broad A, or Ai, if possible. A, as in *day*, may be used, but the close vowels, E and the short I, are impossible. Again, high notes should be sung to *one* syllable. The effect of a soprano attempting to sing three or four syllables in succession, on high A, is simply ludicrous.

These remarks apply with equal force to the low notes of the bass; these sounds only come out well with a broad vowel or a diphthong, like "oi" or "ai." In short, the middle range of every voice is the right one for general use. The extremes should be sparingly used and only for the production of well-calculated effects. Another point worth observing is, avoid writing several notes to one syllable, unless perfectly certain that the effect will justify it. The day has long passed when runs and trills and turns were considered elements of beauty in a melody. When these ornaments are used there ceases to be that perfect equality between the words and the music that should characterize the song and the music gets a little ahead of the words. A few words as to the accompaniment. It has become the fashion among song writers to elaborate their accompaniments until they are beyond the reach of any but the virtuoso pianist. While this is a decided improvement over the old threadbare forms, it is yet open to the objection that it may be carried too far and defeat its own object by robbing the melody of its interest and by tying down the singer to a hard, mechanical style of performance, thus preventing the discriminating use of the Rubato, that most important element in good singing.

QUESTIONS.

1. What distinguishes the song from the Operatic Scena?
2. What is the objection to translated songs?
3. What is the first step when about to write a song?
4. What is necessary as to the metre?
5. What as to the rhythmic unit?
6. What is the most important point to be observed?
7. May a song written for one voice be just as well sung by another?
8. How should very high or very low notes be used?
9. What things are mentioned in this paper as things to be avoided?
10. What objection is made to elaborate accompaniment?

THE DEVELOPMENT OF THE PIANO.

FRANCIS L. YORK.

In every art the material and the artist mutually influence each other. In the days of Pan we may be sure that where the reeds grew the straightest and the most abundant, the pipers were most numerous and piped most sweetly. Phidias and Praxiteles could never have produced those marvels of sculpture that are at once the admiration and the despair of modern sculptors, if marble of the finest texture and most even color had not been ready to their hands. So in modern times with the piano and the pianist. As the pianist made greater and greater demands on the piano, the instrument was enlarged and perfected to meet those demands. As the piano was perfected, the pianist was stimulated and encouraged to seek out new effects and produce them in his playing, or indicate them in his compositions. But any change in the piano itself, or in the methods of writing for the piano, necessarily produce corresponding changes in the methods of playing the piano—that is in piano technique. The technique possessed by the average piano player of the present has changed wonderfully since the days of Beethoven. When Chopin was writing his compositions, they were regarded by the pianists of his day, Liszt alone excepted, as being impossible for anyone but the composer. Even Mendelssohn said he could not play them—he found himself continually stumbling over the (to him) awkward passages. Yet to-day they are a regular part of the undergraduate work in all our conservatories and are not only played, but played with an adequate technique and an intelligent interpretation by hundreds of students.

If the student will review in his own mind the various stages through which the piano has passed in its wonderful development, he will see that the art of piano playing and the art of writing for the piano must necessarily have changed greatly to keep pace with the constant changes of the piano itself. As the scientist will take a fragment of fossil bone and reconstruct in his mind the ante-diluvian monster of which it must once have formed a part, so the musical historian might almost construct the seventeenth century prototype of the piano by a study of the dry bones of the musical compositions written for that instrument. Not only was the instrument itself different, but the art of music considered as a whole was entirely different from the art as we know it at present, and this, of course, greatly influenced piano music and piano playing. At this time all music was polyphonic and may be said to have been almost vocal in character—the instrumental genus had not as yet developed. Students of counterpoint know that even now-a-days the text

books insist that parts (still called voices) shall move in such a way as to be easily *sung*, and in the eighteenth century counterpoint and composition were one and the same thing. Thus music written for the clavichord consisted largely of preludes, fugues, simple dance forms and small pieces written contrapuntally. Harmony, as such, was practically unknown, and what we understand by melody was either unknown or little cared for. As the instruments of the period possessed but little sustaining power, long sustained tones could not be used. In order to remedy this deficiency trills or shakes were introduced, which, by means of a rapid alternation of the principal tone with an auxiliary tone, gave to some extent the effect of a continuous tone For a somewhat similar purpose the turn was invented, which by making, as it were, a loop about the tone, gave the effect of playing with the tone, toying with it, as if loath to leave it, thus keeping it constantly in mind. The *Bebung*, which could be used only on the clavichord, has been described in a former article. As both the Harpsichord and the Clavichord were deficient in their ability to produce loud or soft tones, and as the desirability of having some means of accenting individual tones was manifest to all players, various devices were introduced by the player and the composer to call attention to the emphatic tone, and thus to provide a substitute for an accent. Among these devices were the appoggiatura, the mordent and the inverted mordent, which by the biting effect they produced gave more prominence to the tone thus affected; the slide, either from above or from below, answered the same purpose. Still another "ornament" or "grace," as it was called, was produced by striking two contiguous keys at once, immediately releasing one of them. In this way the tone began with a very harsh dissonance, which at once passed away, leaving the single tone, the effect being not very different from the mordent. All of these ornaments, except the Bebung and the ornament last described, are still in use, their employment having been transferred to the piano. The effects they produce both on the ear and on the æsthetic sense are largely modified by the newer instrument and by the resources of modern music, but the student will use them more intelligently now that he understands their origin and their *raison d'etre*. For instance, viewed in the light of the historical development of the piano, he will readily understand that the mordent is never to be considered as three distinct tones, but as one tone beginning with a characteristic accentual effect.

Since in the old method of tuning prevalent before the general adoption of the tempered system, the black or raised short keys were seldom used, the hand was held in a somewhat different position from that commonly used at present. It was held quite flat, the fingers nearly straight and the thumbs often quite off the keyboard. The very expression used for playing the harpsichord—"touching"—is instructive, recalling to us the fact that the more serious styles of music were not suited to this instrument, that its effects were never massive, that full tones, sonorous chords, passages expressing passion or deep thought were all foreign to it. Such music as we should expect would appeal to Marie Antoinette, as she played at being a shepherdess in the park at Versailles, was the music pre-eminently suited to the clavichord and to a great extent to the harpsichord.

With the adoption of the equal tempered system came the use of all the scales and consequently the more frequent employment of the raised short or black keys, necessitating a different position of the hand and a more frequent use of the thumb. The three long fingers were held over the black keys and the thumb was used almost exclusively on the white keys. The two composers, Chopin and Liszt, introduced many new ways of fingering and many musical effects never before heard. In their time the piano was already larger, its tone more sonorous, its action deeper and its scale wider. They were both quick to seize on the new possibilities afforded by these changes. In their works we find the extremes of the keyboard brought into use, much heavier chords employed and especially chords in widely dispersed harmony—an effect that before Chopin was scarcely known. Most beautiful results were obtained in this way and other composers were not slow to imitate them. Schumann, himself an innovator and discoverer of new pianistic effects, speaks of hearing Chopin play some of his compositions and tells how novel were the effects that he produced by long sustained chords and arpeggios, by totally subordinating certain tones to others, producing the effect of a shimmering background of iridescent tone, and by the dainty arabesque like tracery of his runs and ornaments. Thalberg should be mentioned, too, as his style of sustaining tones of the melody with the pedal while he wove about them a pattern of delicate accompanying tones, has had a permanent influence on piano composition. Liszt absorbed all these effects into his own style, cosmopolitan that he was, and in addition treated the piano more as an orchestra—not in the sense that he attempted to imitate the orchestra on the piano, but that he mentally assimilated the effects of the orchestra and reproduced on the piano corresponding piano effects. It was he, more than any other, that led the manufacturers to increase the power of the piano, to strengthen the action and increase the compass of the keyboard. In fingering, he, as well as Chopin, passed the fingers over each other, used the thumb freely on the black keys and made the reduplication of the tones in the octave an integral part of his method of getting great sonority, either with or without intensity. In the latter art Schumann, too, was a past master. All these new riches in piano effects again brought about changes in the manner of piano playing, or as we should say, in piano technique. With increased power of the instrument came in reased muscular effort on the part of the player. The tremendous thundering tones that we have heard Paderewski and Rosenthal produce from the piano within the past few years were impossible fifty or seventy-five years ago, and could not have been produced even on our present pianos with the technique of that time. The clavichord was played with the slightest motion of the finger tips—the modern piano must be played not only with the fingers, but with the hand as a whole, with the weight of the forearm and even with the added weight of the body. The different muscular actions in use at present are legion, but the most important are: the finger action pure and simple; the same with the added weight of the hand, arm, etc.; the hand stroke, in which the whole hand acts as a hammer and strikes the keys from above; the drop of the forearm, dragging the keys down, and the reverse of this action in which the forearm springs up in an elastic way, throwing the keys down by the reflex action of the limp hand; a drop of the hand and forearm from above the keys; a straight forward blow from the shoulder, and endless combinations of all these.

The most modern phase of piano playing and piano composition is the employment for harmonic purposes of different intensities at the same time in the same chord. This requires the most absolute control of the varying pressures given to the keys and is of the greatest difficulty, but when well managed is capable of producing the most beautiful effects. It also adds to the material available for composition for the piano, as it makes it possible to use combinations of tones that otherwise could not be used. Many of the compositions of Grieg. Brahms, and still later of Sinding, must be studied in the light of this new tonal effect, or the player will misrepresent the composer entirely and very likely get atrocious results.

Many of the effects mentioned depend largely on the proper use of the damper pedal, and there are in addition many very beautiful effects produced by the pedal alone. With the damper pedal one may make use of the harmonic overtones, one may bring out melody tones with a setting of pianissimo accompanying tones, one may even use a tone as its own background—in fact there is no end to the effects that may be produced by an artistic use of the material afforded by the modern grand piano.

As a result of the foregoing the student will understand that he must not play a Bach Sarabande, a Mozart Concerto, a Chopin Nocturne, and a Liszt Rhapsody all in the same way. The quality of tone, the muscular actions used, the pianistic effects to be brought out must be studied, and above all the musical idea itself must be interpreted in the light of what he has learned regarding the style of the writer, the prevailing manner of musical composition and the degree of development that the piano had attained in the time of the composer whose work he attempts to render.

QUESTIONS.

1. What, in general, is the relation of the artist and his material?
2. In what way does the piano influence the pianist?
3. How does 18th century piano music differ from that of the 19th?
4. Name some ornaments whose purpose was to remedy the deficiencies of the clavichord and harpsichord?
5. Mention some changes in fingering and in the position of the hand.
6. Mention some effects peculiar to the piano as contrasted with the harpsichord and clavichord.
7. What practical benefit does the piano student get from the study of the development of the piano?

A GUIDE TO THE STUDY OF MUSICAL LITERATURE.

ARTHUR L. MANCHESTER.

The question, Can Expression in Playing be Taught? has often been asked. The peculiar elements which combine to produce an expressive performance long evaded analysis. In this ability to interpret with that subtle power, which gives life to ivory and metal, gut and wire, was held to reside that talent which marked the born musician. And many students have wandered with more or less aimless steps along paths vaguely pointed out by their teachers. Imitation was the means largely used to develop expressionful playing or singing, a means not particularly to be commended

More than thirty-five years ago there was a mind actively engaged in working an idea which had been born in it. It was one of those minds that is not satisfied to rest on imperfectly formed conclusions; it was so constructed that it was ever reaching out after solutions of problems. The idea came to it that expression should not, could not, be merely a matter of feeling; that it was based on principles. At once it began searching for those principles. It had practically nothing on which to base its belief, and inquiry of noted musicians and teachers gave no help, but rather revealed an absence of anything like practical principles of expression. It was a mind, however, that was not afraid to go alone. Every scrap of information that could be gathered was treasured and deductions were made, the constant endeavor being to insure absence of personal bias.

The result of this study was a book of really incalculable value to every student and teacher of the piano. "The Principles of Expression in Pianoforte Playing," by Adolph F. Christiani, stands alone as a work of practical music æsthetics. It is not a book to be read; it must be studied, and that patiently and with thoroughness. As is to be expected of a mind constituted as was that of the author, it is very thorough and minute in its examination of the subject. From the introduction to the last deduction it is painstaking. There is a charm in the forceful and clear presentation of the subject matter. Evidently the author understood what he meant and is able to put his thoughts before the student in a clear, concise and striking form. Many years ago William H. Sherwood, in a conversation with the writer on the study of piano, said he insisted on each of his pupils carefully studying this work. He ranked it among the most important and instructive agencies for progress obtainable.

The author did not live to see the result of his long years of patient labor and research in print; he died just as the book was about to come from the press. As an example of clear thinking and forceful statement the book is noteworthy. It is valuable, not only for its exposition of the principles of expression, but equally so because of the influence of its scholarship.

The studious weight of this contribution to musical æsthetic literature is offset for the reader who turns to "Music and Poetry," by Sidney Lanier. As its title indicates it is a discussion of some aspects and interrelations of the arts of music and poetry. Lanier was a practical musician and a real poet. He played the flute in orchestra and wrote volumes of poems and essays. He has an acknowledged place among authors, and his dicta concerning music and poetry have authority.

Reading the book will stimulate imagination as well as broaden one's views. The author has beliefs and expresses them in the terms of a practiced writer. He takes up some practical subjects, too, and discusses the orchestra of to-day and the physics of music, for example. The later chapters are devoted to essays on poetry and poets. While these may not directly concern the musician, they should be read for they provide mental furnishing of great value.

There is yet another book which we hope every musician who has not yet done so will not only read but completely absorb. "The Intellectual Life," by Philip Gilbert Hamerton, should be read with keen delight by everyone whose brain is an important factor in his daily activities. Despite sayings to the contrary, the musician's is an intellectual pursuit. As the

book first named in this article announces the belief that intelligence can be made the ruling spirit of interpretation, so it is being accepted as a fact that brains are an important item in the musician's furnishings. This being so, "Intellectual Life" is overflowing with suggestions which will appeal to the musician with great force.

The intellectual life is considered from various viewpoints. Influences, favorable and unfavorable to its growth, are taken into account. Thus its physical and moral basis; its relation to education, the power of time, the influences of money, custom and tradition, women and marriage, aristocracy and democracy, society and solitude, intellectual hygienics, trade and professions and one's surroundings are written about by one who speaks whereof he knows. And the writing is fascinating; the author impresses the reader with a sense of a complete grasp of the truths he is presenting.

The book can be read, but it should be read and re-read many times. No musician can assimilate what this author says and not become a far better artist or teacher than he was before. It is the reading of such books as the last two mentioned that make for real culture and amplify the musician's powers. If you ride from one place to another in giving lessons, take this book with you and read it carefully; make its contents completely your own. Think about it until your own intellectual life feels the influence of the truths, the warnings and suggestions it gives.

THE STUDY OF A SONATA.

Beethoven's Op. 2, No. 3, in C.

DR. HENRY G. HANCHETT.

EIGHTH ARTICLE—GROUPING AND PHRASING.

The measures of each distinct movement (counting the trio as one) are separately numbered. Place a number before each bar, single or double, in the order as printed, and without regard to the completeness of the measures.

Music, like everything else that occupies human attention, is capable of subdivision into parts, fragments, and elements, and these again can be considered in various groups for purposes of study and comparison. The study of any subject consists largely of dividing it into small portions, examining and classifying these, comparing them one with another and uniting them into new combinations. The study given to our sonata in the previous articles of this series, has been along these lines. We first considered the movements, then the beats and measures, then the harmonies, then the melodies, then longer portions that were reproduced in new shapes. In the present article we will consider several different kinds of groups into which a sonata may be divided according to the point-of-view from which it is to be studied.

In the third article in this series, considering the topic: Meter, comment was made upon the fact that many writers on analysis seem to consider the measure as the unit of subdivisions of every sort except such as relate to harmony. We are told that a motive is so many measures, a period is another definite number of measures, that a subject has so many periods of definite length; and so on with all possible subdivisions. Not that no room is left for different lengths of elements, but that all are defined as *regularly* made up of so many measures or some small multiple of that number. To be sure, the writers in question often admit irregularity and exceptional cases, but they clearly insist upon the rule as above described. But one will not need to spend much time in examining good music (not dance music, however good) to convince himself that the exceptions to these rules so far outnumber the examples as to make the rules themselves useless; and a little analytical thinking will show that no rules of the class specified are needed. Metrical groups there certainly are in all musical compositions, and in dance pieces these are apt to coincide with the periods, but in movements of other styles various groupings are quite independent of metrical considerations.

Music divides horizontally—so to speak—into voices and harmonies. Vertically (to use a contrasting term) it divides metrically, formally, structurally, and (for lack of a better word) nodally. The metrical subdivisions have already been sufficiently considered in the third article of the present series. The formal divisions are those which concern the sequence and arrangement of ideas in accordance with the prescribed form of the work. The structural divisions are those which make up the periods and related groups. The nodal divisions are those displayed by the articulation of the piece—the connections and detachments observed in the interpretation. The component groups related to the form are called Movements, Chapters, Subjects, Episodes, Passages, Codas, Themes, Motives and the like. Those groups related to the structure are called periods, strains, clauses, sections, fragments and the like. Those groups related to the articulation are exclusively phrases and detached tones.

Some years ago an old clergyman is said to have taken his text from Matt. 24: 17. "Top—(k)not come down," and from those words to have preached a sermon against conformity to the fashions of this world, especially in the matter of elaborate dressing of the hair. The verse (sentence) from which his text was taken reads: "Let him which is on the housetop not come down to take anything out of his house." His sermon (movement) was formally divided into "heads" (Subjects and Episodes) of which the text was the motive; but his sentences were now long and argumentative, now short and exclamatory; and his delivery and elocution, (phrasing) were such as gave his hearers very clear knowledge of his meaning. But it is evident that as his text was not a sentence, so his heads may have contained one or many sentences, and that his elocution might have been good or bad regardless of the rhetorical structure of his sentences. And it ought to be equally evident that in music meter, form, structure and phrasing are entirely independent, although simultaneous considerations.

The confusion of the writers on this topic seems to have grown out of two facts: First, that in dance music (which is easiest to analyze and which is often present in classical sonatas and suites) the sentences are usually of a regular length—either four, eight or sixteen measures each; and second, that the word *phrase*, which has long been used both in music and in language, expresses in the latter the name of something that is always shorter than the sentence. A phrase in language is not an integral part of a sentence, many sentences contain no phrases, but a phrase is never longer than the sentence containing it.

The phrase in music should have one fixed invariable definition. Here is the gist of the whole matter and if one will fasten this definition in mind and never lose sight of it, the whole matter will be cleared of all confusion, or would be but for one lamentable fact. The definition as related to music is this: *A phrase consists of all the notes under one slur.* That is the whole story. A slur may cover two notes or a whole page; and the phrase thus marked may even include two or three sentences, any number of measures, and be partly within and partly beyond a subject; it is yet a phrase if it is covered by one slur. The expression "phrasing" as applied to a performance always means the observance of slurs or their absence (staccato notes) and nothing else. The word *phrase* should always mean a group marked out by a slur and nothing else. Now for the "lamentable fact," which is that a man in high authority in the musical world, I mean Herr Riemann, arguing correctly that slurs and phrases belong together, but having a wrong conception of the meaning of "phrase" he has transferred the slur to the use of marking the subdivisions of a sentence, and has introduced new marks to signify that which has always been indicated by slurs. And Riemann has secured a following, and with Germer and other editors has put out editions of classical works through even such a great publishing house as that of Breitkopf and Haertel, with this new and unwarrantable use of the slur. A slur should always mean: Attack, connect, detach, thus marking a phrase; and hence slurs should never be crossed or doubled. No other mark will serve their purpose so well, and if one wishes to introduce marks of punctuation (which certainly have their purpose but were not thought necessary by the great composers even down to the present) let them be either new marks or (perhaps better) the commas, colons and periods of literature.

In view of all that is said about it of late, it is remarkable how little phrasing is indicated by Beethoven himself in this and other sonatas. He has seemed to think that music consisted of melodies and harmonies cast in suitable forms, and that interpretation was a matter for the performer. One would find it practically impossible to interpret without phrasing, but that authorities may differ on the phrasing appropriate to a particular passage is abundantly shown by comparing different editions. Original editions are now very difficult to obtain, but the Augener Edition edited by Mandiczewski, endeavors faithfully to reproduce the original without alteration and as accepted after careful study by Nottebohm. An examination of the two triplets in measure 8, first movement, will give an instructive instance of the variety of opinion among editors, and of the difficulty of knowing now just what Beethoven intended. The Augener edition gives two slurs over these triplets, each covering three notes, with the second three marked by staccato dots. All the other editions that I have examined also give these dots, but Germer adds dots also to the second and third notes of the first triplet. He has no slur, but includes the first note of the first triplet under a slur which he draws himself, beginning with the second beat of measure 7, bass voice. This first note of the triplet he gives a separate hook, barring the next two notes together, and giving the following three a single bar. Lebert bars the two triplets separately, but he adds a bass slur which begins with the first note of measure 7, and extends to the first note of the triplets; this note is provided with a staccato dot, and then a slur runs over the second, third, and fourth notes of the triplets, the fourth, fifth and sixth having the usual dots. Epstein (Vienna Conservatory Edition—in many respects the best edition I know) has a slur over the first triplet only, the remaining three notes being dotted.

The passage beginning with 13, has in Augener, no marks of phrasing, except in 22 and 24, where the marks over the little runs and following eighths are as in all other editions. But Leibert has a slur over the first measure (13), staccato eighths and tenuto quarters, two note phrases for the left hand in 15, 16, 19 and 20 (excluding the first note of the latter measure), a slur over the left hand part in 21, and two slurs for the right hand runs, and one for the left hand in 25. Germer has fewer staccato notes, and no left hand slurs in 20, but he uses slurs over all the 16th notes, the first covering one beat, the next three covering two beats each, the next covering ten beats, etc. Epstein, as usual more faithful to the original, has the second, third, and fourth note in bass of measure 20 under a slur, has staccato dots over a number of 8ths, and inserts the words "(non legato)" twice.

But I have no intention of making a comparative study of phrasing, as that would be a very laborious undertaking of doubtful value. It may be said in a general way that the fact of phrasing is of more importance than its form. Certain passages clearly indicate their proper phrasing to one of good taste and thoughtful habits of interpretation, and in doubtful cases one is safe enough in following the suggestions of any good editor or teacher. But the student should not fail to note carefully the markings in this respect, and to clearly articulate the groups with proper interpretive accents and detachments. It remains in a final article to call attention to the structural and formal groupings. The important point in the present chapter is the clear definition of the phrase, and the recognition of it as a consideration entirely distinct from and independent of both the sentence and the measure.

What Ruskin has written on Music and Painting may be concluded with his beautiful description of one of the frescoes in Santa Maria Novella, Florence. The fresco consists of Simon Memmi's figure representing "Music" following that of "Reason":

"After learning to reason you will learn to sing; for you will want to. There is so much reason for singing in this sweet world, when one thinks rightly of it. None for grumbling, *provided, always, you have entered in at the strait gate.* You will sing all along the road then, in a little while, in a manner pleasant for people to hear. Simon Memmi means that *all* music must be 'sacred.' Not that you are never to sing anything but hymns; but that whatever is rightly called Music, or work of the Muses, is divine in help and healing.

"Jubal is the inventor of musical instruments. Tubal-Cain, thought the old Florentines, invented harmony itself. They, the best smiths in the world, knew the differences in tones of hammer strokes on anvil. Curiously enough the only piece of true part singing, done beautifully and joyfully, which have heard this year (1874) in Italy was out of a busy smithy at Perugia. . . . You think Tubal-Cain very ugly. Yes, much like a shaggy baboon. . . . Men must have looked like that before they had invented Harmony, or felt that one note differed from another, says Simon Memmi. Darwinism, like all widely popular and widely mischievous fallacies, has many a curious gleam and grain of Truth in its tissue."—*The Strait Gate, p. 134.*

FOR THE YOUNG PEOPLE

The Young Musicians' Perseverance Club.

Conducted by ARTHUR L. MANCHESTER.

The exhilaration of October air is putting energy into our activities and is sending our blood tingling through our veins. The Summer vacation was a joy, its pleasures are remembered with delight, yet the keen enjoyment of life that many find in the cool, enlivening atmosphere of October is even greater. The writer looks out from his study window on a range of beautiful hills, crowned with trees, the green of which is changing to the brilliant colors of Autumn. Each morning brings a renewal of the zest with which the day's labors are begun, the October air, keen and invigorating, filling the lungs with health. After the heat of Summer this is an experience worth having. It is pleasant to take up one's duties and plan another year's campaign.

Our club members are scattered throughout the entire country, some in cities, others in the country. Some are in the South, others in high altitudes. Some are doubtless enjoying the same experience as the writer. Others, mayhap, are not so fortunately situated. But *all* can plan and accomplish. Now, what are your achievements to be before the next Summer vacation arrives? Some changes will be made in the club work before long, and we want our members to rally around the colors preparatory to a year of honest, earnest work. In the November and December numbers we want to print letters from every member—letters that will unite us all in musical fellowship. We will not dictate as to what you shall write, but write something that will help us to make a grand rally. Address them to the editor, at Wellesley Hills, Mass., and send them early so that he can have them printed in these two issues.

We did not print the answers to the August questions, with the names of those who answered them, in September.

1. An order of monks, established by St. Benedict, in the sixth century.
2. Loud and lively music played by an orchestra to announce the entrance of important persons.
3. An ancient musical instrument.
4. An ancient poet and musician.
5. The wife of Orpheus.
6. Gluck.
7. A fable or legend.
8. An underground world—the abode of lost spirits.
9. The abode of redeemed spirits.
10. A monster, in the shape of a dog, guarding the entrance to Hades, and usually represented as having three heads.

The vacation letters, which were called for in September, are coming in, and we will dispense with our story this month and give the space usually occupied by it to some of these letters. There is so much to be learned from each other that we ought, as club members, take pains to see that the interchange of experiences is full and free. We have just finished a long vacation and are settling down to our work with nine or ten months of practically uninterrupted labor before us. What shall the harvest of these months be? Will they be months of *labor* only, or will they bring pleasure as well? What are our plans? How do we propose to carry them out? These are important questions and we should be able to give them definite answer. It will help us to use the Club page as a medium for exchanging hopes, plans and experiences. The letters which follow tell of vacation experiences.

I am not so certain but that this member did have a pretty good vacation after all. It brought a change in duties and was productive of progress—two excellent things. The photograph came to hand and is appreciated.

ELIZABETH, N. J.

Mr. A. L. Manchester, Dear Sir—In reply to your request I will sit right down and write how I spent my vacation. I received two invitations, one from Chicago and the other from Point Pleasant, N. J., but could not very well accept them. I promised a young minister, from the Bethany College, Lindsborg, Kansas (Swedish Lutheran), to assist him as organist during vacation. On Sunday morning we have services in this city, in the afternoon in Perth Amboy, and in the evenings in Plainfield, N. J., and, besides, we have had some weekly services. The services have profited me very much, despite the hot weather, as we use the full liturgy or high mass Some of my friends have been urging me to study drawing, as I have always been the best drawer in my classes. I decided to take the study in architectural and ornamental drawing and am doing very well in this work. I have spent the days betweeu the piano and the drawing-board. And this was my vacation which, I think, was not much of a vacation. When I read my letter in one of the recent numbers of THE MUSICIAN I was greatly surprised and rather ashamed, too, that I did not send my photograph before, and thought to myself: "Why, wasn't I a dunce!" Well, that letter reminded me of the photograph, which you will find enclosed.

Sincerely yours,
JOHN C. JOHNSON.

Here is a thoroughly good letter. The very tone of it helps those who read. We do not need always to tell a tale of work to help others, the spirit with which we take life and then give of our riches to others is most helpful. The spirit of help is here, and we hope those delinquent will profit by it.

ST CECILIA'S CIRCLE, MCSHERRYSTOWN, PA.

Dear Mr. Manchester—So you want to kuow how all the Club members spent their vacation? Well, although I had a glorious time, I am afraid I have had no experiences that would be either interesting or profitable to the other members In the first place, I simply forgot there was such a thing as a scale or study during the whole Summer. I am awfully sorry you had to work, but I am sure you felt fully repaid by the beautiful musio at the concerts of that convention you attended. I have heard nothing except Nature's own exquisite music, but I found it impossible to work while the birds were singing and the "winds softly murmuring among the trees and flowers." Don't you think it requires a great deal of perseverance to resist all that? In spite of my neglect I love music better than ever, and have fully determined on a hard year's work. I received part of that inspiration from Florence Cross; she certainly doesn't lack perseveranee. During the Summer a few of us have been trying to get some of the delinquent club members to again join our ranks; several of them have written and promised to do so. Hoping that they will, and that our beloved Club will, each month, grow more successful, I am,

Sincerely yours,
MARY R. KEEFER.

What do you think of this, Clubmates? Went twenty miles to take music lessons each week! That looks like business, doesn't it? Well, that is the kind of members the Young Musicians' Perseverance Club has. May they all do as well.

CRESSON, TEXAS.

Dear Mr. Manchester—As you ask each member to write and tell you how they spent their vacation. I did not have any vacation. I went six miles to school last year and had a fine music teacher, and when school was out I just kept on studying, and have gone twenty miles every Saturday to take my music lesson. I am so interested in my music with my present teacher that I will keep on taking from the same teacher. Our school commenced on the ninth of September but I did not start, but will start soon. It is a long ride. I spent my Summer in studying and practicing. Best wishes to you and the Club.

Yours truly, M. AGNES ROBERTS.

We welcome this member and will expect some good answers from her.

FINDLAY, OHIO.

Dear Mr. Manchester—Several months ago I asked to be admitted to the Perseverance Club, but I have not answered any of the questions yet. As vacation is over and I am now ready for work, I enclose answers to the questions in the September number of THE MUSICIAN. My vacation was pleasantly spent at home. I kept up my practicing throughout the Summer. I have been studying Grieg's "Norwegian Bridal Procession" and a "Valse Caprice," by Frederick Messick. My teacher, Mrs. Bacon, says that I will soon be ready for the fifth grade in the National Graded Course. I have written, what seems to me, quite a long letter. So, with the best wishes for the Club's success, I am,

Sincerely yours,
STELLA BENNETT.

Faces grow to reflect what is within. A selfish life will transform a sweet face into a hard, unlovely one. If our Club members will cultivate the traits which make lovely their faces will show it. So, too, it is the cultivation of the finer tastes that make good musicians.

POMONA, FLA.

Dear Mr. Manchester—I received my September MUSICIAN Saturday. I did not have to look up any of the questions, excepting the fifth and ninth; I kuew them all. I have read so much about Nero and the people of his time that I am quite familiar with the history. I have read that "Saulus of Taurus," or Paul, was beheaded. The story says he was stoued. Authorities differ, I suppose. I have read about the burning of Rome many times. I was reading a piece, the other day, about Nero. I suppose you probably have read the same. Two busts were standing side by side. One was of a little child with a sweet, little face. The other was of an old man with a hard, selfish, cruel and almost savage faee. It said that it did not seem possible the two could have been the same. My school begius to-morrow and I will have to work hard at my books. My studies for this year are: Algebra, geometry, English literature, physical geography, general history and Latin. I expect to take up Cæsar the last of the term.

Yours truly,
EMMA L. OLMSTEAD.

Our members will rejoice with this one in her good fortune. And her cordial desire to have her friends write to her is good.

CHICAGO, ILL.

Dear Sir—Although I have almost passed the limit of time given for answers I shall send mine, hoping that their tardiness will not discommode you. If you remember, I wrote several months ago, saying that I had entered a contest for the diamond medal given by the musical college I atteud. Well, I was successful, more successful, I fear, than I deserved to be, and received the diamond prize, the highest honor. My medal is very beautiful and I shall prize it greatly all my life. I find I have several friends in the Y. M. P. Club, and hope they will write to me. Thanking you for your good wishes, and wishing all good success to our Club, I remain,

Cordially yours,
ANNA MAY BARTLETT.

This is one of our most faithful members. Her wish for her clubmate's success is happily satisfied.

IRONTON, OHIO.

Dear Mr. Manchester—Enclosed find the answers to the questions for August. I hope soon to see the pictures of our members in THE MUSICIAN. I have finished my sonatines, and will take Mozart and Haydn Sonatas; Czerny, Op. 299, Book I and II; Le Coupey, Op. 26; Bach's Inventions, Book I; Mendelssohn's Songs Without Words; Löschhorn's Studies in Technique, Op. 65, Book III; Schumann Album for the Pianoforte, and Sonatine Album. I have taken several nocturnes of Chopin's, among them Op. 9, No. 2; Op. 37, No. 1; and Op. 55, No. 1. I enjoy my music very much, especially since I have been studying the pieces of the old Masters. I think it would be grand if Anna May Bartlett could win that medal. Few of our club-members (who do not attend a musical college or conservatory) have a chance to enter such a contest, and I hope those who are so fortunate to do so, will always be successful. I have been memorizing several pieces of late, and I think it profits a student to do so. Wishing future success to the Club, and hoping that all of its members may become great musicians, I remaiu,

Your devoted Club-member,
JEANNIE C. DAVIS.

It is good news that the Young People's Page attracts those who casually read it. We will try to keep this new member interested.

INDIANAPOLIS, IND.

Dear Mr. Manchester—I began my subscription to THE MUSICIAN with the May number of this year, but I didn't give it much attention until after the close of school. One day in July, at my leisure, I picked up the June number of the magazine and read about the Bach Festival at Bethlehem. Upon looking through the magazine I read the letters from the members of the Club, and also the story, "Two Musical Missionaries." I became greatly interested by the time I finished the story, for it was something I hadn't noticed before. I am very fond of music, and anything that pertains to it bears great interest to me. For this reason I think we all should thank Mr. Manchester for his kindness. I am sure I appreciate it. I have takeu lessons for the pianoforte about a year and a half. Each day I find music a greater enjoyment. I sincerely wish to become a member of the Club, and to its interest I have tried to answer the questions correctly. They are enclosed on a separate sheet of paper. Now to the many friends whose names appear on the page for the Young People, I extend my love and wish of success to the Club. Thus, I enter with a sincere desire to be acknowledged as

Your new Clubmate,
BESSIE M. SPRINGER.

A MORNING CALL AT WAHNFRIED.

The broad avenue, flanked by smoothly-kept lawns bordered with nut trees, which leads to Wagner's home, called by him "Wahnfried," is already familiar to thousands. During the festival season, in Bayreuth, the stream of visitors coming and going is constant. They walk along the shady path up to that place, before the house where stands the statue of King Ludwig, and then return. Others, introduced as new acquaintances or old, go beyond that spot to enter the hospitable home. From ten in the morning till twelve the daughters of the house receive, and many delightful memories of these receptions have Americans cherished.

Frau Wagner has four daughters—one a countess, one the wife of Professor Thode, who declined a call to Berlin, to remain at Heidelberg; and the marriage of Isolde to Franz Beidler, last December, left Miss Eva, the unmarried one, at home.

This Summer the writer, with some American friends, enjoyed a chat about music and America, with the inmates of Wahnfried. Siegfried Wagner was in charge, as conductor of The Ring and, at the side of his mother, had just driven away in a carriage. The daughters speak excellent English, though deprecating their lack of freedom in conversing, saying: "We speak it rarely now; we have had little practice in its use, since childhood, with grandfather (Liszt)!" They inquired, with interest, of Seidl's work in America and of his successor, Paur. Of Leopold Damrosch they had heard. They were surprised to learn that no subsidy is given to opera, in America, and asked many questions as to the opera's support and the taste of the American people. One Englishman occupies a high place in the estimation of the family, *i. e.*, Houston Chamberlain, and his new book on art, that has aroused enthusiasm from the Kaiser down was, naturally, a topic of conversation. From the reception-room we went into the famous Saal and, passing through the music-room, saw a familiar edition of Beethoven's sonatas upon the pianoforte. An unusually large bay-window adds to the breadth of the salon—a room lined with crowded book-shelves and carpeted with choice rugs. Portraits of Frau Cosima Wagner, by Lenbach and other artists, as well as the originals of Wagner's picture, familiar in the Old and New World, arouse greatest interest. In passing, we will add that another topic of interest was the new mounting and the contracting into one act of "The Flying Dutchman"—these due to Siegfried Wagner—spoken of by European critics with approval nearly unanimous.

Guests were constantly entering and alluding to the busy life of Frau Wagner and the share of the children therein, and Fraulein Eva laughingly remarked that an old friend had said that each daughter, however, was only a fourth of the mother. "The right hand of her mother," Miss Eva is called, and she speaks of the life at Wahnfried as "quite ideal." To the visitor, however, was plainly seen that the life there is, by no means, one of dreams, but one passed amid busiest realities of modern times. Moreover, in the hospitality offered at this home, where associations with Wagner make all so exceptionally interesting, was shown a lovely spirit of *noblesse oblige*. The greater privileges in music's world enjoyed by the daughters of his house seem to make them feel "the more bound to be sweet and serviceable" to others.

CLUB WORK.

Music Department of The Woman's Club, Athol, Mass.

It was under the supervision of this club that the excellent musicale, mentioned in the September number of The Musician, was given by pupils of Miss Carrie Delle Hosmer. Many other clubs now planning the year's work will be interested in the study of a music department of an active club, a program of which we give in full.

MISCELLANEOUS.

Piano Duet—Overture from Raymond. A. Thomas.
Vocal Solo—"Before the Daybreak." Nevin.
Quartet—"There's One that I Love." Hawley.

Vocal Solo—"The First Violet."
Piano Solo—Hunting Song.
Violin and Piano—Spring Song.
Vocal Duet—"Maybells and Flowers."
Vocal Solo—"On Wings of Song."
Piano Solo—Rondo Capriccioso.
Paper—Letters of Mendelssohn.
Sketch of "Ruy Blas."
Piano Duet—Overture of "Ruy Blas."
Mendelssohn in Oratorio.
Paper—Evolution of the Oratorio.
Story of "Elijah."
Duet—"The Overture."
Solo—"Elijah, Get Thee Hence" (Now "Cherith's Brook").
Soprano Solo—"What Have I to Do With Thee?"
Alto Solo—"Woe Unto Them Who Forsake Him!"
Soprano Solo—"Hear Ye, Israel!"
Trio—No. 28, Angel Trio.
Angel Chorus.
Alto Solo—"O Rest in the Lord!"
Paper—St. Paul.
Solo—"Jerusalem, Thou that Killest the Prophets!"
Arioso—"But the Lord is Mindful of His Own."
Paper—Hymn of Praise.
Vocal Duet—"I Waited for the Lord."

FOLK SONGS AND NATIONAL AIRS.

Paper—Folk Songs.
English Folk Song—"Sally in Our Alley."
Norwegian—Instrumental, by Grieg.
Indian—"In An Indian Lodge," by McDowell.
German—"The Lorelei."
Negro—"Old Folks at Home."
Song—"How Can I Leave Thee!"
Spanish—Piano Solo ("Paloma").
Paper—National Airs.
French—"Two Grenadiers," by Schumann.
Group of National Airs.
"Star Spangled Banner," with variations.

MENDELSSOHN AS A SONG WRITER.

Paper.
Vocal Duet—"In His Hands are All the Corners of the Earth."
Songs—"The Bouquet," "Under the Trees," "Maid of the Ganges," "In Autumn."
Consolation.
Quartet—Slumber Song.

CHARACTERISTICS OF VARIOUS COMPOSERS.

Paper—Life of Nevin.
Vocal Solo—"O That We Two Were Maying!" Nevin.
Vocal Solo—"The Rosary." Nevin.
Paper—Life of Verdi.
Soprano Solo—Scene from "Il Trovatore" (with concealed chorus).
Paper—Life of Gounod.
Piano Solo—Cradle Song (Romance for Piano).
Solo—Flower Song, from "Faust."
Piano Solo—Soldiers' Chorus, from "Faust."
Violin Solo—Ave Maria.
Paper—Life of Sullivan.
Paper—Sullivan as An Author.
Solo—"The Lord is Risen."

On the program, at the year's close, were these two selections:

All one's life is music if one touches the notes rightly and in time.—*Ruskin.*

Music was not given to men by the immortal gods with the sole view of delighting and pleasing the senses, but rather for appeasing the troubles of their souls and the sensations of discomfort which imperfect bodies must necessarily undergo.—*Plato.*

The St. Cecilia Club, of Terrell, Texas.

This St. Cecilia Club was organized through the club extension committee of the Social Science Club, March 21, 1901, with nineteen charter members. At the third meeting the membership, which was limited to thirty, was full. The club joined the State Federation May 1, 1901, being six weeks old. The course of study of the club is the lives, compositions and literature of the great composers. Mrs. A. B. Griffith is the president.

The Wednesday Morning Musical Club, of New Castle, Pa.

This club has issued a very tasteful book for the coming year. The club colors are green and white and the book is bound and printed in green. The club motto is, "Study only for the best, for life is too short to study everything."—*Bach.*

The greater part of the year is to be devoted to the different operas, a short sketch to be read, followed by selections from the opera chosen for the day. Other authors selected for partial study are Arthur Foote, Fields, Brahms, Schumann, Chopin, Beethoven, Gounod, Bach, Rubinstein, Schütt, Strelezki and Schytte. The club has two open meetings during the year, given by its own members, and from three to four recitals by artists.

The Ladies' Monday Musical Club, of Fairmont, Minnesota.

Several music-lovers in the above-named town, desirous to know more about the authors of good music formed, in 1899, a music club. To the seven members of the first year were soon added eleven, whose interest constantly increased. The calendar, for the first year, consisted of successive "Character Studies," principally of popular writers. Work of the second year showed greater variety and larger scope. History and form were considered as well as woman's work and American music. As in all other clubs, the members, fortified by above preparation, are now enthusiastically advancing to deeper researches. Mrs. R. S. Jackson is secretary, and the club, though limited by its by-laws in membership, extends hospitality to guests from other towns.

Opening Theme of Boer National Hymn.

THE PUBLIC SCHOOL MUSIC TEACHER OF THE TWENTIETH CENTURY.

J. W. BREMER.

In the July number of THE MUSICIAN I find a very interesting article, under the above title, by Henry M. Butler, a gentleman, who is an acknowledged authority on subjects pertaining to Public School Music, and who has done much for its development. The different points given are valuable and practical, but I do not think they exhaust the subject, and I here add to them some observations from my own experience.

Instruction in singing should begin with the child's entrance into the school. It seems against nature and reason to withhold from the child a branch of learning, which it has pursued long before it had attained the proper school age, and which will have a beneficial effect upon the child's health, provided it is moderately employed and properly regulated. Nevertheless it is a deplorable fact that so many of our children's voices are utterly ruined as the result of excessive straining in earlier years. Loud and boisterous singing is not only dangerous to the healthful condition of the vocal organs, but also to the quality of tone and to good taste. For this reason the teacher must, first of all, suppress all loud singing and shouting and demand, most authoritatively, that all singing, in or out of the school-room, shall be done in a soft and mellow voice, with great caution and without strain or force whatsoever. The motto should be: "Purity, not noise, is power."

Every teacher should endeavor to add some work in ear-training to his regular music course, no matter how simple the work may be. As music is something to be heard it is essential that the training of the ear, the principal organ of the musical sense, should be an integral part of the child's musical education. But, strange as it may seem, this subject has been greatly neglected in our public schools heretofore. For the sake of suggestion, I outline some work in ear training, which may prove helpful. The exercises are sung or played (violin preferable), first by the teacher, sung after him by the pupils, the latter then giving decisions regarding pitch names, relative length of notes, etc.

1. Short melodies, not more than two measures, consisting of four, six, eight notes, moving ascending and descending in successive seconds. (*Do* is the first note always given. Only notes of equal length are used).

2. The same as 1, but the melodies extending over four, five, six, seven, eight measures.

3. Exercises to determine the number of beats employed in each measure. The first tone of each measure is to be strongly accented. Only notes of equal length are used.

4. The pupils learn to distinguish by ear between two different kinds of notes, the one having half the value of the other; for example, whole and half, quarter and eighth notes.

5 The pupils learn to distinguish between three different kinds of notes, their values being in proportion as 1:2:4. No dotted notes are used.

6. The same as No.'s 4 and 5, with dotted notes added.

7. The pupils learn to distinguish the intervals of the third, fifth and octave. *Do* is given and is the lowest note used. The pupils name the upper note.

8. The pupils give the name of the interval only.

9. The intervals of the fourth and sixth are treated as the intervals of third, fifth and octave.

10. The interval of the seventh.

11. Various intervals, the lowest note given, the pupils naming the upper.

12. Various intervals, the upper note is given, the pupils naming the lower.

13. Short melodies consisting of various intervals, different kind of notes. The pupils give the pitch names, the number of beats employed in each measure, the length of the notes and the names of the intervals.

14. After the minor keys are introduced, the pupils learn to distinguish between major and minor thirds, sixths and sevenths.

As writing goes hand in hand with reading in our public schools, so should it be with reading and writing music. Of all the pupils who annually finish the music course in our schools, very few are able to write notes, clefs, rests, etc., neatly and legibly. Their proficiency in music writing consists of drawing signs, to discover the mysterious meaning of which would occupy much time even for the most skilled and sensitive eye. There is nothing so adapted to create interest, to help the pupils in distinguishing between the different musical characters, notes, rests, signs for expression, etc., and to lead the pupils to study and remember their significance as the copying and writing of music from dictation. A few minutes each week thus occupied is time well spent. Writing of music will quicken the child's perception, develop accuracy, patience and mental grasp.

After various exercises, pupils should occasionally copy a song from the blackboard. Another very good exercise is the following: A short melody is played or sung by the teacher, repeated several times by the pupils and then, after the first note is given, written down by them. Occasionally, the pupils are urged to write short phrases of their own invention. This will create interest and make them *think* music. The exercises, given under 9 in Mr. Butler's article, are splendid.

Mr. Butler, in his article, makes a sharp distinction between music teachers and "tune" teachers, calling by the last name those teachers who neglect the technical course of music instruction in favor of the song course. There may be many teachers who are guilty of the sin, but in my estimation, there is a far greater number who favor too much the technical course and neglect the song course. To them, exercises, notation, clefs, staff, rests, intervals are all in all, and the singing of songs of little importance. There are too many teachers who seem to think that the learning of notation and singing at sight is all there is of music and forget that the mechanism of music and music itself are two different things. The object of music teaching in our public schools should not only be to give the pupils a knowledge of the elements of music, but that the children should learn to love music for its own sake—should know it as an enjoyment and use it in and out of the schoolroom. A boy of a school where music had been taught during the last year, was asked how he liked it. "Well, sir," he answered, "we don't have to like it, we only have to learn it."

Considering the vast number of hours daily spent in teaching music in our schools, the great number of schools which claim the advantage of musical instruction and the multitude of teachers who make this special branch of education their sole profession, it seems strange indeed, that the very walls of our homes, the plains and the hills and the sturdy trees of our forests do not resound with the echoes of our children's songs. How many of our children sing at their plays, in their walks, at home around the fireside? Very few, indeed. And what do these few sing? The jingling nonsense of the camp-meeting nature—*a la* Sankey—so adroitly taught in thousands of Sunday-schools all over this broad land, jigtime revival hymns which are nothing more than poorly disguised waltzes and two-steps, Coon songs and popular "stuff" with superficial music and frivolous, and not unfrequently immoral text "trash," that sees the light to-day and is buried to-morrow to make room for something equally shallow. It is the duty of the public school to be a mighty bulwark against the vitiating effect of worthless and unmusical productions of this kind. The school owes it to its pupils to give them something better instead, in songs which will live and never die. "Why will you be satisfied to drink out of a puddle when you may drink at any time out of pure and cool fountains."—*Karl Merz.*

There should be more teachers who remember the power of song, to fix in the memory the sentiment with which it is connected, and to foster the same in the human heart. Who can forget the songs of childhood days, the songs once sung at play, at home, at church and school; the songs which a dear mother sang to us? The impressions made upon the youthful memories by song are likely to be indelible. There is nothing that so haunts the spirit in the memories of days gone by as the songs of our childhood. We may have crossed oceans and wandered among strangers in foreign climes; we may have grown old and feeble; gray hairs may cover our temples; we may be lonely, home- and friendless, the sweet tones of mother's voice will linger in our heart long after she has passed "beyond the river." The old and mighty chorals, first heard in that small unsightly chapel, creep up in our memories long after its walls have crumbled to dust. Old scenes, old places, old friends, old love, all will return to us with the old songs of our youth. Our eyes may refuse to shed tears, but our hearts will thrill with emotion indescribable. Shall we let this tremendous power of song pass by, unused, shall we not lead it into the proper channels and wish it for the good of the coming citizens of our nation?

The teacher can not be too careful, too critical in the selection of songs for his pupils. Not only should he be mindful of the fact, that the songs should be chosen with a view of the season of the year, the approaching of national and Christian holidays, the phase of work in hand in history, literature or other branches of education, but also consider if both text and music possess the proper qualifications to elevate and refine the taste, to stimulate genuine enjoyment, instil hope and courage, sympathy and charity, love for nature and mankind, loyalty to country and home, devotion to the Infinite. It being true that "the child is the father of the man," it is also true that it is within the power of the school to change public attitude towards real and noble music, to educate the masses, to understand better things in life, to improve the taste and make song the daily companion of every human soul, so it may "drive away weariness, lessen the painful realities of life, and strengthen the courage to meet danger."

Confucius said: "Wouldst thou know if a people be well governed, if its manners be good or bad, examine the music it practices." If this be true, the public school must hasten to change the present state of affairs. Is it not a lamentable fact, that in the rush and hustle of American daily life, sentiment has been nearly crowded out? The public school can change this deplorable condition by giving its pupils not only exercises for the mind, but songs for the heart, by sending them out into life with a treasure of beautiful melodies which will be their solace in disappointments and failures, will heighten their joy and lessen their grief, by using only the best music obtainable, and by doing this, elevating their musical intelligence and helping them to appreciate the dignity, magnitude and beauty of true music. Balzac said: "The greatest man is a poet. Every one can not be a poet. The next greatest is he who appreciates a poet." All men can not be made musicians, but mankind may be educated to appreciate music and to profit by his influences. The Public School music teacher of the Twentieth Century will teach his pupils songs which will meet the above requirements and will find their practical application in the future life of the child when schooldays have long been a thing of the past. Let me quote a few words from M. B. Anderson, which so truly illustrate the usefulness of song and its worth in life: "A woman who can not sing, is a flower without perfume. There may come a time when a weary little head lies on its mother's bosom, when little eyelids are drooping, twilight is drawing about her—too early for a lamp, too early for any but little folks to sleep—then it is that all the accomplishments of her girlhood are as nothing compared with one simple song that lulls a tired baby to sleep."

The Public School music teacher of the Twentieth Century will know that music is the language of the soul, and that however fine the execution, however perfect the harmony may be, without expression it availeth nothing. It is one of the great evils of our days, that the authors of song collections give too small an amount of care to supplying them with the proper expression marks. But this is no justification for the bad style of singing so largely prevailing in our schools. Here the teacher's individuality must show itself. He should be spirited enough to place himself in sympathy with the text underlying the music. Quick in perception, he should look beyond the mere words and notes, call into activity the pupil's emotion, more by the impulse of his own feeling than by explanation. There is much said and written about musical expression, but musical expression can be taught by inspiration only and not by explanation. The teacher who possesses the God given power of awakening the pupil's emotion to draw forth the meaning of song, may be envied and undoubtedly will harvest rich results from his pedagogic labors, conquer all difficulties and succeed in making the hour of song the most interesting and delightful hour of all school hours.

The Public School music teacher of the Twentieth Century will be a mighty power in hastening the time when foolish parents will cease to think that music is unmanly and effeminate; when the ambitious boy can enjoy his fiddle scraping in a place more convenient than the attic; when music in divine worship will not be committed exclusively to two ladies, two gentlemen and the organist in the choirloft; when church music will be divine indeed, dignified and fit for devotion; when the American people will sing songs, good and true, everywhere, in street and field, in workshops as well as church and parlor, in humble cottages and costly palaces.

METHOD IN PIANO TEACHING AND PLAYING.

W. F. GATES.

Some time ago the present writer was rash enough to publish an article on piano methods. The editor of THE MUSICIAN, evidently thinking that one, who has come through alive, is able to travel the same road as *de capo*, suggests a repetition of the first theme—in the line of a delayed encore, I suppose. Perhaps, had I known the ire that my guileless little article yclept, "What Method Do You Teach," would arouse, I might have feared to enter my humble ideas of this matter for public inspection. There is a saying, you know, to the effect that certain parties of idiotic tendencies hastily enter where celestial beings are afraid to perambulate. However, when I "rushed in" I found myself in good company, such as Edward Baxter Perry, Alfred Veit, William Calhoun and others, and was glad to find that such able writers as these, gave even more hearty, and certainly more able, condemnation to the "exclusive method" idea.

I do not know that I can, at this time, give a more comprehensive resumé of these ideas on the subject of piano method than to make my article largely one of reference to what has been written from the point of view that a good method, so-called, is not playing the piano in a manner that was discovered by the "methodist," as Mr. Perry calls him, and used exclusively by him and his pupils, but is an eclectic grasping and putting into use the best points that have presented themselves in perhaps a dozen or a score of years of study and teaching from all available sources.

The good points of piano playing and teaching are so many and spring from such a variety of sources that one is able to state, without fear of successful contradiction, that a teacher or player who does not proceed on the widest eclecticism cannot be a success. In fact, they do all come under the head of eclectics; but the trouble is that they will not acknowledge it. All good piano playing is simply a "survival of the fittest." There have been no new principles of playing in the last half century or thereabouts. But our friends, the methodists, would have us believe that new ideas, new facts, new principles, have come into being through the persons of themselves or their teachers, and it is only through a flaw in the copyright law that they are not the exclusive users thereof. If I may be allowed to quote myself:

"There are some teachers that think they have a plan of teaching technic that is different from what is nsed by the common herd; something that no one else knows or can use but the originator and his pupils' pupils down unto the seventy-seventh generation. It is surprising, but some of them do really believe this. Whereas, they have nothing in their teaching that is not used by any good teacher of common sense and good judgment. Let one know all he can about one method, if he can find one that really deserves the name, and let him learn all that he can of other peoples' way of doing things. And by this plan of weighing and comparing and giving practical trials he can choose for himself the things that seem best. Then he has a good method."

In reply to this article from which I have just quoted came an answer of which the following is a part:

"Most teachers are routinists and cannot strike out for themselves, for the simple reason that they have not the brains to do it. I freely place myself among these. In piano playing, Leschetitsky is the most sought-for teacher of the day, and, as everybody knows, he demands that pupils shall study with one of his preparatory teachers for a year before he will accept them, in order that they may first master his method."

This brought the matter at once to the much discussed Leschetitskyism, where all recent sticklers for method seem to land sooner or later. But in the same number of the magazine in which the above appeared was an article by Alfred Veit, a pupil of Leschetitsky, and a pianist, teacher, and writer of recognized high standing. Certainly, Mr. Veit could speak *ex cathedra* concerning a Leschetitsky method if there was one, and from him this wonderful method would receive full praise for its originality and its comprehensive results. For there is no doubt that the old teacher was a great maker of pianists. Now notice what Mr. Veit has to say:

"As to all the stuff and nonsense that has been written concerning Leschetitsky's method, suffice it to say that Leschetitsky has *no fixed method*. Leschetitsky's ideas concerning the true principles of piano playing are those that have been handed down from time immemorial. Thus, the well-known adage about there being "nothing new under the sun" holds true in regard to Leschetitsky's method as well as in other respects. He has maintained again and again that his teaching is based upon rational principles that have been taught since the origin of piano playing."

The fact that Leschetitsky taught on the principles that are as old as the origin of piano playing and incorporated into his teaching all that he found good from whatever source, was what made him a great teacher. And what made him a still greater one was that he was not ashamed to say so—that he disclaimed the "Leschetitsky fetichism" that Mr. Veit speaks of.

When teachers of musical history don't know who originated a given feature of musical rudiments or usage, they generally charge it up to Guido and let it go at that. The probabilities are that such old worthies get the credit of much more originality than they possessed. There is no doubt that most of these rudimentary features were used for many years before the one to which we credit them put them on paper. For instance, the running together into groups of eighth and sixteenth notes is credited to John Playford, the English writer. But I have a German hymnal of 1860 which uses the same system, years before Playford's publications.

And so it is with methods. Finger technique was used before the time of Clementi; wrist and arm were freely used before the time of Cramer and Moscheles; hand stroke in octaves before Kalkbrenner; the free forearm before Kullak; a straight-backed and devitalized hand before Deppe; the pressure touch before Leschetitsky; octave skips before Oscar Raif. None of these absolutely originated the technical feature with which is so prominently associated, although he may have made that feature a leading one in his playing or teaching.

All of these were great teachers. Why? Because they used all that came to them from their predecessors and their contemporaries; they adopted each point as it proved its value to them. And each saw in one or more of these ideas that they thought had not been made enough of or had not been properly presented, developed and emphasized. So they put these things before their pupils in what they thought was the proper light and the pupils immediately credited the teacher with being a discoverer of a heretofore hidden feature of piano technique.

But all this does not say that such a teacher is not a good instructor. No; with all his false notions as to the *origin* of his ideas and his own exclusive right thereto, the ideas themselves may be the fixed principles of piano playing, old as the instrument itself and as widely used as the domain of civilized music.

Truly, then, the public may exclaim, "Why do the pianists rage and imagine a vain thing?" Quite largely for your benefit, Mr. Public, for you dearly love to be humbugged. And when you are caught in the gammon of "exclusive method" and yield up your shekels therefor, one end of the excitement is accounted for. And perhaps you will get the worth of your money. But more probably you will have been led to expect something you could get in no other place and of no other teacher and something far in advance, in its artistic value, of what might be obtained of other instructors. And that is where the humbug comes in. In this article I do not pretend to deal with the rank cases who wilfully and intentionally gull the public by some hocus-pocus of method, and especially of quick results with little practice. Any one who is taken in by the few such frauds in these days of numerous good teachers, deserves to lose his time and dollars. But it is a pity that ignorant and thoughtless, perhaps stingy, parents make their innocent children suffer that they may save a few cents. But that is another story, as Kipling remarks.

The real motto of the wide-awake teacher should be, "The greatest good from the greatest number, for the greatest number."

I cannot do better in closing than to quote a few words from the article of Mr. Perry on methods. Said he:

"Let me say emphatically, unequivocally, there is no such thing as one correct and complete method of playing or teaching the pianoforte. Any teacher who claims to have invented, or discovered, or otherwise to hold a monopoly on such a method is either a deliberate fraud and charlatan, or, what is more likely and more common, is merely a conceited, narrow-minded, meagerly-informed, self deluded crank. Beware of both!"

Which remark would certainly seem sufficiently authoritative and delightfully emphatic.

STUDIES IN CHARACTER.

WILLIAM BENBOW.

When a young student can read fairly well, the wise teacher does not select his reading matter because it may happen to contain more difficult words to spell or pronounce. Rather, he is guided in his choice by the worth of its contents, the style, or the rhetoric. In no other way can the pupil learn the richness of meaning of any word or phrase, for it is only in its various settings that we can discover its possibilities of use and beauty. The value of a word grows out of its relations to other ideas. And if this is true of words which come to have very fixed and definite meanings, how much more necessary is it that we should learn the meaning and use of tones by the same process of comparison and contrast. The value of a tone is altered so much by its place in the chord, or in the melody, or in the counterpoint, and so much by its rhythmical or rhetorical relations, that it is self-evident that we can arrive at its tone valuation only by a careful study of its possibilities and predispositions.

These chameleon-like changes in the character of a musical phrase depending upon the character of the context, it requires an exhaustive investigation of its different facets to appraise it. If it occurs in an *adagio sostenuto* it presents a radically different character trom that which it imparts in an *allegro risoluto*. So in reference to touch, if prinked out in pearly *staccato* a phrase looks very unlike itself when caparisoned in warlike *martellato*. It is a rosy pink when Siegfried is a-wooing, but it turns murky brown when the dragon gives it voice.

Can we not do something more scientific and systematic in teaching the student to appreciate this point? It is altogether likely that we are governed too much by the technical progress of the pupil when we select his pieces. Undoubtedly that must be a dominant principle until the student has a fair technic. But in grade it is possible to make a selection governed by esthetic standards, so that the pupils esthetic judgment may be broadened and refined by the study of diverse styles and their characteristics. Perhaps the most general criticism of most of our piano playing is that it is characterless, namby-pamby, nondescript. Ask the average student what the main character or sentiment of his piece is and note his hopeless look of bewidderment. We can scarcely avoid likening such players to typewriters who are content if only they strike the right keys—and the quicker, the better.

Now every type or character of musical expression is a composite of factors peculiar to itself. Each character has its own distinctive features of rhythm, tempo, touch, etc, by which it can be distinguished from every other character. And only by painting these personal features can we call up in the mind of the hearer the appropriate *dramatis persona*. One role may take a doughty, forthright attitude, but another will elude one entirely, unless with velvet touch he can breathe over it the faintest fleck of gossamer haze. The discrimination as well as grouping of these distinctive points must be made a careful study in itself, for haphazard observation will never make an artist. We must collate various types and their properties, and learn to recognize them accurately in order to reproduce them faithfully.

At the first exercises in such study can we not choose pieces bearing very marked contrasts of character and style? It seems feasible to begin with strong, clear, unmixed types—the dirge and the jig, the march and the waltz, the hymn and the hunting song, the lullaby and the tarantelle, *dolce* and *deciso*, *piacevole* and agitato, etc. Then we could introduce gradually more refined differentiations—think of the great variety of dance rhythms—which in turn would call for and cultivate a finer sensibility of the pupil's perception and also a more delicately graduated control of his technic.

Much as an artist with his side "studies" on a great picture, it is an excellent plan to take a small section of a composition and apply to it different touches, tempos, nuances, etc., so that one can settle upon some one treatment as most consistent with the spirit of the passage. The artist makes several experiments and mixes and remixes his colors on a corner of his palette until he gets the proper tint for a given effect. A like scheme is commendable to the musical colorist. This process also affords the most practicable way of bringing the player to use his technic as a means to an end. He first feels the effect needed, then by practice learns the exact technical means to realize the effect. By degrees this practice brings the artist to the point where his technic will respond intuitively and spontaneously to the ever varying demands of interpretation.

VIOLIN STUDY—POINTS.

EDITH LYNWOOD WINN.

There are many schools of the violin. All those worthy the name having some excellent points. Henri Marteau comes from the French school. He has a beautiful, but not robust tone. He plays with much elegance and certainty as regards technique. He plays with a very high arm, a frequent use of the forearm in short passages, and a loose wrist when the stroke is not lateral.

Fritz Kreisler is another representative of the French school. He has a perfectly stiff arm, an unmovable wrist when he changes his bow at the heel, and yet he produces a most beautiful and virile tone, and, though educated in a French school, his conception of the German classics is noble and true. I believe he is a pupil of Marsick.

Ysaye and César Thomsen have made us respect the Belgian school, which, as a school, is no more nor less than a half-way station between the German and French schools.

Wieniawski and Vieuxtemps founded the school or, at least, gave it renown by their eminent work. They, however, owed most to the French school, and, in founding a separate school, they did not depart much from the French system of bowing.

César Thomsen is a splendid technician. When he came to Berlin in '96-7, he did not create a sensation. He was not unique. He played a historical program that was in itself somewhat pedantic.

Tartini's "Art of Bowing" may be very interesting in the studies. It is not, in its entirety, suitable for a concert program. César Thomsen is, indeed, a splendid artist and teacher. He made no impression in America, and yet the best musicians respected his sincerity and ability. As for Ysaye, the American public rave over him. He is a fine artist. If you were to study with him he would doubtless say to you, "I play as I like. If you like your bowing, play as you like."

He has every fault of bowing in the category and yet, because he is an artist and has had the physique to practice eight and ten hours a day in his student days, he has been able to accomplish great things.

Ysaye as an interpreter wins our admiration; as an expositor of beautiful and correct bowing, he is not as admirable.

Belgium has another violinist who has attracted attention in America. He is Ovide Musin. He has neither a great tone nor a great conception. His success is based upon his clever left-hand work.

I have been somewhat interested in the new Italian school. It may not stand on solid ground, but I suspect Kreisler gained many points in his interpretation of Corelli and Tartini from some of the good old teachers who have had handed down to them the traditions of Paganini.

Leopold Auer has done great work in Russia, and to-day the Russian school is one of distinct individuality. Many Russian violinists have gone to Berlin where they gained something from Joachim, but I feel certain that Leopold Auer "set them on their feet squarely." There is something so versatile in a Frenchman but there is something so true in a Russian.

The Vienna school has long been one toward which Americans have looked with interest and respect. Jacob Grüm has done a good work in his day, as many a man who now adorns a seat in our Boston Symphony Orchestra can say: "Yes, the Vienna school is a good one, even if some of us disagree with its system of bowing."

Some one has asked me what criticism I would make upon the system of bowing now in use in Vienna and Leipzig. I have known many students of both schools and it is my opinion, although I do not care to pose as authority, that the old systems of David and Böhm have not been supplanted by the freer influence of a distinctly modern school. Pupils of Sitt and Becker, in Leipzig, have not shown to me as robust and noble qualities of tone as those of Rappoldi in Dresden, or even of Heinrich Petri.

Now I come to the Berlin school and I feel qualified to express myself very freely with regard to it. I believe that the system of bowing, as used by Joseph Joachim and his followers, is not only very modern, free and beautiful, but that it approximates perfection as nearly as possible. This may seem a very broad statement. I owe much to my teachers. Julius Eichberg was an old school man, but he did great things for Boston in the days when Boston musical standards were only in the bud. He was a great and philanthropic man for his time. We have grown beyond him, but we shall never forget to honor his sincerity. I went to Berlin with the system of bowing used by Mr. Eichberg. I became a pupil of Johann Kruse, the second violinist of the Joachim Quartette. As an interpreter, I do not think any one of the men of that school excels him, except, of course, Joachim himself. I am obliged to be personal, for I believe that my experience may help some other student who wanders to Berlin. I changed my system of bowing and I worked very hard to meet the expectations of teacher and friends. I have since studied with two representatives of the Joachim school. Professor Kruse does not care for technique, and, therefore, if one's technique is not excellent, he does not labor to make that the one thing. An advanced student with fluent technique would develop splendidly under his teaching. I may say right here that the Berlin teachers have not the slightest idea how to meet American needs. They teach the same compositions year after year and, if you are not prepared for their grade of work, you must wrestle with those identical compositions just the same.

I was once playing the Bach Concerto in A minor to one of my teachers. I came to the lesson and found my teacher prostrate upon his sofa. He "was worn out," he said. He had just heard the same concerto from a second year American student! We never dictate to our foreign teachers. I wished so much to tell my teacher how our American teacher would have given that girl a little parlor piece and have made her happy. And then she would very likely have grown to better things gradually, and some day the Bach would have been all right. Criticise my teacher! Never. I had too much respect for his standard. I only say he did not *know* Americans. The girl became discouraged and went into Kindergarten work.

"Where would you begin Kreutzer with a pupil?" asked a timid young teacher of Professor Jacobsen, of the Royal High School. Now Professor Jacobsen is a splendid teacher of the Joachim bowing. Bowing is his hobby just as interpretation is the hobby of Professor Kruse, and technique the hobby of the conscientious but dry Markees.

"Well," replied Professor Jacobsen gravely, "I never taught beginners, but I should say one might begin Kreutzer in the second year of study." Think of it, and I am playing Kreutzer yet and so are you, if you are a violinist, and so does Joachim on a summer vacation. Berlin violin teachers dislike to experiment with new compositions.

"Please listen to this Concerto by Saint Saëns," an American girl said to a certain Hochschule teacher. He frowned but he heard the concerto and he liked it so well (he had never heard it before) that he taught it to several other pupils that year.

I went to Berlin one summer to work up a winter's repertoire and to get some teaching hints. I never secured any teaching hints there. My teachers had never taught beginners, and when I asked my teacher what he would do in certain cases with a third or fourth year student, he either evaded or declared roundly that he did not know. All the practical hints I ever received in teaching I have secured from *American teachers of long experience who know American needs.*

Inspiration and a great deal of it I have gotten abroad, but I do not see that I learned there how to teach.

I should say, unhesitatingly, that if one wishes to go to Berlin, one ought to spend three or four years and more, if possible, in preparation with a representative of the Joachim school in America. It saves time and expense. It saves tears, too!

The lady representatives of the Berlin school are Geraldine Morgan, New York; Maud Powell, Lillian Shattuck, Boston, and Carolyn Belcher, Boston. I do not mention Leonora Jackson, first, because she has abandoned the Joachim system of bowing and secondly, because she does not teach.

The male teachers of the Joachim method in America are Listemann, Chicago; Schmidt, Philadelphia; Schnitzler, Boston; Spiering, Chicago. There are some younger members of the school located in Cleveland, Detroit, and other cities.

You may ask why I have not mentioned the English school of violin playing. There is no English school. London has Sauret, Wilhelmj, Naehez, Kruse and other noted teachers. They represent various European schools. England is as devoid of an special school of violin as of composition. As for America, we import over symphony orchestra men. We import our opera singers and many of our teachers. Very few of the imported ones are generous enough to put the American flag on their European houses as does Schumann-Heincke on the house bought with American money.

I will briefly state the important features of the Joachim method. The fingers of the right hand are placed upon the bow lightly, exactly at right angles to the bow stick. The forefinger is never permitted to lie down on the bow. The thumb is slightly bent and lies between the second and third fingers. When at the point of the bow, the wrist is not depressed as in older systems.

The Joachim system does not recommend a series of undulating movements of the wrist, except in spiccato bowing. The stroke of the wrist is lateral rather than above and under the stick. This insures a strong muscular action of the arm in forte passages, the power of which must, if necessity, be lessened by a depressed wrist. The violin bow is placed about an inch from the bridge, exactly parallel with the bridge.

On an up-stroke the wrist is elevated slightly and the elbow is suddenly bent. This brings about a perfectly normal stroke of the bow and exactly parallel with the bridge.

A perfectly free wrist stroke at the heel of the bow is demanded.

I shall say nothing of the left hand, except that the Joachim followers insist upon a trained and ready hand in this position:

The thumb is well advanced, and in the third position clings a little closely to the body of the violin.

Carl Courcoirsier has written an excellent work on the Joachim bowing, which has been translated by Mr. Krehbiel.

"A STRING TRIO."

The Violin's Version.

I am a genuine Stradivarius, rich in color, perfect in outline, magnificent in tone. Needless to say I am beautiful, with a beauty that pities, while it shudders at the millions of spurious imitations that flood the market, forging my name, usurping my place, and generally making themselves obnoxious to a delicate organization like my own!

I belonged far back in the latter years of the seventeenth century to an Italian Count, who presented me to a master in the art of coaxing sweet sounds from out my very soul. I could feel the exquisite thrill which passed from his great mind to mine—what a wealth of tenderness and feeling there was in his broad sympathetic heart, which oozed out from his finger tips, into the strings, and what a dexterity there was in the white nervous hand, which wielded the bow that swept them.

But money, the love of which, and the spending of which, is the root of all evil, was the cause of my first heart-broken farewell to the master I had grown to love and answer. He was poor, I was worth many hundreds of pounds—so I opened my eyes after that last night in Italy, my beloved birthplace, in the shop of a London dealer, while a check for a large amount found its way into the empty pocket of my former owner. Perhaps it went far to solace him for the loss of me—who knows? Verily human beings are strange and inexplicable enigmas to us little creatures of wood and gut.

A big, burly, hearty man became my next owner, a retired colonel, who told the dealer that he required a genuine article for his daughter, who was mad on such things as fiddles. I was produced, and at once pronounced the very instrument for the young lady in question, and after that I left the shop under the big gentleman's arm. When I arrived at my destination and beheld my future mistress, a tall, slim, sweet-looking girl, with fair hair, and big brown solemn eyes, I straightway fell in love with her. She threw her arms around her father's neck and hugged him, whilst she sobbed and laughed alternately from sheer joy at her new possession. She was a splendid performer on the violin—my young mistress—in spite of her eighteen summers; but I could tell as she laid the bow across the quivering strings, and caressed me tenderly, that the greatest thing in the world had not yet come to her. She played with faultless execution and admirable expression; her tone was pure and penetrating

but it lacked the peculiar thrill that love alone imparts. It was pleading but not passionate; it was calm and melodious, not heart-stirring and enthralling.

One day, as it was bound to do, that mysterious something came into her young life—in the shape of a tall, thin young man, with fiery dark eyes, and thick curly hair, who played the 'cello divinely, and suggested trios to my young owner.

"Trios?" she echoed, looking at him with her pretty brown eyes. "Oh! that would be delightful."

"Then we will begin them as soon as I can find a viola," he answered, pressing her hand at parting, a little more than was his wont. "And I think Miss Bertram will be good enough to join us; she plays uncommonly well——"

"Miss Bertram!" It seemed as if this afternoon Hilda Musgrave could do nothing but repeat Clive Holland's words.

"Yes, she lives just down in Euphemia Road—that pretty, dark girl, you know——"

He smiled comprehensively, she looked at him a little strangely, and the next moment he was gone.

Hilda turned to the glass over the mantelpiece. She had been practicing when he was announced, and she had just laid me down in my plush bed withouts shutting the lid, so I had seen and heard everything, to my entire satisfaction. My young mistress was very pretty, too, but I could tell from her manner that she was jealous—the first seeds of jealousy had been sown in her heart by Holland's outspoken admiration of another girl. We violins get jealous of one another sometimes—not that I was ever jealous of any other violin made, save and excepting perhaps, the "Messie!" but our jealousy does not lead us to the extent that human natures do, when they suffer from the torments of the green monster!

The viola came in course of time, under the wing of a pretty girl, with fair fuzzy hair and bright blue eyes; and then our trios began in deadly earnest. The 'cello looked at me several times, to see if I was taking in all the little play—and I was. My young mistress's tone grew deeper and more passionate, and I am sure I did my best to convey her feelings to the owner of my bass companion. The viola, too, looked sometimes as though it was half ashamed of the part it was forced to play in the little tragedy. Its mistress played well and knew it—she also made up her mind that the owner of the 'cello should know it too, and admire her for it. And Holland's dark eyes sought those lighter ones of Miss Bertram many a time and oft, even when Hilda's dark brown solemn orbs were upon them both, half pityingly, half jealously.

Holland came in one day, when my mistress was practicing, as he often did.

"I am going away to Italy, rejoice with me!" he said, as he shook hands.

I, from my coign of vantage under Hilda's arm, felt her shiver a bit.

"Yes?" she merely said interrogatively.

"It will be glorious. I have always wanted to go there!" he answered. "I may see the birthplace of your favorite."

I am not endued with the power of speech on my own account, so that I could not express myself as I should have liked to at this announcement.

"Mrs. Bertram has been kind enough to say that she will let me join her party—why won't your father let you come too, Miss Musgrave? I am sure Mrs. Bertram would be only too delighted——"

Colonel Musgrave came in at this juncture, and the proposition was duly put before him.

"I should like you to join the party, by all means, if they will have you," he said, pinching his daughter's ear affectionately. And Clive Holland said that they would be delighted. So it was all settled ultimately, and I set forth on my travels towards my native country with a light heart, in company with the 'cello, and the viola.

And before we had gone very far together, I could see that the pretty Miss Bertram had completely won Clive Holland's vacillating heart. And it became apparent to my young mistress, too. So, for once, I refused to be amenable, when we next played trios, and Holland grew quite angry with me, and said that trios were no good—duets were more to the point. I thought he was about right, and Hilda took me out of the hotel drawing-room, where we had been playing, in Venice, and leant against the balcony with me under her arm. She said nothing—what was there to say? Clive had never told her in so many words that he loved her, so that by rights she was not even entitled to grieve. If the viola had never joined us, well—even I, inanimate wood, as I am supposed to be, even I, think that there would have been another ending to Miss Musgrave's love story—but, as it was, the 'cello and the viola had joined hands—and what could a Stradivarius violin do under the circumstances but wish them good luck, and try harder than ever to please my young mistress? Which I did, and while we were at Venice a curious thing happened.

Hilda Musgrave was asked to play the violin at a small charity concert, at which there was to be a trio played by some musicians in the town. She was asked to play the violin part as well as a solo, and complied, not really caring very much what she did just at the present time.

I had barely uttered my first plaintive, tender note, before a man in the audience started up, and I recognized my former owner with joy.

He came round to the green room when my solo was finished, and I found out that he was to play viola in the trio. He told a little of his story to Hilda Musgrave as she stood there waiting for her next turn, with me clasped lovingly under her arm, and she allowed him to draw the bow across my strings again. But I had got used to my mistress's caressing touch now, and I did not respond as I used to do to Signor Buoni's hands. He looked at the girl.

"What have you done, signorina?" he asked, smiling. "I cannot play this instrument now!"

Hilda laughed a trifle nervously.

"I am not a good performer," she said. "And I really have done nothing."

"It must be my play which has fallen off then!" he returned pleasantly "This violin was the most perfect I ever had, signorina!"

"It will always be dear to me!" answered my young mistress, taking it from the maestro's hand, and pressing her cheek against me lovingly.

"Until—someone comes—signorina!" muttered Buoni quite respectfully.

Hilda Musgrave looked at him for a moment quite steadily with her solemn brown eyes. Then she turned away.

"Ah!" added the signor gently, "he has come and gone, that is the secret of your playing, signorina. The day you marry, you will lose the power of enthralling your audience as you have done to-night."

"Is that true?" she asked. And the brown eyes, as they turned towards the old Italian, were full of tears.

"That is true," he answered solemnly. "I have proved it over and over again in my pupils—in my friends. It is the sad and sorrowful in music which appeals to the human breast—not the joyous, light-hearted, completely self-satisfied soul——"

I listened, and I knew that he was right. Hilda Musgrave, had she been absolutely happy in her love, would never have played on me as she had done lately.

It is we violins that know—as we pass from hand to hand through countless generations down the long ages! Supreme happiness and contentment never made a sympathetic player; it gives a different tone to everything they say, even on an instrument. It is the sorrowful ones of earth, who hold the key to the hearts of their audience —*Violin Times.*

STACCATO-BOWING.

It is not generally known that Wieniawski, perhaps the ablest and most brilliant exponent of *staccato*-playing, at one time in his career, despaired of acquiring this peculiar and, to most violinists, difficult stroke.

The discovery which Wieniawski made was as follows: He found that so long as he confined his efforts to a wrist-stroke, he was unable to advance his *staccato* beyond mediocrity; but with a wholly inactive wrist, and an exceedingly rigid arm, he was at once enabled to play a clear, crisp *staccato* with remarkable velocity.

When the first delights of acquisition had begun to subside, Wieniawski applied himself vigorously to the regulation of speed; for it was only too palpable that the extraordinary speed attained by means of a rigid arm would, if not properly controlled, prove a quite useless accomplishment. After much zeal and tireless energy, he found himself master of a *staccato* whose exquisite quality and brilliancy captivated all the violinists of his day.

This anecdote should serve to encourage all students who are struggling with the peculiar difficulties of the *staccato*-stroke. But it is well to add that Wieniawski's experience should not mi lead them into the adoption of such measures as he employed; for what proved a brilliant success in his case might, in similar attempts, prove a dismal failure. Indeed, the very rigidity of arm which enabled him to achieve exceptional results might prove disastrous in the experiments of other, and lesser, violinists. Wieniawski's experience with *staccato* proves beyond a doubt, however, that no fixed rules are applicable for the acquirement of this fascinating bowing. All violinists acquire it in a peculiarly *individual* manner; and their experiments are greatly influenced by physical conditions and by the general training which the right arm has undergone. Joachim, one of the most admirable bowists among all violinists of the present century, is strangely deficient in *staccato* work. The simplest and briefest *staccato* passages present to him difficulties which he surmounts with anything but elegance, yet he has said that in days gone by (and more especially in his early youth), he executed long and rapid *staccato* figures with consummate ease. Inconsistent as such a statement may seem at first blush, it may not be difficult to account for his present inability to perform that which once he had thoroughly mastered. In the early years of his manhood, Joachim abandoned all compositions savouring of virtuosity, and devoted himself almost exclusively to the most serious musical creations. The transition eventually resulted in great musical and intellectual strides; but there can be little doubt that, from a purely instrumental point of view, some accomplishments were sacrificed in the abandonment of compositions containing the elements of a violinist's needs. In other words, compositions written by violinists further instrumental progress, whereas those that are written by the purely creative artist rarely take into consideration the peculiar features of violin technic (as, for instance, Bach's compositions), and are hardly calculated to encourage true instrumental growth.

ADVICE TO PIANISTS.

CARLOS SOBRINO.

Musical memory is a gift, but in all cases can be improved also by practice. The student should try to memorize, from the beginning, all his exercises, etudes and pieces; but this should never be attempted before they are perfectly mastered by notes. The student possessing the knowledge of the meaning, form, structure, etc., of a work will find it much easier to memorize it. It is much harder to commit to memory a poem written in a language totally strange, than one written in our own. No student can have very high aims without the cultivation and study of theory, harmony, form and composition. Theory, elementary harmony and form are a necessity even for amateurs. To play well a work one must understand it thoroughly. Once, when I was quite young, I brought to Rubinstein, for criticism, his own concerto in E minor, after having worked very faithfully in it; I had not quite finished one page when he suddenly stopped me to tell me, in his proverbial kindness of manner, "My boy, in attempting to study a concerto well, you must commence by the orchestral score and not by the solo part."

///

Piano students should give more attention to the art of singing on the piano and the art of pedaling. Both are generally very much neglected and they require the earliest and closest attention. Dr. Hans von Bülow was of the opinion that all pianists should study singing. I don't know if that is necessary, but what will be found very useful in trying to phrase and play a melodic passage well on the piano, is to sing it beforehand (as the voice will obey your musical instinct much sooner than your fingers) and then try to imitate it on the piano. The study of the pedals requires very carefully teaching and special practice, since they are such great factors in the art of pianoforte playing. Pedal marks are very often wrong, even in the very best editions. The use of the pedals may change according to the qualities of the piano being used. The practice of rapid substitution of finger for pedal, and *vice versa*, in sustained tones, will prove very useful.

///

The art of interpreting should also be cultivated. The average student that comes out of a school or conservatoire with certificates and honors, is often found to be unable (by himself) to make anything out a composition he has never seen or heard before, on account of the much-abused help, in this respect, received during his studies from his teacher, and the *revised* and *re-revised* editions crowded with all sorts of notations and indications and explanations and metronome marks, expression, pedaling, fingering, etc. Many of the modern, so-called good editions, may be of help to students that have no talent, but they are certainly a drawback (often misleading) to talented ones. Rubinstein often requested his pupils to use (specially in Mozart and Chopin) the most simple and primitive editions they could find.

The Voice

MR. FRANK HERBERT TUBBS, Associate Editor.

With this issue we continue the series of answers to inquiries. We have been running articles of a pedagogic nature from which material for study has been derived. Now we purpose giving a very practical trend to this department by answering questions sent us by teachers and students. This instalment shows the helpful character of this department. We will welcome inquiries from all who desire help.—Editor of THE MUSICIAN.

INQUIRER'S DEPARTMENT.

FRANK H. TUBBS.

What merit has the much-talked-of new vocal method over the old?

It is not a settled point that there is any new method of voice culture. Many teachers are telling about their discoveries, but so far as can be discovered, "there is nothing new under the sun." This journal has been foremost in its desire to present new ideas and to obtain for its readers the latest and always the best in voice culture, which can be put into print. It has solicited from those who think they have something new and complete descriptions of their discoveries. Thus far not one has been able or ready to show much. The so-called discoveries have been such only to the individuals and are things which have long since been known and used. To re-discover is something and we are all thankful for that. Concentration by a teacher on a good principle until he thinks he has made a discovery is a very good thing and the application of that concentration makes the man a better teacher.

The advance in voice culture comes in directness of application on better known psychological lines. The intense activity in all circles has made brighter and more quickly acting men and women. Business was never so broad, active and keen as it is now. The whole American people is aroused to quicker thinking and quicker acting. It permits the use of the science underlying education and art to be understood and adopted in shorter time than was formerly needed. The influence of the intelligent direction is, therefore, greater. A teacher who has learned to use these active agencies may have the right to claim discoveries, for there is a chance for discovery in this greater efficiency of the race. But it is not a new vocal method. It is advanced education and art, while the science remains the same.

No more valuable instruction can be devised than that which would come from an exhaus ive study of the "Old Italian Method." An educated man, competent musician and a student would make himself famous and, what is better, become a powerful vocal teacher, if he would devote five years to research and deduction on that method which began with Porpora and which seems to be lost. While we all claim to be its exponents no two agree on its principles. No record has been handed down. How then shall it be studied? I would suggest this: obtain the names of noted singers who have lived during the last two centuries. As the professional life of even the greatest rarely exceeds twenty years, that would cover ten generations and four or five in each generation would suffice for study. Learn what music they sang and study its exactions; learn what training is needed to sing such music; learn what principles govern that training. Take the examples from music of Porpora, Hasse and others, given in Grove's Dictionary, and see how you can sing them. This shows what would be needed. In the same way study the operas which can be had, which were used by the great artists. What they actually did we can do now. This can lead to recovery of the "lost" art, but what research and painstaking practice must follow.

●

Could one hold the breath back too much? Would that make the throat tired?

The desirable thing in voice culture is to restrain the outflow of breath till the smallest amount is used, which will start and continue tone production. One cannot hold back the breath too much, but the *way* of holding it back may be so wrong that throat complications may come. Restraint of breath may approach cessation of breath issue, and if it is so done that no tension is created anywhere, it is all right. The purpose of breath issue is to start the machinery which makes the tone and continue that machinery in perfect operation as long as one wants to sing a phrase. The breath does not make tone. It vibrates the tone-making machinery. Very little breath suffices for this. The singer's chief work consists in removing obstruction to action of the machinery. I can imagine that a locomotive engineer, who was given an engine in disorder, clogged with oil and dust, rusted and battered in its working parts, would need to apply more steam and continue the long "puffs" a greater distance than he would an engine in perfect order. When he gets his train in motion, were it not for friction of air, rail and gravitation, it would go on at the same speed forever. All the steam he needs to use, after getting started, is that which gives power to overcome friction. Hence, the very short "puffs" of the rapidly moving locomotive. If he can have a perfect machine in perfect condition he starts with less "puff" and continues with little power. Our work in training the voice becomes one of getting the machine right and keeping it right.

Attempts to reduce the amount of breath used, especially with those who try to do it at once, result in stiffened muscles and organs. Not only are the muscles of the waist and chest made tense, but those of throat, neck and jaw. A "set" look about the eyes indicates tense machinery. This may all come from misdirected effort to restrain breath and this would certainly make the throat tired. With *right* breath control there can be no tired throat; with misdirected effort there is a chance to have everything wrong. Now, there is the duty of the questioner: to see in what way he is seeking to restrain the breath and remove the tensions, one by one, until he reaches the point when large, generous tone is made, with only a trifle of breath used and the control of that is had without sensation. Then there can be no tired throat.

●

Is there any rule which governs "secondary resonance"?

All of vocal science is governed by rule. One who wishes to go into the science of voice culture must understand the laws of vibration, and they are complicated. Vocal tone is made by vibration of mucous membrane. The first point of vibration in the voice is at the vocal bands. There are other points of vibration in the mucous membrances which line the mouth and nose. When these vibrations perfectly correspond to the vibration at the larynx, we have the perfectly-produced voice in its first stage. But this is not enough for the fully developed voice, because the amount of motion communicated by such vibration to the substance, which transmits tone, is too small to be heard a great distance. In stringed instruments this initial motion of the string is conveyed to a sounding-board. In the piano it is large and in violins it is small, but sufficiently large to amplify the vibration set up in the string. In the 'cello and double-bass viol the resonance chambers and sounding-board are roomy. Hence, the broader tone these can make. With the vocal instrument the whole body becomes a resonator. The vibration begun at the vocal bands and membranes of the mouth is communicated to all parts of the body. The size of the resonators determines the power of the voice. If the larynx and resonators are small we get the soprano voice and, if very large, we get the bass voice, while medium-sized organs produce the medium voice of contralto and tenor.

The laws governing the vibration of strings apply to vibrations which produce voice, but these are beyond the direct control of the singer. The less he attempts to direct them the better for him. According to Tyndall, they are: "The rate of vibrations is inversely proportional to the length; it is inversely proportional to the diameter; it is directly proportional to the square root of the stretching weight or tension; and it is inversely proportional to the square root of the density of the string."

The amplification of resonance is more directly under the control of the singer. The whole body must be made capable of receiving vibration. The chambers in which tone can reverberate must be cleared and made roomy and then the opposition to general reverberation must be removed. This is why it is necessary to obtain a limber and pliable body. Rigidity in any part stops vibration and the rigid part ceases to be part of the sounding-board of the voice. The tone must be given free access to every part of the body. In that the mind can control the body. It can will away rigidity and permit extension of vibration. That is all the rule needed for extension of resonance. The whole is contained in this: set the voice into action at the vocal bands and membranes of the nose and mouth and permit it, because of released body, to reverberate the whole human sounding-board—the body.

●

Which is the greatest American song writer? Has any American written a great oratorio?

Comparison of composers and artists is altogether out of place, because there is no standard of measurement. Each has his characteristics which have sufficient worth to attract attention. When we speak of the great composers of the past we cannot say which is the greatest. Even Wagner, who created a school of composition, had so many shortcomings in certain directions that we would not place him ahead of Schubert. And the latter, in some lines, was outranked by Beethoven When we remember the small success (or appreciation) of Beethoven's vocal writing, shall we say he was greater than Handel, whose arias are loved the world over? If then we cannot pick out the greatest composer, because each had his specialty, how shall we select one among Americans and say he is greater. For my part, I admire the chaste beauty and true genius of MacDowell. The next hour I am aroused by the passion of Chadwick, the scholarly settings of Bartlett, the grace of Jessie Gaynor and the dignity of Foote. I turn, too, with so much pleasure to Mrs. Beach, Mr. Buck and to much of the music of DeKoven and Hawley. But each speaks a different message, and each, in his or her way, gives me satisfaction. I must not then pick out one as the greatest.

It is easier to answer the second question. There is a standard in oratorio. To be great a work in this class of music, most fittingly sets forth scenes from sacred writings or clothe scriptural texts, so that their meaning stand out more markedly than it does under any ordinary reading. Measured at this standard, there is no great American oratorio. Dudley Buck's "Light of Asia," J. C. D. Parker's "Redemption Hymn" and John K. Paine's "St. Peter" approach the standard most nearly, but none of these may be given first place

When the public demand for oratorio warrants it there will be works produced. Many small works, suitable for the church, have been written during the last ten years and that because choirs, which can render them, are formed. There must be oratorio societies before there will be many oratorios written. Musicians should look ahead and get things ready for the composer. There is talent enough and it is ready to work, but will not work—such is the spirit of the age—without it can be seen that the compositions will be used. It is said that several composers have manuscripts in their desks, written from the writing impulses, which may be published after they have gone.

●

Is special training needed for singing with an orchestra?

The training is that of the head rather than of the voice. The voice should be used in the same way, no matter what kind of accompaniment is used. To be ready and able to sing with orchestra one must be a musician. He must have rhythm very well established and be able to use it aright. He must "hear" harmonies and not merely be familiar with melodies. This all means that he must be more than a singer. Many who aspire to solo work, in light opera, show their incompetency to the director at their first attempt to do solo singing. Some who lay their failures to trickery of rivals, to jealousy and favoritism would, if they were not so blinded find the cause in unmusicianly attempts It is a dangerous thing to attempt what one is not able to do, especially if he knows he is not competent.

What then constitutes the education needed for singing with orchestra? Rhythm is the basis of music, yet few singers have it. All can acquire it, but the majority drift through what they do do in music without it. The sense of rhythm must be fixed. By that is meant that one can make repeated strokes in exact time. If you will take your metronome and set it to slow time (say 46), turn your back to the machine and beat time to its clicks, you will find that, in first attempts, you are seldom in unison with its strokes. Now a trifle ahead and, in attempting to slow down, a trifle behind. In trying to get together you are well mixed up and have to start again. One should practice with some measuring machine till he can agree with it, and many a time he will be so sure he is right and the machine wrong that, if he is good-natured, he will get much sport at the trials. If, day after day, he continues practice he will grow to agree with the machine. If we could measure the length of his steps, when he is walking, he would find them varying in surprising manner. The mood affects the length of step. One can train his walking, as does the soldier, to comparative regularity. He has then secured the sense of rhythm. This is needed by the artist, who sings with orchestra, and if he lacks it he should use some means to secure it. After that—please note that it is "after that"—he should practice singing to his beating time for awhile.

The emotional music to our day leads our singers to take great liberty with written music. In song singing, with accompaniment on the piano, this may be permitted, although it should not be necessary to vary rhythm, even to express the strongest feeling. But it may be done if the singer wishes. When the accompaniment is on the organ the rhythm must be more correctly adhered to, because the organ is less responsive than is the piano, because the player and singer cannot be so closely in sympathy and because music adapted for organ accompaniment has more dignity and regularity. There we find the same "becauses" apply to the orchestra only in more marked degree. The parts which are making the harmony of the accompaniment are widely distributed. To unite the many vibrations (and multiples of any given rate of vibration as comes from the various instruments) requires the greatest regularity and precision. A singer can hardly be too strict in his rhythm when with the orchestra. If there is special training for singing with orchestra it has its base in "sense of rhythm."

●

Do you advise one to train the voice by listening to one's own tone quality and seeking to get an ideal tone?

It is certainly necessary for one to have an ideal, and if one can hear his own voice he may implant upon it that ideal. But tone is very illusive. One can be deceived and not know it, because he never hears his own voice. That which the audience hears is never heard by the singer who makes it. He hears from within and gets his vibration of the ear-drum by the reverberation in the head rather than from the outer ear. After the tone has passed the point which best conveys it to the inner ear, it is varied and shaded in many ways. This addition (or it may be detraction) the singer does not hear in his own voice. Perhaps the reason so many singers are so fond of their own voices, when others don't care for them, is in this cause: their own voices, heard from within, are really fine.

The puzzled student, when his custom of listening to his tone is denied him, may well ask: "How then may I watch myself? Is there no definite way that I may know what I am doing?" There is no better way than to seek to obtain that generous, unstrained freedom of action and vibration, which makes one "feel good all over," when he is singing. The feeling is safer than the hearing, as a guide. This delightful feeling will come on small and delicate voice first. Then, as the amplication of vibration developes, the same satisfactory sensation will accompany the large voice.

WAGNER AND THE ART OF SINGING.

W. J. HENDERSON.

In order to get his works performed Wagner had to take such material as he could get and mold it to his purposes. I have never been able to find in the writings of Wagner any expression of opposition to pure beauty in singing on its own account. He opposed only the customs of the old stage, which sacrificed everything dramatic to the display of the beauty of the voice.

He demanded that the voice be regarded as a means, not an end. That he wrote passages unfavorable to the voice is perfectly true, but it is also true of almost every other opera composer who ever lived. The strain of singing the chief parts in the Wagner dramas is no greater than that of singing those in the Meyerbeer operas. And let me hasten to add that I do not make this assertion on my own authority, but on that of eminent singers and throat specialists. Wagner has proved, over and over again in his works, that he had use for the very best singing that could exist. The Wagnerian cantilena is as musical as that of Verdi or Gounod, and not a whit different in its demands for pure beauty of voice and delivery. In all operatic music there is no passage that yearns for more luscious sensuousness of tone than the duo in the second act of "Tristan und Isolde," and all singers will bear me out in the assertion that, so far as its demands on the voice are concern d, it is no more exacting than the duet between Faust and Marguerite in the garden scene.

But Wagner did demand that the text should be respected, and thereby he opened up a large field of difficulties to the mere singers, who had cared little for the words so long as they made pretty sounds. The school of singing actors, whom he was forced to rear for the presentation of his works, contained few pupils who had been well-grounded in the principles of the art of singing. The result was inevitable. They sang Wagner badly, just as they would have sung any one else badly; and with this aggravation of their failings—that they were forced to push to the front just the weakest part of their style. This was their ignorance of the method of reconciling perfect diction (which their master demanded) with a good voice production.

With one or two exceptions they sang abominably, and there grew up a tradition that this was the way to sing the music of Wagner. Wagner himself did not wish to have it so sung. If he could have found singers who could act, enunciate the text, and reveal to the auditors the full wealth of his melodies, he would have been overjoyed. But, failing to get these, he was glad to have people who could at least indicate the melodies, while they gave themselves up to a complete embodiment of the composer's thought.

It was never my good fortune to talk on this subject with Mme. Patti, but I have had hours upon hours of talk about vocal technics with such singers as Mme. Sembrich, Mme. Melba, Mme. Nordica, Mme. Eames, Campanini, Ffrangcon-Davies, the de Reszkes, Maurel and their kind. Now, it is my firm conviction that these people know their business a great deal better than I know it. Sitting in my seat in the opera house I can tell when they produce the correct result, but they can teach me A, B, C of how to do it. Therefore, I take some pleasure and not a little pride in saying that I have yet to find one whose ideas on the subject are not the same as my own. In the details of method there are many differences among singers. As to the objects to be aimed at there are none. As to the possibilities of singing there is a general accord. As to the great fundamental laws of singing all are agreed. Even M. Ernest Van Dyck, who does not produce the results for which the true method seeks, says that there is only one vocal method, and that this way is the one way for all music.

Singers like the de Reskes and Lehmann and Nordica have solved the problem which poor Wagner found insoluble in his day. They sing Wagner's music beautifully; they enunciate the text; they do justice to the dramatic intentions of the composer. Why? Because they possess the old schooling, the schooling which is the glory of Mme. Sembrich's art when she sings for us Norina and Susanna and Lucia, which is the secret of the liquid flow of Mme. Melba's voice when she carols for the heartless frippery of "Bel raggio."

Wagner demanded of the singing actor simply what the great masters of the old school of Italian singing had taught, but which had been permitted to fall partly into desuetude through the evil influences of the later Neapolitan school of opera composers. Does any one suppose that Porpora taught the art of producing a beautiful tone on only one or two vowel sounds? Does any one believe that he did not teach the enunciation of the consonants? Such a thing is inconceivable to those acquainted with the history of the singers taught by the masters of whom I have selected him as a type.

The principles of singing as understood by these artists are those to which the modern de Reszke and Sembrich and Lehmann and the others proclaim allegiance. They are the principles which govern the singing of Wagner and of Verdi and of Gounod alike. But they are in danger of being thrown into obscurity at the present time by the theories of certain Wagnerian interpreters, of whom the chief in this matter is M. Van Dyck, and the precepts of the narrow-minded and, I must add, ignorant creatures who now control the destinies of Bayreuth. Cosima and Sigfried Wagner are doing more to justify the charge of hostility to good singing in the Wagner camp than the lamented composer did in the whole of his polemics and ill-phrased diatribes against his predecessors.

M. Van Dyck, a man of high intelligence and independence of thought, has devised his own plan of reading the Wagnerian music. It is not unlikely that he is embittered by the success of Jean de Reszke, who sings the roles in a manner radically opposed to that which is taught by M. Van Dyck; and perhaps this feeling carries the utterances of the Belgian tenor a little beyond his beliefs. But at the bottom M. Van Dyck is right. He holds that there should be a distinct difference between the styles of the recitative and the cantilena in the Wagnerian drama. This is undeniable. One has only to examine the scores of the works to see that the Belgian speaks the truth. The recitative is to be sung in a manner as near that of conversation as is consistent with the fundamental difference between song and speech. The illusion of conversation should be achieved in the Wagnerian recitative, and it can be. But when M. Van Dyck tells us, as he does in his practice that the recitative should not be sung at all, but cackled in a dry and tuneless staccato, without due regard to the pitch of the notes which Wagner has written, then we must cease to agree with him. The boundary line between music and the unmusical should not be crossed. M. Jean de Reszke errs in the other direction. He sings legato all the time, and that also is false to the thought of Wagner. And it is this sacrifice of the ruggedness of the true Wagnerian recitative to pure beauty of tone which makes M. de Reszke's Tristan in one or two places and his Siegfried in more than one or two fall below the possible measure of eloquence. But it is far better to sing than to shout Wagner. It is nearer to Wagner's purpose that we should hear the tones as he wrote them, even if they are now and then a little too sweet, than that we should not hear them at all except when a passage comes which the singer interprets as intended to be a bit of cantilena. And then what happens? The tired throat refuses to sustain the tones, and false intonation is the result. Hear M. Van Dyck sing "Nun weisst du, fragende Frau."

This brittle staccato, delivered in a hard, dry voice, without a vestige of forward resonance, with the nasal passages closed, and the muscles of the throat all strained, has no place in vocal art and has no business on the operatic stage. Young singers who are led into the attempt to imitate it will seriously injure their voices. And it is neither beautiful nor eloquent. And it is unnecessary. The Wagnerian recitative can be honestly treated with the resources of the old vocal art, and the dramatic purposes of the composer can be carried out without a sacrifice of voice or method. There is a light, conversational style of recitation in many of the older Italian operas. There is also a tragic and intense declamation in many of them and in some of the oratorios. The best training for the delivery of these is the old Italian school, and that, too, is the best training for the delivery of the recitative of Wagner. There is nothing in the music of Wagner that demands the application of new laws to singing either in recitative or cantilena. The style of the music is new, but so was that of Meyerbeer or that of Verdi at one time. And if you wish to find something which was not only novel but alarming in its day, examine the Weber air, "Ocean, Thou Mighty Monster." It takes a dramatic soprano with a coloratura education to sing that properly.

At Baireuth, the eminent Cosima and her "Wonniges Kind" are teaching that the whole music of Wagner, cantilena and all should be sung in the brittle staccato. These distinguished reformers of the reformer of the musical drama are asking tenors to sing "Am stillen Heerd" and "Morgenlich leuchtend" in "Die Meistersinger" in the same style as M. Van Dyck sings the prattle of Loge. No wonder that the opponents of Wagner say that his works are ruinous to the voice, and that they can not be sung with the old method. There is only one way to sing, so far as the production of the tones is concerned; and that is as the old masters sang and taught. The laws which they laid down, though couched in a poor terminology, were the fundamental laws of song. The same laws

are to be observed to-day. The same laws are observed by the best singers. We cannot improve on the method of such a singer as Marcella Sembrich. Whenever she appears on the stage she preaches an eloquent sermon on the art of singing.—*The Times.*

GLEANINGS.

False Doctrine.

Hundreds of books have been written on voice production, and miles of articles and letters in the magazines, and yet there does not appear to be one precept or practice that is universally accepted. Many teachers lay stress upon the value of a knowledge of the anatomy and physiology of the vocal organs, and they fill their books and waste their pupils' time with dry technicalities that are worse than useless for the purpose in hand. This is a great mistake. Whoever learned to speak by studying anatomy? Who thinks it essential to know all about the bones and muscles of the hand, or the structure of the eye, before he learns to write or to paint? The power of hearing is absolutely necessary to the musician, for this alone directs his efforts and ministers to his pleasure whether in singing or playing; but the faculty is enjoyed in its fullest perfection without the slightest knowledge of the marvellous mechanism of the internal ear. The truth is that the best singers the world has ever known knew nothing, and cared nothing, about vocal anatomy; and nobody ever did, or ever will, sing the better for such knowledge, however interesting the study may be, or however useful in other directions. The great singers of the past knew by the test of experience how to use their vocal organs, and this is all that is essential—a very different thing, as we have seen, from knowing their structure and mode of working.

A Better Way.

How does a child learn to speak, but by listening and imitating? Born deaf, it remains dumb. How does it learn to write, but by looking and copying? True, the child must first be taught to hold his pen; but this being done he no longer thinks of himself, but looks outwardly to imitate the graceful forms of the copy before him. And so the painter looks away from himself and thinks only of the forms and colors to be depicted on the canvas—forms and colors of real objects or of ideals that have grown out of them. In like manner singing is largely an imitative art, and the voices of people are mostly self-made, good or bad, not according to their knowledge and thought of the machinery, but according to the patterns they have consciously or unconsciously followed, or to the ideals they have set before themselves.

These views—the uselessness of laryngeal physiology and the value of example and imitation—are confirmed by everyone's experience that the instrument of voice, the larynx, works automatically, so that to sing a note we have only to listen to it, or think it and will it, and the self-adjusting machinery of the larynx, set in motion by the breath from the lungs, instantly calls the sound into being. And this is true, not only of the pitch of a note, with which the larynx is primarily concerned, but largely also of its quality, due chiefly to the action of the mouth. See how easily, without thinking of the means, children imitate the tone as well as the tune of the street cries; and notice the extent to which good or bad tone in speech or song runs in families and in districts. All this shows that people's so-called natural voices, both in singing and in speaking, are partly the result of environment, and partly voluntary, as well as partly constitutional. How important then that, from earliest infancy, at home and at school, children should hear the sweetest of music and the purest of speech. It is for want of this that so much of the business of a voice trainer, and the hardest part of it is the correction of bad habits. Let it not be forgotten that the best of all is to show a good pattern and so implant and foster in the mind and heart true ideals of beauty; for it is the mind that governs the voice and the heart that is the source of all true expression.

The Larynx.

The real instrument of voice is the larynx. It is situated at the top of the windpipe and causes the projection, known as "Adam's Apple." All voice, whether called "chest" voice or "head" voice or any other, originates in the larynx by means of two elastic bands, stretched across it from back to front, and termed the vocal cords. In ordinary breathing these are wide apart; in speaking and in singing they are brought so close as nearly to touch, leaving but a narrow opening, termed the glottis. Impelling the breath through the glottis produces a rapid vibration of the vocal cords, which cuts up the stream of air into a correspondingly rapidly number of little puffs, resulting in sounds which vary in pitch according to the varying thickness, length and tension of the vocal cords produced by the action of the different muscles.

Lung Exercise.

Singers should have daily drill in lung expansion and breath control, always avoiding excess, and there is excess when there is fatigue. The lungs can be expanded upwards, downwards, sidewards, backwards and forwards, at will; and, by so directing the attention, each part of the lungs can be filled and drilled while the others remain almost at rest. Occasionally to fill the lungs to their fullest capacity (always with pure air), now emptying them suddenly, and now as slowly and equally as possible, with or without tone, is splendid exercise for both voice and health. Long-sustained notes and chords form excellent choir practice. At first they should be sung *piano*, perfectly equal from beginning to end, and without the least jerk or trembling. The management of the breath, especially in its slow and steady emisssion, is of supreme importance and claims constant attention.

Health.

Voice and vocal ability entirely depend upon health of body and mind. Whatever injures bodily health or peace of mind injures the voice. Singers should get all the fresh air they can and a moderate amount of physical exercise. They should be temperate in all things, and should abstain from shouting, from coarse laughter, from loud or long-continued talking, from late hours, from wearying toil or pleasure, from violent emotions, from excessive eating or smoking, and from all alcoholic spirits. They should cultivate a love of nature and of children, a feeling of benevolence, a cheerful disposition, and a real sympathy with the joys and sorrows of those around them. There can be no good or acceptable music where there is unhappiness or ill-feeling; but the joy of heart which springs from the spirit of unselfishness and the exercise of the benevolent affections will show itself even in the tone of the voice. This subtle but powerful means of expression and voice cultivation should not be overlooked. How largely the training of the voice is the training of the mind and heart!

THOUGHTS ON VOICE TRAINING.

D. A. CLIPPINGER.

This tendency to theorize is valuable in that it keeps us thinking, and we finally get a measure of truth; but, on the other hand, there is a tendency to reach conclusions too quickly, conclusions which a later knowledge of facts does not confirm; hence, there is a constant readjustment.

Voice culture and singing has come in for its share, but the greater part of the theorizing on this subject has been of such a character as to be of no benefit to the singer. It has been along the line of the mechanics of the voice and not the art of singing.

The critics would have us believe that the art of singing is practically lost; that the singers of to-day do not compare with those of the time of Porpora. If that be true, it is because we have been trying to discover how they did it by studying the mechanism of the organ and forgetting the tone quality, for which these singers were noted. The geologist might as reasonably expect that by becoming thoroughly familiar with the structure of the earth he could create another like it. It is not absolutely essential that, in order to produce a beautiful tone, one should know every scientific process or the names of all the muscles involved. Go into the laboratory of a great specialist and you will find it stocked with complicated machinery, all used in trying to find out how it is done. This is all right for the specialist, but from the standpoint of the teacher its value is extremely doubtful.

Read the journals and you will see that we are working from diametrically opposite points in our attempts to get at the truth of voice culture. We have organized schools which believe that the art of singing coming through muscular development alone, and every muscle, extrinsic and intrinsic, long and short, great and small, is developed until we become actively conscious of it. Power seems to be the chief aim. As athletics or physical culture this should be a success. But is the quality of the tone improving under this treatment? There is a certain animal of biblical notoriety, having abnormally developed aural appendages and immense volume of tone, but which have never earned the title of sweet singer; in fact, has never been accused of having even "a musical ear." Power is not the first consideration in singing. It is the last.

At the other extreme we carry it into the realm of metaphysics, and the teaching seems to be done by mental suggestion, a kind of suggestive psychology. Everything is carried on somewhere in the realm of the ideal. There is much truth in this, and I consider it infinitely better than studying mechanical processes alone; but sometimes in dealing with the mental processes of singing it is necessary to remember that we are still conscious of a body.

Everything exists first as thought, and what we call creation is giving the thought a material form or manifestation; or, as Hegel put it, "Form is the realization in matter of an idea." In learning to sing the tone must be created, mentally, first. That is, it must be in the mind of the pupil, so he may at all times hear it. He must be able to recall a tone quality as he recalls a word. It is the business of the teacher, first of all, to assist the pupil in forming this perfect mental conception of a musical tone, and suggestions as to the physical processes should be secondary.

When the pupil has the pure tone established in mind he has a standard by which to compare every tone he sings and can then begin to practice alone. Until he has it, practice away from his teacher is worse than useless. Pupils often think it a waste of time to take lessons and not practice. Such a pupil needs to be taught to respect the honesty of his teacher, and that his teacher is taking the course that will advance him the most rapidly. It can be relied upon that the teacher is anxious for the advancement of the pupil as the pupil is himself. On the other hand, young teachers feel that their success depends on getting the greatest amount of practice out of their pupils. Don't make such a mistake. In learning to sing it is the way you practice, and not the length of time. The way for most beginners to practice is to do a lot of hard thinking and very little singing until they establish some ideals. It is easy to sing if you have something to sing. It is easy to give if you have something to give. It is the attempt to give that which you do not possess that results in failure. The successful singer must be rich in his conception of the beautiful, rich in the development of his imagination. He must be a thinker. Thoughts are his capital stock.—*Choir Leader.*

SELECTION OF SONGS.

KARLETON HACKETT.

Here we have the perennial source of trouble for the teacher. From the earliest lessons to the finished concert artist this question must be the subject of the teacher's most earnest thought, and a many sided question it is demanding for its solution not only a wide acquaintance with music literature, but a keen insight into human nature as well. However, there are certain principles of "applied common sense" that always serve for guides, the music must be good in itself, and suited to the capacity of the student.

The capacity of the student is the difficult quality to gauge and requires experience and much judgment, and in selecting the music the temperamental characteristics of the pupils are of quite as much importance as the technical proficiency. Pupils easily misjudge their own powers and desire to sing many things for which, at the time, they are entirely unfitted, and the skill of the teacher consists in the ability to interest a pupil in the sort of music that it is beneficial for him to study. The pupil has not had the experience, cannot look at things in the same dispassionate way, and so it is the teacher's duty to see to it that the proper music is chosen; but it must be done not in an arbitrary, dogmatic manner, which is always irritating and tends to injure the relation of friendly sympathy in which the two should stand.

As in every other department of music, if the pupil is struggling with works evidently beyond his grasp, the fault may be traced back in almost every case to poor teaching. For instance, in singing, if the pupil has had a thorough grounding in the basic principles of the art, in pure tone and ease of production, it is easy to convince even the most headstrong that the particular piece he may have set his heart on is beyond his present abilities. If it cannot be done in any other way, let him sing it and demand from him the same

finish of execution and breadth of conception that it requires, and in a short time he is quite willing to give up the unequal contest and return to something within his power. On the other hand, forbid him to touch it, and the chances are that he goes home and to assert his freedom as a man goes to work at this particular thing and screams himself hoarse out of mere spite.

We hear a great deal of the trouble teachers have with pupils who will sing some particular song simply because their dearest friend is singing it, but except in the case of some hopelessly unmusical pupils who cannot tell good singing from bad, this sort of pit fall the capable teacher can avoid. If by reason of superior voice and longer training the one girl can sing the song well and the other as yet cannot, this fact can be brought out in a way not to offend nor discourage her, but rather to increase her artistic perception and stimulate her ambition.

If again, the one girl is singing something beyond her and consequently singing it very badly, it is still easier to show the other how foolish it is, how much time she is wasting, to say nothing of the injury she may be doing to her future. It only needs a little knowledge of human nature, a little kindly tact, and a bit of firmness, because the average pupil, though not very well informed and without much practical experience, is at bottom intelligent and desires to learn.

However blind we may be to our own shortcoming, we are usually pretty keenly alive to the failings of others, and this human quality runs right through all the ranks of our pupils and can be turned to excellent account in this very point of selecting music. Nothing is more common than the severe criticism that one pupil passes on another who is singing too difficult music, and they say, "did you ever hear anything like it," and "isn't it perfectly awful for her to attempt such things." Then if this particular individual also, has a weakness along the same line and surreptitiously works at some forbidden things, it furnishes her food for pretty serious thought if she is asked what she supposes her hearers say about some of her efforts.

Passing from these questions, which must be left to the discussion of each teacher, to our proper subject, what music shall be selected and how is its availability to be determined. First of all, it should always be good music. No matter how simple it may be it must be well constructed, melodious and rhythmical. There is plenty of such music, from that suited to the youngest students to that for concert artists, music both pleasing to the pupil and insensibility forming his taste. It is a mistake to select music beyond the intellectual grasp of the pupil and by telling him that it is fine, try to force him to study and like it, for according to his natural inclination, either he forms a distaste for much of the best, or becomes that most disagreeable of music students, the canting pretender, who is forever ostentatiously admiring what he can neither enjoy nor appreciate. Give us rather the honestly expressed dislike of one for what he does comprehend than this hypocrisy. A healthy musical taste is formed like a solid technique by beginning with what is simple and within the intellectual grasp of the pupil, and as the mind developes passing by easy gradations to the complex. Let each musician seriously ask himself what were the things that he most admired in his youngest student days and he will surely realize that his pupils are but reproducing his own process of growth, and truly his time would have been but ill spent if in the prime of his powers he had not progressed and outgrown much that seemed to him in early years as the greatest music.

The music should not only be simple and good, but for the American student speaking only English, it should be in his native tongue. For a long time the voice training in this country was almost entirely in the hands of the Italians, and nothing was more natural than that they should prefer to use their own music which they understood and loved, and so there grew up a feeling that there was some esoteric virtue in the mere use of Italian, that the use of that tongue was in some way helpful to the voice. Nothing could be more untrue. It is possible to sing as badly in Italian as in any other language; the tones may be as harsh, shrill, husky and unpleasant in the "language of song" as in our bleakest New England dialect if the voice be not well made. Meanwhile, one of the greatest charms of singing, one of the greatest difficulties to be mastered in acquiring perfect vocal technique, is lost sight of, a clear and pure enunciation. It is impossible to enunciate distinctly, to pronounce properly, a tongue which we do not understand, and some of the Italian we hear sung would be laughable were it not so sad to think of the time wasted on a foreign language when the same energy would have gone far towards mastering the knotty points if it had only been applied where the mind could work in intelligent co-operation. When any pupil has a good technique, when he produces good tones, has an even scale, and can sing his mother tongue correctly and so that it can be understood, then if he has acquired some knowledge of French, German, or Italian, let him sing them, but not before.

English is the language of our player, and if the great masterpieces of song have been composed to another idiom, there is already a vast amount of beautiful music the words of which we can all understand, if they are well sung, and that are vital to the growth of music in this country.

Then the question seems more clear—music that is not too difficult, but always rhythmical and melodious and in our own tongue. To sing a simple song well takes the skill of the greatest artist. It surely cannot be too easy to give employment to the mind of the young student, but it must always be as a stepping stone to something farther on. The song may be as nothing, yet by the art of a great singer may become a masterpiece. How comes this? By sympathy with the music and the sentiment, by that beauty of voice and command of technical resources that makes each tone a delight, by that purity of diction that makes each word sink into and amplify the power of the music. Can the young pupil do this? Can it be acquired? Is it worth working for?

The simple song from which the pupil turned with disappointment and hurt pride becomes, when properly illustrated, a mine of inexhaustible possibilities. The music pupil is quick to see, ambitious to perform. If there be weak places in a voice the sustained melody of a simple song surely reveals them, while the intensity of a more impassioned dramatic song may cover many a vocal quicksand. This defeats the purpose, for the songs for a young singer should ever be making manifest his weak places and stimulating him to render them strong, that he may eventually have a firm, vigorous, yet plastic voice, that shall respond to the conceptions of his mind; not develop temperament at the expense of voice, and have eventually keen artistic perception and nothing with which to ing.

When a pupil can sing a simple English song with such beauty of tone and feeling for the text that everyone delights to listen, then something has been done, a foundation has been laid on which a real art work may be raised. The duty of the studio and the teacher is to give this to each pupil, and the medium through which it is given is by the artistic interpretation of the simple English song.

Music resembles poetry; in each
Are nameless graces which no methods teach,
And which a master-hand alone can reach.

MME. SEMBRICH ON SINGING MOZART.

The pleasure of singing Mozart must be its only reward. There is no public in the world to which it appeal as effectively as the brilliant bravura. So the singer devoted to the art must be true to ideals when Mozart's music is to be sung, whether or not the public is to be interested as much as it would be in other styles. Yet it is the most difficult music in the world to sing. There are phrases in "Deh viene" that are more difficult than anything in the whole range of vocal music. But the public would rather hear me sing "Ah, Non Giunge." I should rather sing Mozart always, but the public is not always interested. At the last Sunday concert I gave as a final encore Mozart's "Das Veilchen," which is one of the most beautiful songs ever written. It quieted the audience, however. I appreciate as well as anybody the thinness and conventionality of the orchestration in the old Italian opera. Sometimes when I hear that in my dressing room I cannot help smiling. But nothing else is so suited to the voice as that music, and the decline in popularity accounts for the small number of good singers to-day. None of them will learn coloratura singing because they feel that there will never be any opportunity for them to make use of it on the stage. It is not alone in this country that legato singing makes less impression with the public than any other kind. The same thing is true of Germany. In Russia it is appreciated more highly than in any other country. Persons have asked me at times why I did not add some ornamentation to please the public and the applause that would come from such different singing. But I would never consent to do that. Once in Paris just after I had made my début I heard Miolan-Carvalho sing the Countess in "Le Nozze di Figaro." The way she treated the music was really scandalous. She put in cadenzas, high notes in place of low ones, held on the notes that suited her voice best. After I had heard that I told myself that whenever I sang Mozart it would be as the composer had written the music, and in no other way. I have never forgotten that performance of Miolan-Carvalho, and if I had ever thought of singing Mozart otherwise than as the music is written, I would have lost that idea after hearing her.

THE MAKING OF A GREAT SINGER.

It has been said that a great singer is born, not made. But this, like a great many other nice sayings, is only a part truth. No singer has ever achieved greatness on just what was born in him. Nor, of course, is it true that one can work out his greatness by sheer force of will and application without the natural gifts that must form the basis of all great vocal achievements.

No, the great singer is both born and made.

Several things are necessary to make a great vocalist, and these are united in rare degrees in the persons of those who achieve great fame along this line. The artistic temperament, the natural power and quality of voice, the strong physique, the intense application, the good sense, the expressive countenance, the comely figure—all these go to make up the artistic inheritance of the great artist in song.

Whether it be the expression of a mood of tenderness or sorrow, or one of joy and gaiety—whether it be the telling of a tale of woe and misery or one of happiness and ecstasy, whether it be the depths of misery or the heights of bliss—whatever be the mood or circumstances, the great singer must have the means of its expression at his command and use them in such a way that he plays on the hearts of his hearers as does the leader of an orchestra through the manifold musical means at his command.

To achieve such results one must first feel; then think, then do. That is to say, all the sensitiveness of an artistic nature must be present in the highest degree; one must work, study, think, practice, learn to apply the means to the end, acquire the necessary technique of reaching people's minds and hearts. Then comes the realization of the ideal, the expression of the emotions and ideas of others, of the great composers. The artist is the crystalization of the best that has preceded him.

A great singer must be at the same time objective and subjective. In the classics he must sing with the expression governed by the intellect and by his historical knowledge—by thought and tradition, if you please. In the romantic school he must allow the romaniticism of his richly endowed nature full sway, and the emotional element becomes more prominent.

Art is mood crystalized into tone or visible form. But more fully is this true of the tonal than of the plastic arts. So the tonal artist must be susceptible to all shades of emotion and, of course, have the technique for all shades of emotional expression. And that is what makes a man or a woman an artist. He or she thinks art, feels art, lives art, does art. What higher attribute can be paid to an artist than to say his life is a continual thinking and doing of art—that he is a personification of art? And yet many of the great singers, those of broader culture and kindlier disposition, deserve even as rich a tribute as this.

In the daily exercise of our profession, we are frequently asked by pupils, "How much time do you think one ought to practice?" to which the most reasonable answer is, "Practice as much as you can." The time that a student should give to practice depends on his own talent, requirements, physical powers and what duties he may have to attend to. But what I consider most important is steadiness and regularity in the work. The time should be well divided and the work systematic. Franz Liszt's advice was, "Do your practicing with the same concentration of mind and devotion with which you should go to Church."

The entirely first-rate musicians and painters are born; like Mercury, their words are music and their touch is gold; sound and color wait on them from their youth and no practice will ever enable other human creatures to do anything like them.

THE ORGAN.

ORGAN AND CHOIR.

WM. HORATIO CLARKE.

Organ Wind Supply.

The wind capacity of an organ is determined by the area and speed of the feeders. The ancient and present method of hand power is by means of a lever handle or handles working up and down, connected with a working-beam lever, to which two feeders are attached, which force the air into a reservoir from which the compressed air is distributed to the various wind-chests. With the up and down stroke, the feeder which is moved by the up stroke is smaller than the other, so that the greater exertion may be given to the down stroke.

In other methods the feeders are operated by the alternate feet upon lever treadles, first stepping upon one and then upon the other, the weight of the body bringing down the treadles, the hands taking hold of a rail above to steady the body. This, perhaps, is one of the least fatiguing methods, and is prevalent with German builders.

They also use a series of treadles or stirrups placed side by side, attached to ropes passing over pulleys above, and connected with large square plungers which fit perpendicular boxes. These plungers have the pressure weights on them, and valves, so that when each in turn is drawn up by standing in the stirrup, only the weights are brought to the top of the boxes, the valves opening, and then closing as soon as the foot is released. In this way each plunger is brought to the top, and the large boxes become reservoirs from which the wind is conveyed to the different parts of the instrument. This wind supply is steady and is ample according to the number and sizes of the plunger feeders.

Some of the very old organs in Germany yet retain the ancient shoe bellows, which consist of from fifteen to twenty V feeders with a shoe at the lifting end. The blowers put the front of the foot into the shoe and lift the free ends of the feeders in their series, taking hold of a rail placed above. As each feeder is lifted, with its weights, it becomes the reservoir of wind supply, and this is the most crude form of blowing.

Sometimes the two feeders of an organ are worked by a vertical handle, the blower working it horizontally back and forth.

Some American builders use a rotary movement with a balance wheel to which a handle is attached. In this case three feeders are used, the motions being divided equally in thirds of each revolution, giving a steadiness in the wind supply without any tremulousness.

During the past forty years, the reciprocating hydraulic motor has been in use where there are municipal waterworks. The motor is attached by rods and levers to the working beam of the feeders, and when the bellows reservoir rises to its full height, there is a simple automatic connection with the water supply valve of the motor which regulates the speed.

Gas and gasolene, and steam engines are also used to operate the feeders, as well as electric motors.

One of the most satisfactory means of wind supply has been found in the adoption of a rotary fan pressure blower, where gas, steam, or an electric motor has been used. The speed is kept constantly at its requirement, even to three thousand revolutions per minute. A wind-gate is automatically operated from the reservoir. When the reservoir is full, the gate closes, but the speed of the engine is kept up, and when the least as well as the largest quantity of air is withdrawn in playing, the gate immediately opens so that the reservoir is always full, and there is no jerking or pulsation in the wind supply.

When the gate is closed, the wind in the blower whirls around with the fan, requiring no greater force in the engine, nor creating any resistance, but on the slightest opening of the gate, the supply rushes forward to the reservoir. In the use of a fan blower of ample capacity, a very large reservoir is not required, its use being chiefly to distribute the pressure and regulate the wind-gate, the speed of the fan being also the feeder and reservoir, a fact which is not a paradox.

In the case of an electric motor, it is attached directly to the shaft of the blower without intervening belts or gearing. The motor and fan may be placed at any practical distance from the organ.

The operation of the fan blower in itself is noiseless, and in case there should any humming tone resulting, its cause may be traced and obviated. A case from personal experience will serve as an illustration. I was holding a position where two hydraulic motors were required to give the wind supply. Each had its own square plunger feeder four feet square operating a foot or more each way, each giving thirty two cubic feet of air every up and down stroke, or sixty-four cubic feet with the two engines, which with thirty strokes per minute, gave 3,940 cubic feet of air per minute for the full organ supply.

As the tax for water for blowing amounted to more than $150.00 per year, I received permission to substitute a four-horse-power Otto gas engine driving a Sturtevant noiseless pressure blower having a capacity of supplying 4,500 cubic feet of air per minute. On the completion of the work there was a humming tone which gave the pitch of middle C all the time the organ was not being played, which ceased the moment the softest stop was used. This humming was very annoying, and I tried various methods for a long time to ascertain the cause. I had the position of the gate changed, new and varied wind trunks put in, and for two or three weeks, each experiment was a failure. I at last determined that the sound must be occasioned by leakage through the pneumatic action, and perhaps at the wind-gate, which I finally placed at the mouth of the fan blower.

In order to test this conclusion, I had an extra small wind conductor made with a gate in it. One end of this tube was inserted one side of the gate and the other end was carried around to the other side, so as to supply the leakage, and thus allow the wind-gate to shut clear down when the organ was not being played. This experiment immediately obviated the humming, which was caused by the air passing across the under edge of the wind-gate, which the leakage caused to open just enough to vibrate the compressed air in the wind trunk, the edge of the wind-gate acting as the irritant. Small holes bored through the gate itself, and bushed with cloth, would have accomplished the same purpose.

The expense of blowing the organ was thus reduced from more than $150.00 to $30.00 per year for the gas used in the engine.

At the time of this experiment it was intended to use the engine and blower for ventilating the auditorium during the literary part of the exercises.

My studio organ of twenty years ago was supplied with wind by a Sturtevant pressure blower actuated by an English gas engine. Both engine and blower were located in a separate building, and the air was carried to the instrument by means of an underground wind-trunk, and the regulating valve was placed near the organ. It was a large hinged valve placed in a square box a little larger than the wind-trunk. There was not the least noise or jar from the supply. No playing of the full organ would lower the top of the bellows reservoir an inch, there being such a reserve surplus of air in this method. Where a large square wind-trunk is used, a "butterfly valve" would be best, rather than a valve hinged on one side or end.

My last studio organ contained four manuals with four thousand pipes. The wind was supplied by a Sturtevant steel pressure blower actuated by a rapidly revolving Westinghouse steam engine with double cylinders, the steam being generated by common coal oil which was converted into combustible spray by means of an automatic air pump operated by the engine. The tables published by the manufacturers of blowers give ample information concerning the size, speed and number of cubic feet of air supplied per minute, from which reliable calculations may be made.

I have also used rotary hydraulic motors with success where connection is made with the regular feeders by belts. In this case three feeders are used and there is no jerking impulse given to the air, which is a frequent fault with the stroke of the reciprocating hydraulic motor. The best rotary motor with which I have had much experience is the Root's hydraulic motor, made in Connellsville, Indiana. It wastes no water in supplying power, every cubic inch giving its share of power in the motion, which is not the case with those which depend much on momentum. The large organ in the Cincinnati Music Hall is supplied with six of the Roots' motors.

Hydraulic motors have not been used for fan blowers, because the latter must be kept revolving at a constant speed to serve their purpose, which would require a large water supply and be very expensive, and only a powerful rotary motor could be used.

The greatest disadvantage in the use of hydraulic motors is the liability of the water pipes freezing in the winter of our northern climate, which sometimes occurs when every precaution is taken. Often the supply pipes of the street service become so obstructed with ice that the water pressure is insufficient to run the motor. After an organist has prepared an elaborate service, it is very disappointing to have this occur and break up the choir work in the public assembly, and especially the ornate organ part. In one of the last positions I occupied, this was so exasperating that when the Sunday services were held, I did not feel safe with the music in the winter time without having the motor detached and the wind furnished with reliable hand power.

In one's practicing a motor is a great comfort because it relieves that sympathetic feeling in regard to the fact that somebody is making strenuous exertion, especially when the full organ is being played, which frequently terminates in that dismal organ wail which signifies that the assistant organist is "played out."

In the cities of England there are many studio organs with motors, which are rented for twenty-five cents per hour, to students who cannot get access to church organs. But, as a rule, young students have not the means to keep this practice up, day after day, which is also the case in the country where the blowing is done by hand. Where access can be obtained to an organ it is often found practicable for two pupils to arrange their hours for practicing, so that they can take turns in blowing for each other a half hour, alternately, and thus save expense and be an incentive to each other, while the change of exercise is of gymnastic value in regard to a healthy circulation of the blood.

There are few organists who, in earlier days, have not had some experience in blowing, and many there are who, from want of funds, have been compelled to use the manuals and pedals as practice claviers, windless and soundless, excepting to a vivid imagination.

●

German Organ Music.

The fundamental motive of historic German music is founded upon the framework of the old church chorals. A subject is generally worked out simply from the first line of the hymn, the theme being distinct, while a more florid counter-subject is given, the remainder consisting of imitations of both the subject and counter-subjects. Often the whole of the choral is introduced as a canto-firmo, first in one part and then in another, sometimes in the pedal part throughout, as in the second part of Mendelssohn's Third Organ Sonata in A, and frequently the subject appears in the accompaniment in diminution, augmentation or inversion.

Many of the celebrated fugues were written upon a choral theme. Bach's great G minor Fugue is so constructed that in an orchestral arrangement an entire choral is performed upon brass instruments, while the strings are executing the notes as written for the organ.

An old custom is yet preserved in western Germany of announcing the principal choral of the church service, at daybreak, from the tower of the church, toward the four quarters, with a quartet of trombones. At the morning service the organ prelude is upon the same theme, which finally merges into the full, slow familiar choral hymn, augmented by the trombones in the gallery, which is taken up in unison by the entering congregation.

The postlude generally consists of a grand fugue founded upon the same choral, the choral music thus giving a unity to the whole service. This accounts for the many compositions in that form, of the old organists, which are written in a devotional spirit, devoid of

display and all sensational effects. This music is both ecclesiastical and intellectual, in keeping with the traditional religious customs of that part of the world, peculiar to that province, and which, in this country, is only to be found in the Moravian Church, of Bethlehem, Pa.

The extension of more liberal thought in Lutheran Germany has weakened the influence of that church among the intellectual classes, and doubtless during the coming century the form of German organ music will develop in harmony with advanced ideas. For, in the progress of mental growth, the mind does not turn backward to obsolete opinions on any subject, and a religious element of thought will always prevail, although gradually liberated from associations which are mementos of a past ecclesiastical era.

●

Double Shakes.

J. V. U.—"In a reporter's description of a new organ in our city, there were some portions of the accounts, which were very obscure, among which was an allusion to the improved Swell Double Shakes. I suppose this is a new method of causing the tremolo effect by means of a combination of the ordinary valve tremulant and a revolving fan tremulo, such as is used in reed organs. Am I right? The article also spoke of the sonority of the pipe tones being fluently vibrated by means of specially compressed atmosphere, produced by physical power, which was signalized by electricity. Is this compressed air a gas derived from liquid air evolved by means of an electric current?"

Answer.—Either the reporter or proof-reader must have been under a blindfold influence in the description referred to, in which you were misled by thinking of the ancient term "shake," by which the trill was formerly called. The word was intended for "shades," and referred to a double set of crescendo and diminuendo blinds or folds, which are sometimes termed *shades*. This typographical error does not suggest such a savor of garbage as was contained in a local paper which, in describing a new organ, innocently alluded to a "mixture of rank pipes in the swill-box."

All pipe organs sound by means of compressed gaseous combination, composed of 23 parts oxygen and 77 parts nitrogen and, in the case referred to, was simply a gushing way of stating that instead of a mechanical motor, the bellows were pumped by hand power, and that the blow-boy is summoned to activity by means of a common electric dummy-bell, instead of the conventional "bellows signal." The exuberant reporter's description of the entire organ would doubtless be quite entertaining to organ adepts.

●

Removing an Old Organ.

F. R. C.—"The organ I play has thirty stops. It was built twenty-eight years ago by a Boston maker, and stands in the gallery opposite the pulpit. An annex has been prepared for it in the rear of the platform and we are nearly ready for the removal. Can you give me an idea of what the expense may be if done by experts, and how long it will take? We are in a Western town remote from an organ factory, and I would like to know if it would be possible for me to take down and set up this instrument with such assistance as I could obtain here, and the probable time it would take. I understand the general mechanism of an organ and have always kept the reeds in tune. I also tune pianofortes and have a knowledge of temperament. Will you kindly indicate some of the details of the order of taking down and setting up an organ?"

Answer.—Boston builders charge $8.00 per day for each man sent to do work outside the manufactory, reckoning the time from leaving the shop until their return. To this price is added car fare and hotel bills. It would take two men at least from eight to ten days of steady work in the church to take down, clean, regulate and tune the instrument after setting it up. It is generally customary to send one experienced man for such work when the distance is considerable, who will hire such assistance as he can obtain at hand. You can thus calculate the expense, adding to this, assistance in lifting the bellows, chests, and the heavy portions, besides the blowing for tuning.

Should you undertake the work, it would require a much longer time to do it faithfully, perhaps three weeks, as you would have to learn the order in which everything would fit the required place. It is rather difficult to indicate the work other than in a general outline. In taking down the instrument you will arrange to put each part in such order in the pews and aisles so that in putting together the work you will proceed in the reverse order of taking down.

You will first take out the front pipes, beginning at the left and mark on the back of each, numbering from one, upwards. In taking them out be careful not to hit the tuners on the rack. Carry these pipes to a corner of the audience room, and stand them on the top end, so that the toes will not be jammed, giving them a slant so that no jarring will cause them to roll or fall. Next, number from the left, the corresponding zinc conductors which go from the top board to the foot rests of the front pipes, and carefully take them out without indenting them. These conductors are generally glued in at each end. Place these conductors with the front pipes Then take out the racks or frame above in which the pipes are held, if the support of the case does not depend on them. Number these racks, and place them with the front pipes. In removing any work held in place with screws, first mark on fresh witness marks, of two lines which intersect, and place a corresponding number on the adjacent parts. It will be well to record these numbers in a memorandum book to avoid any confusion in setting up, or getting things in reversed order.

Then take out all the pipes of the Great section beginning with the front rack. It will be well to have a number of simple trays of half-inch stock made, as many as there are metal stops, four feet long by thirty inches wide, into which the pipes should be carefully laid, so that the mouths shall not be injured, and then carry them and leave them in their respective trays in their order in the pews. The pipes which are more than four feet long may be stood up on their top ends. The wood pipes may be carefully piled together and placed in the pews.

After the pipes of the Great section have been removed, take out the Gt. rack boards without splitting them, numbering them from the front, and take out the rack pins. This will give you a place to stand while taking out the Swell pipes. Then number and remove the Swell folds, and take out the Swell pipes.

Next remove all the accessible pedal pipes, and place them in piles horizontally in the aisles. Then remove all sustaining racks. Next take the case down beginning with the top ornaments and sections, providing the case work is independent of the building frame which sustains the chests. If the stringers are fastened to the case, the chests must first come down after the action work is removed.

Next take the Swell box apart and remove it. Then take up the Swell rack boards and pins. Then b gin to take the action work out, first removing the stickers at the keyboard, and tying them into bundles, wrapped with paper and labelling them. If any part of them are of different lengths, they should be numbered. All roller-board trackers should be numbered, and marked C or C♯ according to the side on which they are. Most builders have the C side at the left as you face the organ, and the C♯ side at the right, while the Hook organs of years ago placed the C pipes on the right.

Then remove all the trackers, being careful not to bend the pull-down wires in the chest. If the leather buttons are too loose, new ones must be supplied. Remove all the manual and pedal trackers, and then all roller-boards. Next remove all the stop action. Next the wind-trunks.

To avoid injury to the slides which project, it will be advisable to remove the top-boards and take the slides out, tying them together, and numbering them. This will render the wind-chests lighter, and as they rest on the frame with dowel-pins to hold them in place, with ample assistance they may be lifted out and carefully lowered over the front of the gallery, resting them upon the side, guarding against the pull-down wires becoming bent by cleating on thin strips of wood over them, before the chests are removed. Two long ladders slanting down from the gallery will serve as skids for lowering the heavy parts by means of ropes.

After the wind trunks, chests, and pedal pipes are removed, the building frame is to be taken apart, which will leave only the bellows. Take off the weights and save each one to be used again so that the same pressure may be retained in setting up. After the bellows have been removed, only the ground frame will remain. This locates the position of all the parts of the organ. Before removing this, mark the exact center line, which will be the center of the organ in its new position. The dowel holes for the building frame, bellows and pedal chest frames will thus relocate every portion in setting up.

In cleaning the pipes from the dust of years, use small brushes, but do not change in the least the upper or lower lips or press upon the language, or disturb the tuners. All frictional bearings should be recoated with powdered black lead, and new trackers inserted. as well as new leather buttons provided if the old ones are loose. It will be well to stick each screw into the tallow of a tallow candle so that all will turn easily, and each screw should be driven firmly home, excepting in the top boards, which must be regulated after the pipes are in, so as not to bind upon the slides, and yet must be tight enough to prevent the wind escaping between the top-boards and chest. For this reason be very careful not to remove the thin bolster papers which are on the bolsters between the slides.

Be careful that the ground frame is properly located at the start. Use a level upon all the upright posts and standards, otherwise the action work will not come true.

Before connecting any of the action work, after the wind chests have been placed in position, clean each valve from the dirt and debris which may have accumulated from the changes of position. Take a narrow and thin piece of wood and glue on a strip of sand paper which will act as a remover. Pull down each valve and draw out any obstacles which may be upon the leather, being careful not to carry any debris toward the heel of the valve.

Then proceed in the same order of setting up, which will be the reverse of taking down. Put your reed pipes in last after the flue pipes have been tuned. Directions for cleaning the reed pipes were given in one of the back numbers of THE MUSICIAN. If you meet with any obstacle in this work you are at liberty to write me, which I will give immediate attention. You will have a difficult job for a novice and it would be much more satisfactory to you to engage a reliable organ expert to take charge of the work and for you to act as his assistant.

●

A Permanent Manual Coupler.

G. M. A.—"I have purchased the materials of an old three manual organ from which I intend to fit up a studio organ for my pupils. I am thinking of utilizing the three keyboards for a two manual organ, placing the old swell and choir chests in one swell-box, so that the pipes will be played from the upper manual and using the middle keyboard as a permanent coupler between the Swell and Great. Do you think it will be a practical idea?"

Answer.—Yes; it would be practical, but if you have all the parts and action work of the organ, why not set it up as a regular three manual organ, which would be of more value to your pupils? I presume that the compass of the old swell section in itself alone was not satisfactory. If you make your keys overhang in the new adaptation it will be more available as a permanent coupler. It will always be in readiness and be more effective in solos and accompaniments upon either manual. You would also have a clear pedal coupler, which would enable you to use your Gt. coupled to Ped, without the Swell bass sounding when you are playing the Swell and Great coupled on the middle keyboard, which is not possible, as two manual organs are constructed without introducing what is termed a "clear coupler."

●

Loose Leathered Valves.

J. W. B.—"I would like your advice in regard to the valves of the old organ which I play each Sunday. This summer I have had more trouble than usual. A number of the valves when the keys are pressed do not admit the wind to the pipes. The action work is not out of order, and when I take out the bung of the wind-chest the valves all open. I have had a local organ repairer look at it, and he said that the pipes were stopped with dirt, but on taking out the pipes of each stop, which would not sound, they were all right, and he said that it was beyond his comprehension. Can you account for this trouble?"

Answer.—Yes. The organ was probably made when the valves were covered with several layers of leather and the heels are firmly fastened with leather, instead of the modern way of felting the valves and then having one layer of pallet leather and with heel pins so that the valves can be removed separately. When you open the wind chest so as to see the valves work they appear to open all right, but the humid summer air has unglued some of the layers of leather, so that when the bung is in and the valves are opened the wind pressure blows the loosened leather over the channel. Temporarily you can insert some glue between the layers, being careful to get no glue on

the surface, but eventually the valves must be releathered by taking them all out in the way known to organ builders.

●

New Organ Music.

Organists everywhere will welcome the issue of a new series of fresh and interesting organ compositions, which are published, under the quaint title of "*The Organ Loft*," edited by Dr. Charles Vincent, of London, Eng. The selections consist of original pieces suitable for use in public worship or for recital purposes. The music is modern in style and is intended to illustrate the best characteristics of the present school of English organ music, which is a standard in every respect. The publication has the sympathy and hearty coöperation of many of the best organists and composers of the day. The pieces are supplied with annotations for program purposes and are fully marked for registration. Each monthly issue consists of from sixteen to twenty pages of music, in oblong form, engraved in the best style, on good paper. Single copies are 60 cents and the subscription price is $2.50 per year. The first number was issued in June, of the present year, and contain a Berceuse in F, with a simple pedal part, by Edmundstoune Duncan, four pages; a Grand Choeur in D, in the style of Guilmant, by William Reed, six pages, with a fugal development, and "The Flight of the Soul," an expressive In Memoriam composition, in Ab, of five pages, by Dr. Edward E. Harper.

The July number contains a Coro Grandioso, in D, of six pages, by George F. Vincent; a Pastorale, in Bb minor, of seven pages, by August Wiegand, and a Cantilene, in Ab, of four pages, by J. A. Meale, a very graceful, expressive melody, well calculated to display the soft solo stops of an organ and, while simple, the accompaniment is artistic and effective.

●

Short Service Prelude No. 6.

In studying the structural form of this Andante Religioso, it will be noticed that in nearly every measure there is a rhythmic imitation of the initial measure of a quarter note in the first beat, succeeded by four eighth notes, this imitation alternating between the various parts.

In the first sixteen measures there are no changes in registration and the bass may be taken by either manual or pedal. When taken by the pedal the right hand may play the treble upon one manual, and the left hand take the alto and tenor upon another manual.

At the seventeenth measure the right hand plays upon a solo stop, such as the Melodia, the left hand taking the responsive accompaniment upon the Swell Open Diapason, the pedal giving detached quarter notes, so that the sense of rhythm is made distinct. The first eight measures of this solo are in G minor, but at the twenty-fifth measure the G major solo may be played upon the Dulciana and Flute combined, instead of the Melodia.

At the thirty-fifth measure a varied form of the original theme is introduced which leads to the cadence. There are no unexpected transitions to remote keys in this Andante Religioso, which illustrates a form of composition in which a simple theme is homogeneous throughout, without episodes which have no relation to the thought embodied, which thought is to be considered independent of the registration.

●

Regular Attendance at Rehearsals.

C. B. P.—"How can I interest the volunteer choir, of which I am the leader, so that they will attend rehearsals and services more regularly?"

Answer.—In addition to sincere manifestations of friendship for each member and the exercise of tact in your management, much depends upon the character of the music which is selected. You will probably have to look through fifty pieces in order to find one that will interest the members of your choir. Do not spend their time in practicing on pieces which you have not thoroughly tested and decided upon before rehearsing.

Leaders who cannot form an opinion of the merits of an anthem until they have had the choir try this or that piece before they can make a decision, are apt to be vacillating, and will hear expressions of dissatisfaction from various members. Have every piece selected for the rehearsal without consulting the members, and yet never ignore their opinions and accede to their desires when special pieces are asked for.

Keep your repertoire as fresh as possible with the best quality of devotional music, according to its grade. Try to elevate the standard without ignoring the fact that the majority of people do not possess an educated musical taste, and yet do not be too narrow in your judgment of what constitutes a true standard. Be careful to use melodious selections which are artistically adapted to give expression to the words set to them.

One of the great difficulties which a leader has to contend with in holding a voluntary choir together is irregularity of attendance. No doubt there will be communications from other choir leaders illustrating various methods of interesting the singers, which will be duly inserted in these colums.

●

The Vibrato Disease.

C. B.—"Is the vocal tremolo appropriate in church service? Our soprano singer indulges in it on all occasions, and when singing with the other voices it does not blend well and seems to throw them out of tune?"

Answer.—The vocal tremolo is not appropriate in a church choir, and its frequent use anywhere is not an evidence of culture, but is a serious defect in the rendition of good music. Yet it is an artificial device which young singers strive to accomplish at the outset in their voice culture, as if they would make the impression that they have attained a proficiency beyond what they possess. The vocal tremolo is an alternate wave above or below the true sustained tone and in effect is really out of tune. Instead of being a graceful accomplishment it is a serious and painful defect, and an affected habit which, when once acquired, is very hard to eradicate. With the vocal tremolo the true note is never sure in pitch and the singer is to be pitied who is wedded to its use. It does not blend with other voices because it renders the voice out of tune and is irritating, both to the other singers and listeners. A pure, steady tone which can be uttered with the least amount of breath in the softest pianissimo and then swelled without a break in returning to pianissimo is evidence of higher culture when this can be done with each tone, than the artificial oscillation of the vocal cartilages, which will become weakened by such constant shakings.

●

Improvement in the Singing of the Words.

H. B.—"I would like some help concerning the enunciation of words when sung by the choir. It is the only point in which my Sunday music is criticised."

Answer.—It is a very important point in devotional music where the audience have no words to look over as in the hymn books. Quartet choirs now make this a chief feature of their work. Yet a friend who is employed as a musical editor, recently attended one of the wealthy Boston churches to study the choir work, where the most expensive choir is employed. He reported to me that he was greatly disappointed in the enunciation, and that in none of the selections outside of the announced hymns could he tell what the words were or what the singers were singing about. If *he* could not tell, an organist and director of music for thirty-five years, one whose compositions are well-known, how could it be expected that the less acute ears of a congregation could comprehend the meaning of the music or the sentiment? It would be better in an artistic sense, to sing to the syllable La, so as to obtain more resonant tones. Better let the minister announce the subject on which the music was composed, and let the choir use the solfeggi! If words are sung together, they should be heard, excepting when different words are sung at the same time, or else have programs with the words in full.

Get your singers interested in the subject. Have them read over the words in concert so as to know what they mean, and then in uttering them, keep in mind the idea that some one at the other end of the church is listening to hear every word enunciated with the music, giving the pure vowel sounds until the end of each note. True artists enunciate the words distinctly.

●

The Words in Fugal Compositions.

G. B. C.—"How is it possible for the words of an anthem or chorus to be heard when the voices do not take up a musical subject or a sentence together, some voices singing one word and others another word, and sometimes four different words being sung at the same time? Are there not exceptions to the iron bound rule that all words must be heard when a chorus sings?"

Answer.—The rule to be observed is that the singer on each part shall so utter the words that all the words of an individual part shall be distinctly enunciated. That is all that is required of the singer. In a fugal chorus it is not possible to hear different words at the same time, but there are portions of the chorus in which the sentiment is expressed by the voices uttering the same words simultaneously. When a fugal theme is given out by one part, the same words are taken up in succession in the answers and re-entrance of the theme. The words of such anthems are so familiar, as in an elaborate Te Deum, that the sentiment is clearly understood. The singer is only responsible for his own part just as the composer has set the words. The iron clad rule is not that the listeners are obliged to hear the words in such a case, but it is obligatory upon singers to distinctly enunciate the words.

●

The Grading of Choir Music.

M. G. B.—"In your method of grading choir music from I to VII, will you please tell me in what grade you would place Handel's 'Hallelujah Chorus' from the 'Messiah,' and your reasons for doing so?"

Answer.—The "Hallelujah Chorus" would be placed in Grade III. It is placed in this grade because it is not a difficult piece to sing as soon as its rhythmical form is understood. The intervals belong to simple harmony and there are no distant modulations. In the grading of choir music, the number decided upon depends upon the simplicity or difficulty of the progression of parts, the rhythmical form and modulations. The pitch of the voice is only mentioned in the soprano part, and has nothing to do with the grading. In the "Hallelujah Chorus" which is in the key of D, it is unfortunate for the tenors in a chorus choir on account of the effort of the tutti in reaching high *a*. It would be better to transpose the accompaniment to the key of C. Some editions are printed in this key.

In grading an anthem, sometimes nearly the whole piece will be in Grade I or II, when a difficult modulation for a few measures only, will cause the marking to be in Grade III or IV. The organ accompaniment has nothing to do with the grading, for even in I or II, there is an elaborate obligato organ settings. In Grade I, simple chromatic intervals are included, but not remote nor enharmonic changes of key. Grades I and II may be easily read at sight and perfected in one rehearsal. Grade III would need more than one rehearsal, as well as Grade IV, but the grades beyond, would require cultivated singers who are well advanced in musical knowledge and constant practice.

●

Selected Choir Music.

At the request of choir leaders remote from access to a large stock of music, many church compositions have been examined and graded for the benefit of THE MUSICIAN choir-directors.

The choir music most appreciated and understood by a congregation is included within the first three grades for American church services. The grades beyond require an educated musical taste to enjoy, and also singers beyond the average attainments. Where music is above the comprehension of the hearers, it misses the requirements of devotional music, although it has its place in specially prepared musical services as an educational factor, because the people assemble with the expectation of hearing music of a higher order than in a devotional service. In the selections here given, the key is indicated, the general movement, time occupied in performance, number of pages, price, highest note of soprano, and whether with or without solos. They have been selected independent of the date of publication or authorship.

There are two sides to musical criticism, both equally interesting; the one, which is scientific analysis of musical form and treatment, possible only to experienced musicians, the other, which is the spiritual perception of the æsthetic side and influence of music, possible for any great mind whose perceptions are keenly cultivated in the highest canons of any art. Schumann represented the ideal musical critic, in that both of these essential points in criticism are to be found in his writings.

Ruskin, of course, never realized music scientifically or technically at all (and one does not claim for him the position of a musical critic), but this perhaps renders his thorough perception of its spiritual and æsthetic value all the more remarkable, combined as it is with a sort of clairvoyance (for it can only be so named) into the "deeper meaning," which must underlie all the true art, and especially the art of music.

IN THE MUSICAL WORLD.

AMONG OUR SCHOOLS AND TEACHERS.

Mr. Liebling pfayed a fine program before his pupils (the first recital of the season), on September 28. The program was made up of the following Sonatas: Sonata in G minor, Scarlatti; Sonata in A flat major, Op. 39 (first movement), Weber; Sonata, Op. 27, No. 2, Beethoven; Sonata in G minor, Op. 22. Schumann.

All users of the Janko Keyboard and those who feel any interest in its advancement, are invited to send their uames to Prof. Welmar Robert Schmidt, Holyoke, Mass. The idea is to bring all in immediate association in order to have a clear point of view in regard to the real worth of this invention, and to help along its success.

Mr. R. Plask Hubbard, who for years has been identified with the musical interests of La Grange, Indiaua, more recently as organist of the First M. E. Church, and for the three past years supervisor of music in the public schools of La Grange, has removed to Paris, Mo., where he goes to accept the positiou of supervisor of music and conductor of the Paris Choral Union.

Mr. Judson W. Martiu, director of the Yankton (Dak.) College Conservatory of Music, played the following program at an organ recital before the State Christian Endeavor Convention, September 25: Suite Gothique, Boellman (*a*) Chorale, (*b*) Menuet Gothique, (*c*) Priere a Notre Dame. (*d*) Toccata; Andante from Fourth Symphony, Widor; March of the Magi Kiugs, Du Bois; Marche Funebre et Chant Seraphique, Guilmant; Torchlight March, Guilmant.

Conspicnous among prominent teacbers and musicians of this country stands J. H Hahn, the energetic head of the Detroit Conservatory of Music, who is known as the pioneer music teacher of this city. The school begins its twenty-seventh year and Mr. Hahn may justly feel proud of his work aud of the able corps of teachers with which he has surrounded himself. The Wednesday weekfy concerts are a feature of the institution, the closing one last June being 1,065. While Mr. Hahn is busy the greater part of the time teaching, he stifl finds an opportunity to write some of the daintiest and most brilliant songs published, his "Love Me If I Live," "Break, Break, Break," "The Proposal," and "Love Thee Dearest," eliciting the highest praise from the musical world.

Talking of Hofmann, said a well-known critic the other day, reminds me of several curious things that I overheard at one of his recitals when he was here last Spring. In front of me sat a good looking young girl thirty, or thereabout. Said another girl to her, this one about forty, at least: "How do you like Hofmann, my dear?" "Like him!" was the answer. "He's adorable. You know I've been in love with him for years. When he was here last I was a bread and butter school-girl, besides he was a trifle too small. But now!" There was a sinister gleam in her off eye that betokened ill for the young genius. Later I heard a little boy back of me say to an old lady, evidently his grandmother. after Hofmann was through playing a Liszt Rhapsody. "I wonder if Joe could lick Terry McGovern?"

AT HOME.

Mr. S. Becker von Grabill, who has won eminence as a pianist, will tour the entire couutry during the seasou of 1901-1902.

A sacred concert was given by the choir of St. Nicholas' Church, at Atlantic City, recently. The choir was assisted in an excellent program by eminent artists, and the concert was very successful.

At one of the concerts given by Sousa's band at the Western Pennsylvania Exposition at Pittsburg, in September, Mr. Ad. M. Foerster's Dedication March, written on a theme built on A—C., the initials of Andrew Carnegie, was played. Mr. Foerster's large works have long been on the programs of the leading orchestras.

A really fine program was played by Mr. W. D. Armstrong, at the dedication recital of the Priest memorial organ, placed in the First M. E. Church of somewhere (place not named), as a memorial of her husband by Mrs. Lucia I. Priest. Mr. Armstrong was assisted by Mr. Charles Hogan, tenor, and Miss Lizzie Boyle, accompanist.

Fritz Kreisler, the Austrian violinist, who made such a remarkable success In this country last season, will return again in January. He will open his season on January 10 in Chicago with the Thomas Orchestra, after which he will be heard in the larger cities, including San Francisco and the Pacific Coast. Kreisler is now in Paris where he is giving most of his time to the working up of a new repertoire for his forthcoming tour.

The report of the registrar of the Temple Choir (Brooklyn), of which E M. Bowman is choirmaster, shows the following averages of attendance for six years. 1896, 96 per cent.; 1897, 96.05 per cent.; 1898, 96.02 per cent.; 1899, 95 07 per cent.; 1900, 96.52 per cent.; 1901, 97.37 per cent. (To June 30). Grand average, 96.17 per cent. This is a remarkable showing and plainly indicates the interesting way in which the choir is directed.

The following program of ensemble music was played by Mr. Liebling and Mr. Allen Spencer in Chicago, on October 8. They were assisted by Mr. Glenn Hall, tenor: Hommage à Haendel, Moscheles; Impromptu, "Manfred," Reinecke; Vocal—Serenade, Brahms; "Du bist wie eine Blume," The Hidalgo, Schumann: Andante and Variations, Op. 46, Schumann; Vocal—Stornello, A. Vannini; Irish Love Song, Margaret Lang; Fortunio, A. L.; Thy Beaming Eyes, MacDowell; Variations on a Theme, by "Beethoven," Saint-Saëns.

Miss Estefle Liebling, the young prima donna soprano who enjoyed a remarkable success In the Royal Opera at Dresden last winter, and was later heard in a number of operatic concerts in Berlin, arrived recently from Hamburg. She comes to this country to sing in a series of fifty concerts, which will be given in the principal cities throughout the country and in Canada. Negotiations are also pending for her to appear with the Mauricc Grau Opera Company in the beginning of the season as well as in a series of concerts with Josef Hofmann.

Jean Gerardy, the noted French 'cellist, who is coming to this country by way of California about the end of this month, will open his forthcoming tour with a number of recitals in the West before he will be heard with the Boston Symphony Orchestra. Since last May, M. Gerardy has been concertizing in Australia, New South Wales, New Zealand and Honolulu. During that time he has given fifty-five concerts, half of which were given in Australia. In the antipodes the critics hailed him as the successor of Alfred Piatti, the noted 'cellist who recently died.

Josef Hoffman, who comes to this country in November next for his first extended tour, is now in Sweden preparing himself for his coming visit, and incidentally experimenting with a new motor for his automobile. The latter he intends bringing with him to this country. For his motor patent he has already made application to the Patent Office In Washington. Hofmann's engagement begins with an appearance in New York city with the Philharmonic Society when he will play the Rubinstein D minor Concerto. Following this he will give two recitals in New York, then visit Boston where he will play with the Boston Symphony Society under the direction of Mr. William Gerike. He will also be heard with the Boston Orchestra in Brooklyn, Philadelphia, Baltimore and New York, during the month of December. He will also be heard in recitals in Boston, Chicago, Cleveland, Buffalo, Rochester, Syracuse, Pittsburg, Washington, St. Louis, Cincinnati and in the larger cities in the South and West to the Pacific Coast, and the North-West and in Canada. In the Spring he will visit Mexico.

During the coming season Herr Carl Armbruster, the celebrated exponent of Wagner music, who for years was a personal friend of the great "Meister," and was professionally connected with him. In his lecture tour, Herr Armbruster will have the assistance of Frl. Pauline Cramer, who has been identified with Bayreuth as one of its leading sopranos. All of the lectures will be vocally and instrumentally illustrated and a series of steriopticon views of the life of Wagner. The lectures will be principally on the Wagner music dramas, though Herr Armbruster is also noted for his interesting talks on the lives and compositions of other noted musicians including Schubert, Schumann, Loewe, Berlioz, Liszt, Brahms, Rubinsteln. etc., including such works as: Lohengrin, Die Meistersinger, Rheingold, Die Walkure, Siegfried, Gotterdammeruug, Tristan und Isolde and Parsifal. Mr. Armbruster's lecture on "The Nibelungen Ring," is so arranged that he can give it in one lecture if desired. Iu the lecture on the Life and Works of Richard Wagner, Herr Armbruster shows Wagner at different ages during his lifetime, his birthplace in Leipzig, his home "Wahnfried," in Bayreuth. scenes of Bayreuth looking from the porch of the "Festspiel Haus," or theatre, views of the theatre and other interesting scenes all connected at some time with Wagner. Herr Armbruster came to this country for the first time last Winter and delivered a course of ten lectures at the Lowell Institute in Boston, where his success was such that arrangements were made for him to return this Winter to repeat the ten lectures and give ten new ones. In addition to his series at the Lowell Institute, he will give five public lectures in Boston, five in New York, two in Brooklyn and one each in Philadelphia, Baltimore, Washington. Cleveland, Cincinnati, Chicago, St. Louis, Milwaukee and other Western cities, as well as in the leadlng Universities in the East.

At the meetiug of the General Council of the Lutheran Church, in Erie, in 1897, it was, on motion of the Rev. Dr. Schmauk, resolved, "that the General Council would look with favor upon an annual convocation of the organists, choirmasters, and pastors of musical taste and ability within the bounds of the Council, in order to present and discuss questions connected with the rendering of the Lutheran service and with Church music in general; that the same may be raised to a higher and more uniform standard, and that the musical treasures of our Church may be made more widely known." At the same meetlng a committee was appointed to carry this resolution into effect. Accordingly, three such convocations have already been held, and a fourth one has been arranged for, to be held in St. John's German Lutheran church, Buffalo, Tuesday and Wednesday, Oct. 8 and 9. The program is as follows: Tuesday, October 8, morning sesslon. Matins (Full Choral Service). Paper: "Organ Preludes and Postludes," Mr. C. A. Marks. Afternoon session, Organ Prelude. Paper: "Choir Music of the 16th and 17th Centuries," the Rev. Dr. A. Spaeth; Paper: "The Deterioration of Choir Music," the Rev. J. F. Ohl, Mus. D. Evening session, Vespers (Full Choral Service); Address: "Church Music as a Part of our Educational System," the Rev. R. Morris Smith. Wednesday, October 9, Morning session, Morning Service, with the Holy Communlon (Choral); Paper: "The Locatiou of the Choir and Organ," the Rev. Dr. G. C. F. Haas. Afternoon session, Paper: "The Proposed Summer School for Church Music," the Rev. Luther D. Reed. Miscellaneous Discusslons and Business. A feature of very special interest at this convocation will be the full choral rendering of Matins, Vespers, and the Morning, or Communion Service, by the choir of the First Church, Pittsburg, according to the traditional music that developed with and belongs to these services, and now for the first time arranged througnout for use with the English text. This music, the true liturgical music, today unknown and unsung in our churches, has a character of its own that differentlates it from modern music, and that makes it at once the most faithful and the most reverent expression of the devotions inspired by the text. In providing for the proper rendering of this music as an object lesson for those who will attend the convocation, the committee had in mind more especially the fatter part of the Council's resolution under which the convocations are held.

ABROAD.

BAYREUTH, August 31, 1901.

Editor of THE MUSICIAN:

Just after writing you a few days ago that there was apparently no chance of my securing tickets for the cyclus of "The Ring of the Nibelung" f did suceeed by a curious chance and almost at the last moment. I had gone twice to the bureau on the morning of the day "Rheingold" was to bc sung; first, to ask if there was any use in putting my name down for any tickets which might be returned during the day; and, later, to know if there was any hope of getting a seat in the gallery. Both Inquiries met with decided negatives. I then gave up, and since the place was near the station, determined to sit down and plan my journey for the afternoon and then go across the way and find out about the necessary trains. So I drew out my pocket map and was soon jotting down the names of placcs—Carlsbad, Dresden, Weimar Elsenach, etc., when suddenly a functionary stood before me, a long, pink slip in his hand. He explained that it had just been unexpectedly returned, and, since f was the only one in waiting, it fell to me. So, instead of a journey by rail that afternoon, I took a much more agreeable one on foot, under the double line of trees which leads up to the Festspielhaus, to hear "Rheingold."

This is heard much less frequently than the dramas of the trilogy to which It forms the prologue. This is largely on account of its scenic exigencies and also, perhaps, because it is less Intcresting as a drama, the *dramatis personae* being confined to supernatural, or semi-supernatural, beings—gods, water nymphs, giants, dwarfs. After seeing it in Bayreuth, on the stage and with the mechanism especially constructed for it, one cannot wonder at its Infrequent production in ordinary theatres. The opening scene, representing the bed of the Rhine, with the sportive nymphs darting through the water, was a wonder of scenic art. Not less remarkable was the descent of Wotan and Loge into Nibelheim. Rolling clouds of vapor, tinged with subterranean fires, half concealed, half revealed, mighty rocks and yawning chasm, which sank to the sound of some of the finest descriptive music ever written.

If, in what I have to say about the scenery I seem to put undue stress upon what is usually considered a mere adjunct, it must be remembered that Wagner intended his art to consist of a complex, but equal, union of all the arts—painting, sculpture as exemplified by gesture and attitude, poetry, music. As a matter of fact, he failed In his attempt, his art, in spite of his efforts to the contrary is unequal; Wagner, the musician, is greater than Wagner, the poet, playwright or stage-manager. It is his music which vitalizes and gives meaning to word. gesture and scene, though with the short-sightedness of genius he never seemed to know it. It will be seen that, according to his theory, scenery assumes an importance and meaning which removes it entirely from the category of a merely decorative background. The mechanical devices at command in the Festspielhaus make it possible to invest the scenery and its changes with suggestions of poetry, and even of emotion, entirely out of the question in ordinary theatres. Thus, for example, take the last act of the second music drama of the "Ring," "Die Walküre," in which Brünhilde flees from Wotan's wrath and seeks protection for Sieglinde among her sister Valkyries. The sky is overcast; rolling clouds gather and thicken as Wotan draws near. At his entrance they lower black and forbidding and sweep angrily aloug, almost touching the earth. After his first explosion of anger is over and his heart is moved by Brünhilde's pleading, they grow lighter and move more slowly, until only a few wreaths of vapor float lazily against an azure sky. As he takes her in his arms these also melt away and a golden gleam illumines the sky. But as he realizes the irrevocable necessity to which her disobedience forces him, this gleam quietly fades away; twilight creeps on, and by the time he kisses her eyelids into a dreamless sleep all is cold and gray. Then, at his call to Loge, the fire-god, to guard her from all but the destined hero, during her slumber, a writhing, serpent-like flame appears, eating its way along the edge of the rocks; the background begins to glow with luminous vapors, billows of fiery sparks arise and thus the curtain goes down to the chime of tiny bells and the magic fire motive. It will readily be seen that this is no ordinary stage-craft; it is stage-craft informed with reason and sentimeut. In this point, and in no small one, Bayreuth rules supreme.

Another point of supremacy Is the sunken orchestra. This subserves two important ends—it aids the artistic illusiou by removing the gesticulating conductor and his forces from the eyes of the audience and tempers the fury of Wagner's orchestration to singers and hearers alike. A blending and beauty of tone is thus secured which is a revelation to those who have always associated Wagner's music with heavy and overpowering orchestration. It is astonishing how easy it is in the Fiestspielhaus for the ear always to follow the singer in even in great climaxes. There is no lack of power when power is required, but the often too obstrusive brass is mellowed and softened into being an aid, instead of an obstructiou, to the voice. One should hear Wagner, at Bayreuth, before condemning him for obstreperous orchestration; it would then be clear that he calculated his effects by the peculiar conditions which prevail there, and is not to blame for the lack of such conditions elsewhere.

Judging by these performances, however, the vocal standard of Bayreuth is decidedly lower than with us. That is to say, the best singers are not, regarded as singers, equal to the best singers we hear in the "Ring" in America, *e. g.*, Lillie Lehmann, Nordica, Ternina, the de Reszké brothers. Not that one does not hear good singing in Bayreuth, but it is by no means the rule, and is more often heard from the women than from the men. Spirited and distinct declamation is, of course, the main thing considered by the artists there, but many fail to realize that it can be combined with beauty of tone. Theu Wagner's music is not exclusively declamatory—far from it—and that style is often applied to *cantabile* passages where it is manifestly out of place. Burgstaller, for instance, sang the beautiful spring song in the "Walküre" in a most irritating, chopped-off way, which it is to be feared, is a characteristic of the Bayreuth school of singing.

To my mind the chief defect of the performance of the "Ring" was the weakness of Ellen Gubranson as Brünnhilde. Her voice is good; from a technical standpoint she sings well, so that her deficiencies are temperamentaf rather than vocal. She also lacks physical endurance as the final scene in the Götterdämmerung plainly showed. She is, no doubt, a conscientious artist, but totally lacking in magnetism. Van Rooy sang Wotan with force and dignity, though the uncut performance was something of a test to his voice, and towards the end showed an occasional hoarseness and unsteadiness. Wagner seemed obsessed by the story of the Rhinegold and the fatal ring which was forged from it. Though *Rheingold* tells us all about it, he uever wearies in having his characters tell and re-tell it on every occasion, and thus the work is spun out to an inordinate length. Götterdämmerung, for instance, lasted from four o'clock until ten, including an hour and a half for intermissions. This is bad enough in Bayreuth, but out of the question in any place where music is not the all-absorbing business of the day. The ordinary cuts must be made if the "Ring" is to live outside of Bayreuth. Last winter it was given complete in several American cities. A Philadelphia musician was asked what he thought of it. He answered that he felt like the girl who went down for the first time on a Canadian toboggan slide; she said she wouldn't have missed it for five hundred dollars and that she wouldn't go through it again for a thousand.

Wagner also took great pride in his dramatic abilities, yet in construction, the "Ring" is singularly weak and contradictory The "Ring" is supposed to give absolute power to the one who possesses it, yet as a matter of fact, the exact contrary is the case its power appears to be the helpless prey of any who wish to have it. Alberich, the dwarf, after he has forged it and is wearing it, is seized by Loge and forced to give it up to Wotan. He in turn is obliged to yield it to Fafner in order to release Freia. Fafner, while guarding it, is killed by Siegfried, who in turn is killed by Ifagen while the ring is on his finger. Not to speak of Brünnhilde who, during the short time it is in her possession, tries by its power to defend herself from Siegfried, who, in the form of Gunther, tears it from her hand in spite of its magical reputation.

In *Siegfried*, Kraus, whom I had heard a number of times in the title part, surpassed himself. Though by no means perfect as to vocal method, his fine voice and temperament carried him triumphantly through the trying music. His death scene and the story of his life which precedes it were given with a consummate mingling of force and delicacy. A striking instance of the intimate linking of scene, tone, and action, which is so characteristic of Bayreuth, was the lurid, heavily barred sunset which came on when he was struck down by the treacherous Hagen. As his life ebbed away the light in the sky also faded; heavy clouds descended and filled the glen, and while the horror-stricken men, enveloped in mists placed the dead hero on his shield and slowly bore him away, the wonderful death march, which gathers up the broken threads of his life, pealed forth with thrilling effect from the mystic gulf below the stage.

The "Ring" was directed by Siegfried Wagner, the son of his father, with discretion; indeed, had he been a trifle less discreet the effect might have been heightened. Not unfrequently the orchestra might have brought out the motives a little more boldly, especially in such places where the main interest lies in the orchestration, and there are many such. I saw him several times outside of the theatre. He bears an undoubted likeness to his father, but the lines which storm, and stress, and battle with the world left on the face of the latter are totally wanting on the smooth, smiling face of his son. He may come into an inheritance of genius, but I doubt it.

The future of Bayreuth rests on the future of "*Parsifal*." This was first performed in 1882, and since then has been the chief magnet in drawing hearers from all parts of the world to Bayreuth. Its copyright, however, is drawing to an end, and then it will be open for performance in any theatre. A strong effort is being made to extend it, but this requires a special act from the legislature, which meets with decided opposition. Some see in it only an attempt on the part of Frau Wagner for further gain and personal aggrandizement; others argue that the religious character of the work would be profaned by its promiscuous performance under irresponsible conductors in ordinary theatres. A committee, appointed for that purpose, is circulating petitions to the legislature to take favorable action on the proposed act for extension of copyright.

The financial return from the Festspiele must be very great. Eighteen hundred places, costing five dollars each, are taken for every one of the twenty performances, which makes a total of $180,000 for the season of six weeks. No wonder that managers look with longing eyes on "Parsifal!"

FREDERIC S. LAW.

PUBLISHER'S COLUMN.

The music supplement of this number contains eight pieces, retailing in sheet form at from 25 cents to 40 cents each—amounting to a total of $2.55. Following are the eight pieces referred to above:

Phantasy Pictures—Tone Piece. O. Mallling. Op. 16, No. 3.
Bright *scherzo*, largely in octaves and broken chords equally distributed between the hands.

A Life's Lesson Song. W. D. Armstrong.
New and beautiful setting of James Whitcomb Riley's well-known poem. For medium voice.

The Two Zithers O Schleuning. Op. 49.
Pleasing study of reversed arpeggios. Excellent and effective imitative composition.

Childrens' Festival—Waltz F. A. Williams. Op. 31.
Especially adapted for recreation, but useful for teaching purposes. Splendid little composition.

Little Obstinacy—Character Sketch. W. Schausiel. Op 9, No. 5.
Pretty theme, and a neat study in phrasing.

From Ancient Legends Springing—Song. E. Held.
An exquisite setting of Heine's poem. Will be appreciated by all good singers.

Schottische. L. Streabbog. Op. 288, No. 4.
Useful little study in phrasing and accent.

Short Service Prelude for the Organ, No. 6. W. H. Clarke.
For description, see Organ Department of this number.

Each number of THE MUSICIAN contains at least twenty-four pages of music, the average cost of which—in sheet form—is about $2.50. As it is our desire to include those compositions which will prove most useful, we solicit and hope to receive the opinions of our readers in reference to selections for future numbers.

***

In THE MUSICIAN for October will be found articles especially suited to the early stage of the season. Not only are there those of some length, but short, crisp and pointed suggestions are plentiful. "Patience and Persistence," by Marie Benedict, will help many students. "Right Things at Wrong Times," by Harvey Wickham, is a suggestive short article that will bear more than one reading. The Teachers' Forum is unusually practical, the article being inspired by an inquiry. "What Are You Worth," by Frank H. Tubbs, is particularly pointed and should open the eyes of those who are falling into ruts. Mr. Macdougall contributes an exposition of a plan used by him at Wellesley College, which may help others in like positions to enlarge the scope of their work. In addition to these, the many short paragraphs scattered through the pages are filled with seed thoughts.

***

New Publications. In the advertising pages of this issue we describe several new publications. All are valuable additions to our catalogue, and will be appreciated by teachers. You run no risk in ordering sample copies of any new publication, because we refund the money if it proves unsatisfactory.

***

The Musician's Premium List. This list, made up of musical works and articles needed by all musicians—students as well as teachers—offers some remarkable inducements. With but little effort, each of our subscribers can secure one or more new subscriptions, and we offer liberal premiums for any interest they may take in extending the circulation of this journal. The list, printed on the third cover page, will enable you to build up a library of choice musical works without the expenditure of any money.

***

If you are not satisfied with the way in which your orders have been filled by other dealers, why not give us a trial, and test our ability? Our facilities for promptly filling all orders are unequalled by any house in America. We carry a complete line of all foreign and American publications. We are large publishers—are rapidly building up a catalogue of sheet music and music books that cannot fail to interest teachers, because each subject has been selected on account of its teaching value.

***

Before deciding on your dealer for the present season's supplies, write for our new catalogues and best discounts. Compare the latter with those offered by others; note the liberal conditions under which we send selections of music "on sale"—see page 328. They will interest you. During the Summer months we prepared many new and excellent subjects, and our selections will contain a splendid variety of all grades. Write for further particulars. Glad to hear from you.

***

Readers of THE MUSICIAN who desire to keep posted upon all new publications of merit, should carefully read the advertising columns of THE MUSICIAN, from which they can secure much valuable information. Any of these publications can be procured through us at the least possible cost.

Attention is called to our Special Offer to send Music On Sale to Schools and Teachers. Full particulars will be found on page 328 of this issue. Our success in obtaining and holding the school and teacher trade is based upon the fact that in making selections we use only such music as will prove useful. We do not follow the plan, adopted by so many dealers, of taking the first assortment that comes to hand, regardless of the special needs of the customer. When you patronize us you can depend upon receiving music selected by experts, and selected with the special object of supplying just what is wanted. Only the latest and best publications are used in making these selections, insuring a nicely balanced and well contrasted supply. If you have never tested our ability in this line, *give us a trial.* So that we may have full particulars regarding the kind of music which will prove most useful, carefully fill out the blank application which will be found on page 328. At the same time give us an idea regarding the quantity desired—the value measured by retail prices. Attention to these details will enable us not only to supply the proper material, but also the approximate amount of music desired.

***

Manchester's Music Tablet. Designed to supply teachers and pupils with a convenient pad of ruled music paper, and containing practical suggestions to meet the every day needs of both, Manchester's is the best tablet that has ever been offered. Under the circumstances, it is not surprising that its sale is greater than the combined sale of all other tablets in the market. If you haven't seen Manchester's, send for a sample. It will please you and your pupils, too. Each tablet contains 100 leaves, ruled 12 staves to the page. Only 20 cents.

***

"Stray Fancies" and "Characteristic Sketches" are the latest additions to our series of Fifty Cent Books. The first is a splendid collection of second grade music; the second is a most entertaining and helpful collection of third grade music. Both are having a large and constantly increasing sale. We heartily commend them, because we know that they are worthy additions to this popular series.

***

"Sixty Progressive Exercises" for the Pianoforte, by J. Pischna, Edited by Anton Door. Our revised and annotated edition of these celebrated studies, which are used at Vienna, Berlin, St. Petersburg, Moscow and other well-known European conservatories, will be ready on the 23d of the present month, as per announcement on page 296. Attention is called to the Special Introductory Price on all orders received prior to October 31st.

***

How Many New Subscribers will You Send Us? Teachers say their best advertisement is their pupils. So a magazine will always pronounce its readers to be the most valuable medium for spreading its influence. Now, at the beginning of the new teaching year, is the time when our readers can demonstrate their belief in the value of THE MUSICIAN as an educational factor. The large percentage of renewals is an indication of the esteem in which its readers hold it, but they can do the magazine, themselves, and the large army of earnest students who are ever seeking additional help, incalculable good by securing new readers for it. It is not necessary to use space here in pointing out its value as an aid to teaching and study; our readers know it and are constantly writing us about it. We want them to tell others as well as the publishers. If you believe in THE MUSICIAN, tell your pupils and friends, build up its clientele and every advance made in the subscription list will be reflected to you in additional improvements in the journal.

***

Are You Certain that you are buying your music at as good rates of discount as your fellow teachers? If not, you are doing business at a *disadvantage. We claim* that the discounts we allow teachers are MUCH BETTER than offered by other dealers, and unless you have had our latest quotations, you *cannot* be sure that you are not paying *more* for your supplies. This applies not only to our own publications, but to ALL the music you use. On our own publications we offer such liberal discounts (which will be supplied on request) that, no matter how far distant you are, or the cost of Postage or Express, we GUARANTEE you a saving when purchasing from us. In this connection you should remember that we send liberal selections of the latest and most desirable music "ON SALE," with the privilege of returning and having credited, at the end of the teaching season, all that has not been sold or used. Full particulars regarding this department of our business may be had on request. We also offer numerous additional advantages which it is impossible to mention in the limited space of this page. *Write us!* No trouble to answer your letters and inquiries. It will pay you to correspond with a house that is progressive and up-to-date in all of its dealings. We can save you time, trouble and money. We suggest that you give us an opportunity to demonstrate this fact by sending us a trial order; it will surely bring us your steady patronage.

SOME THINGS OUR READERS SHOULD KNOW AND REMEMBER:

That We Handle and Supply Anything in Music.

That We Are Large Publishers of sheet music—vocal and instrumental—all of which are listed and fully described in our Catalogue—free to any address.

That We Publish many valuable books, in addition to the seventy-three numbers of the **"Hatch Edition,"** listed on page 2 of cover; all are fully described in our Catalogue.

That Our Publications Are Noted For Correctness and Beauty.

That We Carry a Complete Line of All Foreing and American Publications.

That We Supply all Music mentioned in the articles appearing in THE MUSICIAN; all music included in the lists of Desirable Choir Music; all publications mentioned in the advertising columns of THE MUSICIAN.

That we send liberal selections of the latest and most desirable music "ON SALE," with the privilege of returning and having credited, at the end of the teaching season, all which has not been sold or used.

That Our Facilities For Promptly Filling All Orders Are Unequalled.

That All Music is Supplied Teachers at More Liberal Discounts than those offered by any other house.

That You Should Have Our Catalogues and Professional Discounts, both of which will be sent upon request. They will interest you.

***

Attention is called to the Special Introductory Offers printed on page 293. These Albums, by Heins, Gänschels, Bohm and Behr, are well worth the full retail prices, hence it will pay to order them before the 31st of October.

***

If in need of a Metronome, one that will give entire satisfaction (all others are worthless) and last a lifetime, send your order to the Hatch Music Co. Owing to the increased cost of manufacturing Metronomes, prices have been advanced by nearly all dealers. We still offer them at the old prices—another proof of our claim that you save money by purchasing from us. We handle only the best makes, and guarantee every instrument for two years. All complaints receive careful attention and prompt adjustment. Our prices ($2.50 and $3.50) are very low, and we offer an extra discount on orders for six or more instruments.

***

The publishers of THE MUSICIAN have exceptional facilities for printing sheet music and music books. Upon receipt of manuscript, with full particulars concerning the style of publication desired, we will submit complete estimate.

***

THE MUSICIAN *wants to keep in close touch* with teachers and schools in all sections, and the editor believes that space devoted to reports of concerts, recitals, lectures on musical subjects and musical events of general interest would prove interesting to readers. You can aid him in making an interesting feature of this department by sending reports of musical happenings that will interest your fellow teachers in other localities.

***

Agents Wanted.—THE MUSICIAN wants good, live representatives to solicit subscriptions. Those having a knowledge of music preferred. Full particulars, including sample copies, order blanks, other helps and terms, will be sent to all who desire to make a trial of this work. No other field of subscription work offers such liberal inducements.

***

A Revised and Enlarged Edition
—OF THE—
NATIONAL GRADED COURSE.

While the editors of this Standard Graded Course have always been confident of its superiority, and confident that it has been, since the issue of the first edition, the best and most practical graded school—superior in every respect to any similar publication—they have periodically revised the work so as to keep it right up-to-date. Whenever a teacher suggests a change, the suggestion is given careful consideration, and if it will strengthen the work in any respect, it is very cheerfully accepted and adopted. Neither care nor expense has been spared to make it perfect.

During the summer, the editors revised the entire work, and the new editions of Grades I–IV are now ready. The new editions of Grades V–VII will follow shortly. We desire to call especial attention to the new edition of Grade I. In order to include additional valuable matter, and to make the progression perfectly smooth and natural, it was found necessary to enlarge this number, which now contains fifty-four pages. We believe that it is, in every respect, a *perfect* work—that it is the best elementary work published. It merits the careful consideration of every earnest teacher who is desirous of using the BEST.

We invite examination and critical comparison, and will cheerfully send Grade I, or the entire Course—seven grades—subject to approval. We are willing to assume all of the risk in order to have you test the merits of our claims, and of the Course.

THE BURROWES MUSICAL KINDERGARTEN METHOD

INSTRUCTION FOR TEACHERS BY HOME STUDY

The many Music Teachers who have signified their desire to acquire this charming method in time for their September Openings are advised as follows:

1. Orders should be sent in as soon as possible.
2. The new, improved and enlarged edition of the Teachers' Manual is ready for distribution.
3. It is well for teachers to familiarize themselves with the method early so that they can spread its fame during July and August, and try and get some newspaper notices. They will then be able to begin the autumn term with better prospects of great success.
4. Teachers may apply the Method to their summer classes, and thus obtain testimonials from parents, which will prove of great value in obtaining pupils for the autumn classes. Do not underestimate the value of an early beginning.

THE BURROWES METHOD was built up for children and from actual study of the needs, preferences, character, and even the whims of children. The authoress has taught a musical kindergarten for many years, during which she has composed songs, invented games, and constructed apparatus too numerous and varied to mention or describe; and of these only the most valuable have been retained. Everything that was dull, cumbersome, ineffective, or unchildlike has been abandoned, and what remains has been tested through and through, and its value proved beyond the shadow of a doubt. There is nothing in it that is not agreeable and entertaining. **IT IS NOT BUILT ON MERE THEORIES.** It is not the inspiration of a day. It is, on the contrary, the **CREAM OF FIVE YEARS OF SPECIAL EFFORT,** and the fruit of many other years of toil and study. The results speak for themselves.

MUSIC TEACHERS OF ALL GRADES should investigate this work. **ADVANCED TEACHERS** will profit largely by establishing kindergartens in charge of an assistant or partner, thus creating a preparatory department which will act as a feeder to the advanced classes. The advantages of the Method to **YOUNG TEACHERS** are obvious.

All Teachers who have not seen the Art Souvenir Booklet (mailed Free to Teachers) should send their addresses at once.

Modern Foundation Studies

—In—

Piano Playing

Graded for Beginners.

By W. F. SUDDS.

The great progress made in the art of piano playing during the past few years has, to a large extent, rendered older books of instruction obsolete. All good works contain the proper material, but its arrangement, and the method of presenting it to the immature musical mind, often leaves much to be desired. Improvement of these particular features—the arrangement and method—has been the guiding thought in the preparation of "Modern Foundation Studies."

It is a work for beginners, and matters of vital importance, such as formation of the hand, methods of touch and tone-production, are treated in detail. In addition to the comprehensive treatment of these subjects and numerous musical examples, exact positions and movement of the hands in the proper performance of the various touches are profusely illustrated. This feature will be appreciated by teachers.

The work contains foundation material on which the most elaborate superstructure may be safely built. The music has been selected with great care, to clearly illustrate the point under consideration in an attractive manner without wearying the student.

Paper Binding. Price, $1.00.

Published by the HATCH MUSIC COMPANY.

A Thoroughly Modern and Practical Exposition of the Subject.

MODERN STUDIES

In Phrasing and Interpretation.

By W. F. SUDDS.

It is now very generally admitted that a separation of the mental and physical features is the best plan for imparting instruction in the study of music. Both may be studied at one time, but it is a mistake to suppose that mental training is the result of physical effort.

To insure proper performance of a composition, the mental concept must be perfect. A pianist possessed of brilliant technic, acquired only by long and faithful practice, may mar a good work because of inability to interpret the author's ideas, just as one may recite the *words* of a poem without a proper appreciation of their meaning and without a correct grouping into phrases. To thoroughly enjoy a musical work one must be able to analyze it, and "Modern Studies in Phrasing and Interpretation" presents the means of doing this in a most comprehensive and intelligent form.

Want of space prevents a detailed description, but we shall be glad to send the work subject to approval, so that any one may test our assertion that this is a thoroughly modern and practical exposition of the subject.

Paper Binding. Price, $1.00.

Published by the HATCH MUSIC COMPANY.

FLETCHER MUSIC METHOD—SIMPLEX AND KINDERGARTEN

The following are a few of the many endorsers of the Method, and a partial list of the Conservatories in which it is taught:

DR. WILLIAM MASON, New York.

FONTLEROY HALL SCHOOL, Roxbury, Boston.
DURHAM CONSERVATORY, Durham, N. C.
DETROIT CONSERVATORY OF MUSIC, Detroit.

Original Kindergarten System In America and Europe

THE AIM OF THE FLETCHER METHOD

Is to reduce the difficulties which the study of music causes to children and to give a Fundamental, Systematic and Logical Musical Education in a way that shall be thorough, natural and pleasurable, and thus make it possible for Music to exercise her threefold power and to develop the child physically, mentally and artistically.

FLETCHER MUSICAL ASSOCIATION

In connection with this system, and for the benefit of its teachers, the Fletcher Musical Association has been formed. The object is to promote unity and strength of purpose among the teachers, and to keep every teacher in touch with all new and good ideas which bear on the teaching of music to children.

Fletcher Musical Association Bulletin

This is a paper edited three times a year for the benefit of the Fletcher music teachers.

Evelyn A. Fletcher-Copp, the originator of the Fletcher Music Method, spent five years studying music abroad and has since successfully introduced her system in London, Berlin, Leipsic, Brussels and Paris. Already the demand in these foreign centers is so great that Mrs. Fletcher-Copp has arranged to teach a Normal class every second year in London or Berlin. The advantages to teachers of being brought in touch with the latest European musical ideas which this regular recurring visit to Europe entails are obvious. Realizing the inadequacy of teaching by correspondence, and recognizing the great value of the system musically, Mrs. Fletcher-Copp continually refuses applications from those who desire to study by mail, and her certificate of authorization to teach her method can only be obtained by those who study with her personally.

My Dear Miss Fletcher:

Allow me to convey to you the unanimous delight and interest expressed by the teachers of the Synthetic Guild after your demonstration. Personally your talk and the exhibition of your appliances filled me not only with admiration but gratitude. In these days when little children are set at such a multiplicity of studies, and such unreasonable demands are so often made upon teachers, it is a relief to know that some one has found an incline plane by which Parnassus may be reached even by the little folks. It seems as if your kindergarten system were a sort of funnel through which true ideas may be carried into every intelligent method of either vocal or instrumental music, and as such all teachers must give you a hearty indorsement.

Yours very truly, KATE S. CHITTENDEN.
President of the Synthetic Guild.
President of the Metropolitan College of Music.
Vice-President and Dean of the Faculty of the American Institute of Applied Music.

A few of many letters received from world-renowned musicians:

New York, Jan. 1, 1900.

My Dear Miss Fletcher:

I was deeply impressed recently with the force and simplicity of your Method. * * * There can be no discussion of the value of your Method of work because the results are perfectly in evidence and cannot be disproven—they speak for themselves. With best wishes for your success in this country, I am

Sincerely yours, GERRIT SMITH,
Hon. Pres. American Guild of Organists.
Past Pres. Manuscript Society, New York.

Mr. William H. Cummings writes:

The Guildhall School of Music,
Victoria Embankment, E. C. (Near Blackfriars Bridge)
* * * It was evident that Miss Fletcher possessed an exceptional gift as a teacher, and that her system would very speedily enable young students to attain proficiency in all the essential knowledge which is indispensable to vocal and instrumental performers.

WILLIAM H. CUMMINGS, Principal.

June 1 1899.

In answer to your question regarding the Fletcher System, allow me to say that it has my strongest endorsement. Every school where a course of music is pursued should adopt this method.

Yours truly, ALBERT A. MACK,
Music Director at St. Mary's School, Raleigh, N. C.

I have taught the Fletcher Music Method now for about three years, with increasing satisfaction as to results. It has helped me wonderfully, not only directly with my junior pupils, but in broadening and deepening all my work, and solving many knotty problems of teaching. There is nothing one-sided about it, eye, ear, fingers, brain, memory, imagination, all are reached and made to contribute their share to the general musical culture. Further, it is a delight to the children, who learn easily, love their classes, and later on their practice, finding it no hardship, to the great surprise of their parents.

ROBERTA GEDDES-HARVEY, Mus. Bac.,
(Trin. College). Organist of St George's Church,
Guelph, Ont.

Dr. William Mason says:

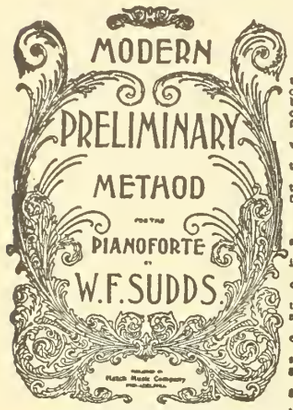
New York.

The Fletcher Method seems to me well adapted to the rapid and thorough accomplishment of of its purpose because of its tendency to immediately arrest attention, to arouse interest and thus to promote a habit of mental concentration on the part of young children. Games, sports and pastimes constitute a powerful force in our early education because, through their agency, knowledge is quickly inducted and woven into each personal experience. Miss Fletcher's method being based upon this principle, appears to me well adapted to the accomplishment of the desired result, and with ease to the pupil, because the sense of drudgery is minimized.

For further particulars address E. A. FLETCHER-COPP, Home Address, 99 Francis St., Brookline, Mass. New York Address, 1125 Madison Avenue.

Standard and Popular Books Published and For Sale by the Hatch Music Company.

MODERN PRELIMINARY METHOD
FOR THE PIANOFORTE



Embodying the Latest and Most Approved Systems Conducive to Rapid Progress and Artistic Interpretation

By W. F. SUDDS.

As its title implies, this Method is modern, contains the newest ideas and their practical application. The bulky and voluminous instruction book is a thing of the past. The Method of to-day deals with more subjects than its predecessors, but deals with them in a terse and effective manner. It recognizes the importance of practical exemplification of the principles involved, but wisely leaves the amplification of various points to future study.

Among the many excellent features of the Modern Preliminary Method, we direct attention to the following:

The Rudiments are very progressive and explained with such clearness that the pupil cannot fail to comprehend them.

The Various Touches are clearly set forth and are accompanied by illustrations, drawn and engraved expressly for this work, showing the movements of finger, hand and arm.

The Correct Principles of Touch and Technic are illustrated by examples.

The Scales are introduced in an effective manner.

Proper Use of the Pedals, a matter generally disregarded, is given particular attention.

The Explanation of the Minor Mode, another subject seldom touched upon in works of this character, is such that it can be readily understood.

Five-finger Exercises are judiciously used, but not in the usual enormous quantity that disgusts and discourages the pupil.

The Musical Illustrations attending the various principles are taken from the best composers, of whom short sketches are given. This introduces a desirable amount of musical history.

The aim is to teach and illustrate one thing at a time. By a judicious contrast of subjects, weariness is avoided.

Four Hand Pieces are introduced, not merely for recreation, but to promote steadiness and inspire confidence in the pupil. This plan has the approval of all great teachers.

A Copious and Carefully Compiled Pronouncing Dictionary—a matter of great importance to a work of this character—is included.

It is a Complete Preliminary Method—a work which cannot fail to interest both the practical teacher and the earnest student.

MODERN PRELIMINARY METHOD is the result of many years' experience as a teacher, by an editor who needs no introduction to the musical public. It is a book of 144 pages (10 x 13 inches), printed from entirely new plates on the best grade of music-book paper.

Half Cloth Binding. Price, $1.00.

KULLAK'S SEVEN OCTAVE STUDIES
From the School of Octave Playing. Op. 48, No. 2.

Revised and Annotated, with Introduction and Practical Directions for Study, by

WILLIAM H. SHERWOOD.

While numerous exercises for the practice of octaves have been presented to the musical world by virtuosi and masters, Kullak's is the only method or "School" of octave playing that has become a standard. But good as they are in their original form, it is remarkable how much the usefulness of these studies has been enhanced by Mr. Sherwood's revision and annotations. A broad foundation embodying the general principles involved and the method by which the end may be most satisfactorily attained is laid in his Preliminary Remarks; instructions and suggestions for technical preparation are given in his "Notes on the Studies;" each study is *treated in detail*. Each movement of the hand and arm is designated by an ingenious device and these characters, elaborately used throughout the text, show the student *exactly* how the hand should approach and leave the keyboard in performing various passages. The progressive teacher will appreciate the importance of Mr. Sherwood's editorial work, and especially so since he gives, for the first time, his system of of instruction in octave playing.

Regardless of the great expense involved in the preparation of this edition, the price is the same as that charged for the ordinary reprint.

Paper Binding. Price, $1.25.

Classic Piano Solos for Young People
VOLS. 1-2.

ELEGANT COLLECTIONS BY WELL-KNOWN WRITERS.

Classics selected for the young are frequently of the dryest character and students are too apt to absorb the idea that good music *must be dull*. In the preparation of these collections the requirements of the youthful mind were kept in view, and the selection of works will prove that music of an advanced standard can be pleasing as well as useful in the formation of a correct and pure musical taste. These works are unequalled by any similar publications of corresponding grade. A critical comparison will establish our claims of superiority.

Paper, with Cloth Back. Price, $1.00 Each. Half Cloth. Price, $1.25 Each.

CLASSIC PIANO SOLOS
VOLS. 1-2.

Superb Collections by Eminent Authors.

While the contents of Volume 1 is largely made up of the works of the older masters, with but few exceptions the pieces included in Volume 2 are the works of the more modern classical writers, many of whom are still living. All of the compositions of both volumes are within the capabilities of the ordinarily good performer and will be found most interesting whether used for purposes of recreation or instruction. We ask a critical examination and comparison with works of similar character.

Paper, with Cloth Back. Price, $1.00 Each. Half Cloth. Price, $1.25 Each.

BUSSLER'S PRACTICAL HARMONY
Newly Revised and Corrected Edition

Authorized Translation from the Third German Edition by N. GANS.

Without exception, the best and most practical work on this subject ever published. The author is a noted German theorist, whose works are known, used and held in high esteem at all the most prominent European colleges and conservatories. The demand for PRACTICAL HARMONY has been so great that three revised editions have been printed in Germany. Ours was translated from the third German edition, by a writer selected by the author. It is, as its title indicates, a thoroughly practical work, embracing the latest and most approved methods. It is simple, is illustrated by practical examples, and is eminently suited for a self-instructor. Its price brings it within the reach of all.

For class instruction or for self instruction, Bussler's Practical Harmony is unequalled. It makes the study of harmony easy, rapid and entertaining.

Cloth Binding. Price, $1.00.

DICTIONARY OF MUSICAL TERMS

100 Pages. By STAINER and BARRETT. 6 x 9 Ins.

Compressed from the Imperial 8vo Edition, by K. M. ROSS.

We take pleasure in presenting a compressed edition of Stainer and Barrett's valuable work. Mr. K. M. Ross, in his preface, says: "In reducing this book from the author's larger work, we have endeavored to omit only such terms as are not in general use, but have been compelled to eliminate an amount of details, in order to keep within reasonable limits. To the general public it is hoped that this edition will be found of practical utility."

"Dictionary of Musical Terms" is a neat and attractive book. It is offered at a nominal price with the hope that it may prove of incalculable value to those in need of a handy reference book.

Paper Binding. Price, 25 Cents.

BURROWES' PIANOFORTE PRIMER
Latest Improved Edition

Revised and Modernized by THOS. A'BECKET.

The fundamental principles which have given the work a world-wide reputation were not disturbed in the revision, but as the method of instruction has improved more rapidly than any other portion of the musical art, the sole aim of the editor was directed to bringing it up to the requirements of a progressive age.

There are other editions of this work—a number of them—but none are equal to the Latest Improved Edition, although all are sold at the same price.

Half Cloth Binding. Price, 25 Cents.

JOUSSE'S MUSICAL CATECHISM
Latest Improved Edition

Revised and Modernized by THOS. A'BECKET.

No one questions the merit of Jousse's Catechism—it is a universal favorite; but the progressive teacher demands text books and studies of the most advanced character. He is not satisfied with original editions, but wants the latest and best ideas. The possession of up-to-date editions saves time and insures more rapid and more substantial progress.

There are other editions of this work—a number of them—but none are equal to the Latest Improved Edition, although all are sold at the same price.

Paper Binding. Price, 20 Cents. Half Cloth Binding. Price, 30 Cents.

THE HARMONIZING OF MELODIES
A Text Book for Students and Teachers

By HENRY C. BANISTER.

The harmonizing of melodies, generally termed the knowledge of harmony, is one of the most practical applications of the knowledge of chords and their treatment. One may know the meaning of a number of words and still be unable to construct a sentence; he who lacks the ability to use chords in harmonizing a melody is in a similar position.

"Harmonizing of Melodies" will prove a most helpful aid to the student of harmony. It is extremely practical and abounds in examples which will readily be understood. No point has been overlooked, and all important subjects are treated at considerable length. Various methods of handling the same melody are shown, and valuable information as to the best choice, with reasons for the selection, are given. Many excellent hints as to taste and ornamentation, culled from the experience of the writer, are included.

Paper Binding Price, 50 Cents.

WICHTL'S YOUNG VIOLINIST

A new and magnificent edition of Wichtl's celebrated violin school, including the original 100 progressive exercises in the first position, through all intervals and keys, with a second violin part for the teacher, to which we have added "Pleyel's Celebrated Duets for Two Violins"—carefully fingered and bowed—and a splendid collection of Popular Duets for Violin and Piano.

Without exception ours is the best edition of this standard work. Compare it with others.

Half Cloth Binding. Price, $1.25.

Thirty Standard and Popular Operas
ARRANGED FOR VIOLIN AND PIANO

Violin and Piano, 200 Pages. By A. S. BOWMAN. **Violin, 64 Pages.**

In this superb collection the compiler has displayed taste of the most eclectic character, his selections comprising the various "schools" of music—French, German, Italian and English. In one compact volume, grand opera, opera *comique* and opera *bouffe* have contributed their choicest melodies. The list includes the great operatic successes of a generation ago and passes, in continuous order, to those of the present day; we have Rossini, Donizetti, Verdi, Wagner, Bizet and Mascagni, in close relation. In the arrangement that happy medium has been reached which presents just enough difficulty to interest the player without proving troublesome or overtaxing the powers of the average performer. Without exception, it is the most useful and entertaining work of its character in print.

"Thirty Standard and Popular Operas," for Violin and Piano, is a handsome volume of 200 pages, bound in half cloth. The same, for Violin, contains 64 pages and is neatly bound in paper. Both are printed from new plates, on a fine quality of music-book paper. No expense has been spared to make them perfect in every respect.

Violin and Piano, One Volume, Half Cloth Binding. Price, $1.25. Violin Alone, Paper Binding. Price, 75 Cents. Both Books, if ordered at the same time, $1.50.

POPULAR SELECTIONS FOR MANDOLIN AND PIANO

By JOHN J. EBERHARDT.

Mr. Eberhardt, well known as a composer and arranger of music for the mandolin, and for mandolin clubs, is also leader of one of the most popular clubs in the United States. We have, therefore, no hesitation in recommending anything that he may offer in this particular line.

"Popular Selections" is a large book (9½ x 12 inches) of 128 pages, printed from engraved plates, on fine quality toned music-book paper; it has an attractive cover.

Paper Binding. Price, 50 Cents. If Sent by Mail, 11 Cents Additional.

Sieber's 36 Elementary Vocalises
Op. 92-97 Inclusive

FOR SOPRANO, MEZZO SOPRANO, ALTO, TENOR, BARITONE AND BASS

With Introductory Notes by FREDERIC W. ROOT.

Sieber's 36 Eight Measure Vocalises, for all voices, are well known and appreciated by teachers. The composer had a double object in view and prepared them for use in the school, as well as for self-study at home. The book for each voice differs from the companion volumes, as the exercises were written with especial regard for the voice part under consideration. Each study is contained within eight bars—therefore do not become tedious—and are written with the *sol fa* syllables, also with an ingenious and effective set of vowel sounds designed by the composer, who is a teacher of European celebrity. All of his studies are melodious and interesting.

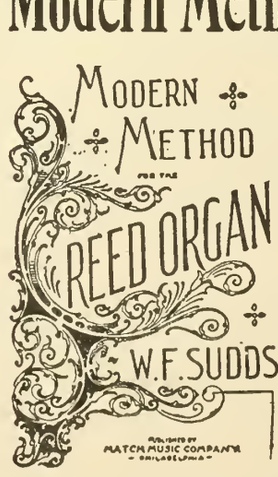
Our new edition is, in every respect, the finest in print. These studies have, heretofore, been published only in sheet music form, at $1 50 each. While our new edition is of much more convenient size and much handsomer in every way, it is sold for 50 cents per copy.

Mr. Frederic W. Root says: "The new edition of Sieber's Exercises are beautifully gotten out and I hope will be properly appreciated. I congratulate you upon the edition and hope to use it in my teaching for many a year."

Paper Binding. Price, 50c. Each.

Send to Hatch Music Company for Anything Needed in Music.

Modern Method for the Reed Organ



Embracing the Latest and Most Approved Systems Conducive to Rapid Progress and Artistic Interpretation; also Containing Various New and Important Features, such as Registration, Stop Nomenclature, Adaptation of Piano Music, etc., etc., Not to be Found in Any Other Work of the Kind

By W. F. SUDDS.

As the title implies, this method is modern, the newest ideas, and their practical application, governing its compilation. It treats all subjects in a terse and effective manner.

Among the many excellent features of the MODERN METHOD, we direct attention to the following:

It begins with Dictated Lessons.

The Rudiments are explained with remarkable clearness.

It is Carefully Graded.

It is sure to Awaken the Musical Instincts of the pupil without smothering the soul with too much drudgery.

The Fingering is the so-called Foreign, thus according with all the better class of modern musical publications for either Organ or Piano.

It contains a complete treatise on registration as applied to the modern Reed Organ; also full information and comparison in the matter of Stop Nomenclature.

It is the only work of the kind treating the subject of Adapting Piano Music to the Reed Organ.

Every variety of Touch is clearly set forth, accompanied by illustrations (drawn and engraved expressly for this work), showing the movements of finger, hand and arm.

The Scales are introduced in an effective manner.

The Explanation of the Minor Mode, another subject seldom touched upon in works of this character, is such that it can be readily understood.

The Musical Illustrations attending the various principles are taken from the best composers, of whom short sketches are given. This introduces a desirable amount of musical history.

The aim is to teach and illustrate one thing at a time. By a judious contrast of subjects, weariness is avoided.

Four Hand Pieces are introduced, not merely for recreation, but to promote steadiness and inspire confidence in the pupil. This plan has the approval of all great teachers.

A Copious and Carefully Compiled Pronouncing Dictionary—a matter of great importance to a work of this character—is included.

It is a work which cannot fail to interest both the practical teacher and the earnest pupil.

MODERN METHOD is the result of many years' experience as a teacher, by an editor who needs no introduction to the musical public. It is a book of 144 pages (10 x 13 inches), printed from entirely new plates and on the best grade of music-book paper.

Half Cloth Binding. Price, $1.00.

The "Hatch Edition"

Diminished reproduction of cover plate used on the "Hatch Edition."

All numbers included in this list have been carefully edited and annotated by leading American teachers, our corps of editors including: W. S. B. Mathews, Wm. H. Sherwood, Frank H. Tubbs, Frederic W. Root, R. S. Goldbeck, Jaroslaw de Zielinski, J. S. Van Cleve, Thos. a'Becket, Wilson G. Smith, H. C. Macdougall, Bernhard Listemann, etc. This important work has never been attempted by any other publisher. The engraving, paper, printing and binding are superior in every respect—each the best of its class. Regardless of the additional expense involved in the publication of annotated editions, prices have not been advanced, but are the same as those charged for ordinary reprints of the works included in this list.

VOICE.

No. 48. ABT. Op. 474. Practical Singing Tutor. For Soprano or Tenor. Complete 1 50

Good players will enjoy this exhilerating and interesting study

Wolff. B. Op. 105, No. 6. Dreamland. Romance. Grade III, ... 25
A poem in tone, and an interesting study. Revised and fingered by Thos. a'Becket

Zilcher, P. Op. 16, No. 1. Humoresque. Grade III, ... 25
Brilliant, powerful and quaint scherzo.

A Special Offer to Schools and Teachers Only.

MUSIC ON SALE

Our Plan: We offer to send, any time during the teaching season, a selection of Sheet Music, Studies, etc., etc., all of which may be retained until the end of the teaching season—until June, 1902—when payment is to be made for the music that has been used or sold, and all that has not been used or sold may be returned and credited. Various terms are applied to this method of doing business. We employ the term—ON SALE—to cover our plan.

[In order to avoid any misunderstanding, it may be well to state that while *On Sale Accounts* need not be settled, either by cash or by cash and returns, as noted above, until the close of the teaching season, *Regular Accounts* (those made up of items for music, books, etc., specially ordered) are due and payable monthly. Music specially ordered is not returnable.]

Its Advantages: While our plan of sending music ON SALE may offer the greatest inducements to those located in smaller cities, and in towns and villages where there are no large and complete stocks of music, it nevertheless offers advantages to those who reside in the largest cities. The possession of an up-to-date assortment of teaching material insures a supply of music suitable for all purposes and for pupils of all grades; avoids the necessity of hurriedly ordering music; makes one independent of delays in mail and express deliveries; enables one to become intimately acquainted with the latest issues—an important consideration for all who wish to keep fully posted—and puts the teacher who resides at some distance from a complete stock of standard music on an equal footing with fellow-teachers more fortunately located.

Selecting Music: Teachers may make their own selections from our catalogue, which will be mailed upon application, or upon receipt of the blank, printed below, properly filled out, we will make such selection as will, in our opinion, give a complete supply of most useful material. As a rule, the latter plan will be found more satisfactory. The best descriptive catalogues fail to give all of the information needed to make suitable selections. Catalogues are complete only when issued, and it is impossible to keep them up-to-date. Selections made by us will include our latest and best publications. Our experience in selecting music designed to cover all requirements gives us advantages possessed by comparatively few teachers. We make up more than 90 per cent. of all selections sent ON SALE, and the instances are rare, indeed, when they fail to give entire satisfaction. Our interests lie in sending music that can be used and sold. If we make poor selections, we have our work and trouble for nothing; if we make satisfactory selections, we are assured of payment for a considerable portion, or for all of the shipment; also of good will and future patronage.

Give Full Particulars: Teachers can materially aid us in making judicious and satisfactory selections by giving full information upon the following points: 1st, the approximate number of pupils to be supplied; 2d, the grades of difficulty (we grade all music from 1, very easy, to 7, difficult); 3d, the style or character of music desired; 4th, the kind of studies needed. If vocal music, name the voice; if organ music, let us know whether the music is wanted for pipe or reed organ.

[No matter *how often* ON SALE music is ordered, always give the information noted above. Instructions given with the first, will not answer for subsequent orders. On account of the variety and extent of our mail business, it is impossible to remember each individual case. Explicit instructions with each order will enable us to fill it in a prompt and satisfactory manner.]

Returns and Exchange: The original selection may be retained until the end of the teaching year, as noted above, or any portion that has not been used or sold may be returned any time during the year, at the option of the customer, and exchanged for another selection; we will add, at any time, such additional music as may be desired—all to be included in the final settlement.

Our Publications are noted for correctness and beauty, and as each subject has been selected because it possessed some special teaching merit, the entire catalogue is exceptionally useful. The value of our editions has been greatly enhanced by careful editing. Among the leading teachers of this country who do our editorial work, we mention the following: William Mason, William H. Sherwood, W. S. B. Mathews, Albert Ross Parsons, S. B. Mills, Emil Liebling, Robert S. Goldbeck, Richard Hoffman, Wilson G. Smith, Constantin von Sternberg, Bernhard Boekelman, Jaroslaw de Zielinski, J. S. Van Cleve, E. R. Kroeger, Thos. a'Becket, Homer N. Bartlett, H. C. Macdougall.

Our Discounts: All ON SALE music is billed at regular cash discounts.

New Accounts: We solicit and open accounts with all responsible parties. Those with whom we have no accounts are requested to send references with first order. As references we prefer music dealers, but do not insist upon having them.

No Risk: *As payment is to be made only for music that is used or sold, acceptance of our offer to send a selection ON SALE involves no obligation to purchase.*

The blank printed below will, if properly filled out, give all the information needed to enable us to make up a selection that will please. Our publications are superior in every respect, and our discounts are more liberal than those offered by any other house. ANY OTHER INFORMATION DESIRED WILL BE CHEERFULLY FURNISHED.

HATCH MUSIC COMPANY, = PHILADELPHIA, PA.

Detach this blank and fill out carefully.

Hatch Music Company,
Eighth and Locust Streets,
Philadelphia, Pa.

GENTLEMEN:

Upon the conditions named in your "Special Offer to Schools and Teachers Only," you may send me a selection of music—ON SALE.

It is understood that this music is to be sent upon the following conditions:

1. That it may be retained until the end of the teaching season—until June, 1902—at which time I agree to return all music which has not been used or sold, and remit for the balance.
2. **That I will not return any music which has been used, marked or soiled.**
3. **That I will pay all transportation charges.**
4. **That no music specially ordered by me is to be included in my return of ON SALE music.**

(By filling out the blank spaces below, you will give all the information needed to enable us make a selection that will please you.)

Approximate Number of Pupils to be Supplied

Piano ..... *Voice* ..... *Reed Organ* ..... *Pipe Organ* .....
(Name the Voices.)

WITH
Practical Suggestions
TO
Students of Music.

Is Entirely New and Superior to Anything of Similar Character That Has Ever Been Offered.

The Tablet is 6⅞ x 10⅜ Ins.

It contains 100 Sheets—each with 12 staves. The paper is first-class—suitable for writing with either pen or pencil. The leaves are perforated so that they can readily be removed. Second page of cover contains, for ready reference, the following: Notation, Display of Tetrachords, Cycle of Keys, Condensed History of the Minor Scale, Relationship of the Minor Scale. Manchester's is so much superior to all other tablets, that an examination will insure its use.

Price, 20 Cents.

By Mail, 28 Cents.

Liberal discount when ordered in quantities.

Guide to Practical Musicianship

For Students of Piano, Organ or Violin.

By A. J. GOODRICH.

In his new system, the author does away with the old and slavish process of rote memorizing, *i. e.*, playing notes and repeating them until memorized, without attempting to master the composer's design; and he illustrates the means by which intelligent students may, in a comparatively short time, master any composition that does not present technical difficulties beyond their conception.

The results are three-fold: (1) A great economy of time; (2) An intelligent understanding of compositions; (3) An improved memory.

Professional musicians, practical teachers, amateur musicians and students of music have long felt the need of some improved method that would reduce the time required to memorize a composition, and Mr. Goodrich presents a method that he subjected to a thorough and exhaustive test, with eminently satisfactory results, before putting his ideas in shape for publication. It is the author's firm belief that, by its aid, compositions may be mastered in from one-quarter to one-half the time required by old systems.

Every musician needs a copy of "Goodrich's Guide to Practical Musicianship."

Paper Binding. Price, $1.00.

THE MUSICIAN PREMIUM LIST.

From its inception in 1896, THE MUSICIAN has been the exponent of a well-defined educational policy which has for its foundation comprehensive musicianship. On this foundation it has built up its remarkably successful record as an educational music journal. Its steady adherence to its mission of aiding teachers and students has been commended by the best authorities in this and other countries, and for the future it proposes the establishment of a yet closer relationship with teachers and students of all grades.

It pays to introduce THE MUSICIAN, and it's an easy matter to obtain subscriptions for the BEST journal of its class. During the year 1900 THE MUSICIAN contained 816 pages of music and musical literature, exclusive of illustrated supplements.

The Premiums named in the list printed below, *apply only to subscribers*; and as they are offered for the purpose of increasing our list of subscribers, *they apply only to NEW subscriptions.*

PREMIUM CONDITIONS.

1. Premiums are given only to those who are already subscribers. Any subscriber is entitled to receive a premium for each NEW subscription sent us.

2. Premiums are not given for less than a full year's subscription; neither do they apply to renewals or transfers.

3. Any combination of the Premiums named in this list will be allowed.

4. Premiums may be ordered when subscriptions are sent us, or the selection of Premiums may be deferred until the list is complete.

NOTE: Unless otherwise specified, all premiums will be sent by mail, postpaid, or by express, at our expense.

CASH PREMIUMS.

(Other Premiums are not given when cash deductions are allowed.)

Two Subscriptions	($1.35 each)	$2.70.
Three "	(1.30 each)	3.90.
Four "	(1.25 each)	5.00.
Five "	(1.20 each)	6.00.
Eight "	(1.15 each)	9.20.
Ten "	(1.10 each)	11.00.

OTHER PREMIUMS.

FOR ONE SUBSCRIPTION.

Any one of the premiums included in this list will be sent to the subscriber who sends One NEW subscription, accompanied by $1.50.

Sheet Music—selection to be made from our Catalogue—amounting to $2.00 at retail prices.

N. H. Allen
Chas. Davis Carter
W. B. Colson, Jr.
Henry G. Hanchett
Benj. L. Whelpley
Harrison M. Wild
Herve D. Wilkins
Arthur L. Manchester

GRADE 1.

The Corner Stone of the Course.

Table Exercises; Instructions from the Very Beginning, Most Carefully Graded; Difficulties Introduced in Logical Order; Interesting Exercises and Etudes; No Octaves; Exercises for Free Wrist; Major Scales—*Written*, but *not* Played.

GRADE 2.

Introduction of Scale Playing: Exercises for Passing Under the Thumb; Minor Scales Written; Beginning of Arpeggio Work (Broken Chords); Major and Minor Chords Awakening of the Ideal of the Singing Touch; Interesting Etudes; Careful Grading of Difficulties.

The Preparatory Gymnastic Exercises, in Grade 1, are Practical and Helpful.

GRADE 3.

Velocity Assumes Some Importance; Attention Given to the Staccato, while Cantabile Playing Is Carried Aloug with Equal Care; Etudes Become More Like Pieces; Polyphonic Playing Introduced; Exercises for Weak Fingers in Each Hand.

GRADE 4.

Polyphonic Playing Carried Forward; Rhythmical Problems (Two Against Three) Introduced; Greater Richness in the Etudes; Etudes for Melody Playing, Rapid Runs, Trills, Arpeggi, Marked Rhythms, Extreme Agility, Fourth and Fifth Fingers Interest Maintained Throughout the Grade.

GRADE 5.

Musical Material of Great Beauty; Etudes for Left Hand, Octaves. Polyphonic Playing, Staccato, Double Notes, Grand Arpeggi, Fourth and Fifth Fingers. In Singing Tone, Touch, Velocity and General Intelligence, Much More is Demanded of the Pupil.

GRADE 6.

Etudes for Extended Finger Touches, Staccato, Doubl Notes, Extreme Rapidity in Staccato and Runs; More Attention Given to Octaves; Pupil's Task Steadily Increasing in Difficulty—Greater Requirements in Regard to Touch, Interpretation, Color and Phrasing.

GRADE 7.

Pieces and Etudes by Saint-Saëns, Henselt, Kullak, Chopin, Mendelssohn, Raff, Alkan and others. These, Making Greater Demands upon the Pupil, advance his Technical Skill to the Highest Efficiency and Insure Ability to Interpret the Greatest Works for the Piano.

Several Opinions

WILLIAM H. SHERWOOD: I a happy to state that the "Nation Graded Course" is remarkab adapted to the needs of teache and students of music. Your clai in regard to the excellent gradi of the studies is a thoroughly ju one. I do not think that I ha ever seen as good a succession topics and exercises arranged they are from the beginning o using the best kind of materia from all sources and without a superfluous pages.

WILSON G. SMITH: I have bee particularly impressed with th practical value and uniform exce lence of the "National Grade Course."

AD. M. FOERSTER: The "N tional Graded Course" is destine to hold a foremost position amor the works of its class. I do n know of a better work, one co taining a more interesting an valuable selection of studies an pieces for the various peculiarit to be mastered. A list of desirab pieces that may be added to eac part, if found necessary, is give in each grade, also definitions all musical terms used in th work. The work is bound to fin favor with thoughtful teache and students.

O. R. SKINNER: I like th "National Graded Course" muc better than any other work I a familiar with. The editing seem to be thoroughly well done, an the print leaves nothing to t desired.

(Want of space alone preven printing the opinions of hundrec of well-known teachers in all se tions of the United States an Canada.)

It Will Help YOU in Your Teaching.

Because

- It embodies the work of the most eminent pianists and teachers in America.
- It can be readily adapted to your "method," no matter what that may be.
- It is the LATEST work of the kind.
- ALL of the studies are carefully annotated, fingered and edited.
- It is the most carefully graded of any course before the public.
- It begins at the beginning of study.
- It saves the time that otherwise would be spent in laborious and often unrewarded search after that which is good and up-to-date.
- It covers the entire field of piano literature in an eminently practical, interesting and stimulating manner.
- Hundreds of your fellow teachers from all parts of the country have sent us, unsolicited, enthusiastic commendations of these very features.

This complete work (7 grades) together with a specially prepared pamphlet entitled: "Hints for Obtaining the Best Results in Using the National Graded Course." will be sent upon request, subject to examination and approval—without any obligation to purchase.

Guide to Practical Musicianship

For Students of Piano, Organ or Violin.

By A. J. GOODRICH.

In his new system, the author does away with the old and slavish process of rote memorizing, i. e., playing notes and repeating them until memorized, without attempting to master the composer's design; and he illustrates the means by which intelligent students may, in a comparatively short time master any composition that does not present technical difficulties beyond their conception.

The results are three-fold: (1) A great economy of time. (2) An intelligent understanding of compositions, (3) An improved memory.

Professional musicians, practical teachers, amateur musicians and students of music have long felt the need of some improved method that would reduce the time required to memorize and comprehend music, and Mr. Goodrich presents a method that brings such results, before putting his ideas in shape for publication, to a thorough and exhaustive test, with eminent success. It is the author's firm belief that, by its aid, compositions may be mastered in from one-quarter to one-half the time required by old systems.

Every musician needs a copy of "Goodrich's Guide to Practical Musicianship."

Paper Binding. Price, $1.00.

In Press. Will Be Ready Nov. 20th

Owing to a combination of circumstances, including a strike of lithograph printers the completion and publi cation of these books has been delayed, and they will not be ready until the 20th of the present month. We therefore extend our

Hatch Edition. No. 74.

Heins Album for the Pianoforte

An interesting group of compositions of about the third grade, selected and combined with a view of affording both instruction and amusement. Heins is celebrated for melodious themes, and for their brilliant and showy treatment. He possesses striking originality, and successfully handles all varieties of subjects and styles—grave or gay, brilliant or sedate. On account of their brilliancy, and because they lay well under the hand, many of his works are favorite as solos for commencements and public entertainments. Young performers will appreciate the latter quality, which insures confidence in the ability to produce satisfactory results. The selections contained in this ALBUM include many of the best examples of the author's art and they have been chosen with a view of furnishing pleasing contrasts.

CONTENTS.

At West Point. Op. 184.
Coquette (The) (Die Zierliche.) Op. 92.
Cuckoo (The) Clock. (Die Schwarzwälder Uhr.) Op. 224.

Maiden's (A) Dream. (Mädchentraum.) Op. 176.

Paper Binding. Price, 50 Cents.

Hatch Edition. No. 75.

Gänschals Album for the Pianoforte

Any collection of musical compositions of this character should contain the author's best works, but it is none the less important, in order to avoid monotony, that the selections shall present strong contrasts. In the compilation of this Album, the editor has exercised extreme care and splendid judgment. Among others, attention is directed to the grace note studies studies of arpeggios, studies of octaves—broken or otherwise—etc. And there is a similar generous variety of style, a graceful gavotte being close neighbor to a barcarolle, a polka rondo to a descriptive or imitative sketch. Altogether it is a splendid collection, one that cannot fail to please students as well as those in search of pleasing music for recreation and amusement. Each composition has been revised and carefully fingered,

CONTENTS.

By the Forest Lake. (Am Waldsee.) Op. 229.
By the Mill Stream. (Am Mühlenbach.) Op. 222.
Chimes (The). (Glöckchenspiel.) Op. 221.

Heart Love. (Herzlieb.) Op. 27.
In the Mill. (In der Mühle.) Op. 239.
Mountain Bells. (Bergglöckchen.) Op. 236.
My Love Star. (Mein Liebesstern.) Op. 237.

Paper Binding. Price, 50 Cents.

Hatch Edition. No. 76.

Bohm Album for the Pianoforte.

The ALBUM covers the great breadth and range of his works, presents them in several grades of difficulty, and illustrates his various moods. Not only as a means of recreation will this work prove interesting; it will be found valuable for the purpose of study, for at his best Bohm needs study if his compositions are to be well played. It is the editor's belief that players of all grades will find this ALBUM both useful and enjoyable.

CONTENTS.

Blue Bells. (Blau Veigelein.) Op. 327, No. 20.
Fadette. Op. 327, No. 45.

Will You Lend Me Your Heart? Op. 266.
With Resounding Song. (Mit Sang und Klang.) Op. 153.

Paper Binding. Price, 50 Cents.

Hatch Edition. No. 77.

Behr Album for the Pianoforte

A glance at the contents will show the wide range of subjects covered. All are treated in a manner that prove both interesting and valuable to the student. The collection presents contrasts in style and rhythm—the blithe rondo, the sentimental romance, the bright military sketch and the slow dance of Grandpa are intermingled. Contains material to please all tastes, and prove a valuable aid to the teacher. None of the compositions are above the second grade.

CONTENTS.

SCRIBNER'S LATEST MUSICAL BOOKS

STUDIES IN MUSIC

By various authors. Edited by ROBIN GRAY, editor of "The Musician" (of London), with frontispiece portrait of JOHANNES BRAHMS.

8vo. Gilt Top, $2.50 net.

A collection of well-written essays by leading contemporary musical critics. The subjects cover a very wide range, considerable space being given to the music of the present day. Among the composers discussed are Brahms, Cesar Franck, Weber, J. S. Bach, Purcell, etc. There are several chapters on Wagner and his music, and interesting papers on special subjects, such as "The Libretto of the Future," "Music and Race," "The Art of Pantomime Ballet," etc. The authors include English, French, German, Austrian, and Italian musical writers, all of the first rank in their profession.

THE LEGENDS OF THE WAGNER DRAMA

Studies in Mythology and Romance. By JESSIE L. WESTON. New and Cheaper Edition.

12mo. $1.75.

The only work in English from which the student of Wagner's art, the theatre-goer, or the general reader interested in mediæval romance can obtain accurate information respecting the legends upon which Wagner based his musical dramas, their origin, mythical significance, development in mediæval literature, and the manner in which Wagner reshaped and reanimated them.

A SELECTED LIST OF THIRD GRADE MUSIC AND BOOKS

SHEET MUSIC.

BEAUMONT, P.

Slumber Sweetly. Cradle Song 40
An exceptionally valuable teaching piece. Its difficulty lies in the technical requirements necessary to keep the cradle song idea prominent. Beautiful.

BEHR, F.

Butterfly and Flower (Papillon et Fleur). Caprice 40
Characteristic piece, containing excellent, albeit not too difficult, work for both hands. Very melodious.

BENDEL, G.

Op. 108. Dream and Awakening (Traum und Erwachen) 40
Characteristic piece in which the first subject is given out by 1st and 2d fingers as the lower note of the chords. Excellent practice, and pleasing as well.

BLON, F. von.

Chat in the Spinning Room (Plauderei in der Spinnstube) 40
The chatting is done by the right hand, while the left develops the spinning effect. Effective and interesting.

BLUM, O. R.

Dancing Sprites 35
Graceful and melodious composition, presenting no particular difficulties, but certain to please the pupil.

BOHM, C.

Op. 265. Bright Green Fields (Frisches Grün) . 35
The music is as bright and pleasant as the fields. Good study in passage work and phrasing.

Op. 284. Dance of the Gnomes 35
An excellent teaching piece, full of melody and grace. Well worth using; easy but brilliant.

Op. 327, No. 45. Fadette. Impromptu Brilllante 50
Interesting as a teaching piece and attractive as a salon number. It requires a dainty touch.

CHAMINADE, C.

Op. 9, No. 1. Pièce Romantique. Nocturne . 25
Splendid composition. Thoroughly characteristic of this composer. The melody, in left hand, should have broad singing tone quality, with accompanying chords soft but not staccato.

COOPER, W.

Op. 55 Snow Flakes (Schneeflocken). Sketch 40
Descriptive piece in which the whirling snow flakes are prettily suggested. Requires a light touch and fluent delivery.

DEVRIENT, F.

Op. 46 Welcome to Spring (Voilà la Printemps). Waltz 50
A "taking" waltz and a good teaching piece. It has the freshness of the budding days of spring.

D'ORSO, F.

Op. 47. Dream of the Angel (Rêve d'un Ange). Nocturne 40
Evidently this angel had pleasant dreams. The music is melodious and shows no trace of care. Good wrist study.

Op. 46. Dream of the Ball (Après le Bal). Valse Rêveuse 40
A short but attractive introduction leads to a waltz of dainty and dreamlike beauty.

DURAND, A.

Op. 91. Fifth Valse 50
A well-known composition, and one of the best of its class. Good for recital use.

EHRLICH, G.

Op. 5. Barcarolle 40
Well written, interesting in its working out and thoroughly melodious and musical. Affords opportunity for excellent playing.

EILENBERG, R.

Op. 115. Water Fairies' Spell (Nixenzauber). Salon Piece 50
Good study in passage work which has the merit of being attractive musically.

ENGELMANN, H.

Op. 356. Dance of the Snowflakes. Polka Caprice 50
The rhythm depicts the capricious whirling of the flakes as they fall. Good study and brilliant. Requires light hands.

Op. 415. Golden Road. Reverie 35
An attractive piece in the well-known reverie style. Good practice in octaves and chord playing.

Op. 370. Whirling Dervish. Tarantella . . . 50
Like these oriental fanatics, this piece certainly whirls. Splendid exercise in velocity. Plenty of time to it, too.

ESPEN, T.

Op. 35. Elder Blossoms (Flieder Blüthen) . . 35
These blossoms sway to the breezes with careless grace. The piece is not hard, but when well played is very pleasing.

FISCHER, L. H.

Op. 14. Dragon Fly (Libellenspiel) 50
Requires nice playing. Good study in finger work and light arm. Fully annotated.

FISCHER, O.

Op. 204. Flower of My Heart (Herzblümchen). Mazurka 40
Good mazurka, containing many elements of attractiveness. Variety of form makes it useful.

GÄNSCHALS, C.

Op. 78. Farewell Greeting (Scheidegruss) . . . 30
A typical piece of salon music of the better class. Melody and harmony will appeal to the listener.

Op. 27. Heart-Love (Herzlieb) 30
The melody is mainly expressed in octaves and sixths, combined and broken. Excellent and very interesting.

Op. 123. In Twilight (Au Crépuscule). Melodie 30
Pretty melody by the same author. Nice study in double notes, and absence of octaves makes it extremely useful.

GEIBEL, A.

Messenger Two-Step March 40
Brilliant two-step, by a popular author. Not hard to play. A favorite with the leading bands.

GIESE, T.

Op. 215, No. 1. In the Fresh Green Fields (Hinaus ins frische Grün) 40
The freshness of the fields exhales from this piece, which is characterized by airy cheerfulness.

GOERDELER, R.

Babb'ing Waters. Morceau de Salon 50
Typical example of this author's popular compositions. Certain to please, and it is useful for teaching purposes.

Dream of the Shepherdess. Morceau 35
An excellent piece of salon music. Not especially hard to play. Good exercise in finger work.

Yuletide Bells. Morceau de Salon 35
The jollity of Christmas is in this piece. Pretty cross-hand passage in second part is an attractive feature.

GREGH, L.

Op. 37, No. 2. Return to Me Soon (Reviens Vite) 35
Splendid study in melody playing, the melody being given to both hands. Very striking composition.

HEINS, C.

Op 184. At West Point. Marche Militaire . . 35
Good study in march playing. Dignified and attractive. Requires octave playing.

Op. 93. Enchantress (Die Zauberin) 40
Good practice in octaves and full chords. Arm and wrist must be well controlled. Brilliant and taking.

Op. 156. Gitana. Mazurka Brillante 40
Very brilliant piece of salon music, requiring considerable control of hands and arms. Grace notes should be light, and the staccato crisp, but firm.

JENSEN, A.

Dance of the Elves. Scherzo 25
Full of dainty effects, it is certain to please, and will develop daintiness of touch and phrasing.

JULLIEN, P.

Op. 44. Captive Bird (L'oiseau captif). Caprice 40
Capricious as the movements of a bird. Requires brilliancy of touch and a light wrist.

KIRCHNER, F.

Op. 20, No. 2 Rumbling of the Mill (Mühlenrauschen). Descriptive Piece 30
The rumble of the mill is here. Melodious and full of movement.

KOELLING, C.

Op. 355. Spring Thoughts (Frühlings Gedanken). Impromptu 60
No melancholy is suggested by this piece. Fresh and cheery, with a little touch of seriousness, it moves on its way.

KRENTZLIN, R.

Op. 7, No. 1. Slavonic Dance. Characteristic Piece 35
The fire and abandon of the Slavic nature is in the music. Splendid study and a fine concert number.

KROEGER, E. R.

Op. 42, No. 1. Intermezzo Scherzoso 50
The effect made by the contrast in movement of two hands is delightful. Thoroughly characteristic.

LACK, T.

Op. 92. Song of the Brook (La Chant du Ruisseau). Idylle 50
Good example of the brilliant, descriptive pieces. Affords good practice, and repays the work it demands to perfect it.

LARDELLI, G.

Toccatina 40
The quaintness of the old form is well preserved, the movement is flowing and the melody attractive. Good example of this form.

LEGE, W.

Op 55. Elf Play (Elfenspiele) 35
Very characteristic. Will require practice to properly play it, but is well worth all it demands.

MEYER-HELMUND, E.

Op. 72, No. 2. Valse Miniature 35
Good concert waltz for pupils' recitals. Brilliant and graceful.

MUNRO, E. R.

Hunting Song (La Chasse). Characteristic Piece 40
No accidents in this hunt—unless the player causes them—for the piece swings along with joy and vigor to the end.

NIEMANN, G.

Op. 29, No. 12. The Chase 20
Short, but sure to please. Wrist touch is required, and must be played crisply.

PACHULSKI, H.

Op. 12, No. 3. Phantastic Fairy Tale 35
Strong musically, of considerable difficulty, requiring a good legato, but well worth careful study.

PEACOCK, W.

Sweet Memories 40
Attractive and presents no particular difficulties. Brilliant concert favorite.

PULLAN, C. H.

Echoes of Spring. Morceau de Salon 50
A popular piece of salon music, useful as a study piece.

RATHBUN, F. G.

Op. 15. Danse Impromptu 50
Characteristic composition by a well-known writer. Besides being a pleasing salon piece it furnishes instruction.

ROSENHAIN, J.

Slavonic Melodie. Tone Piece 35
The more sombre tone of the Slavic race is brought out here. Not only interesting, but beautifully impressive.

RUBENS, F.

Op. 17. Spanish Dance (Danse Espagnole) . . 25
Original and brilliant. Will demand practice, but repays it.

SAINT-SAËNS, C.

Mazurka in G Minor 35
Requires complete mastery to properly bring out its full effect, but is well worth the study.

SAMARY, F.

Op. 17. Song of the Flowers (Chanson des Fleurs) 50
Melody and accompaniment in right hand. Two well contrasted subjects. Somewhat difficult.

SCHEHLMANN, L.

Under the Village Linden. Peasant Dance . . 35
Characteristic dance, full of vivacity and good humor.

SMITH, W. G.

Op. 74 Danse Pittoresque. Scene de Ballet 35
A decidedly attractive composition. Somewhat odd in style, it holds the attention. Good study, without great difficulty.

SPINDLER, F.

Op. 306, No. 1. Till We Meet Again (Auf Wiedersehn) 30
Tender melody, capable of much expression. Is developed into a good finger study without losing its pleasing quality.

SPINNEY, W.

Sweet Reverie. Berceuse 35
This beautiful transcription of an organ piece is a splendid study in melody playing.

STONE, A.

Electra Scene de Ballet 40
A taking composition. Melody given out by right hand, left hand responding. Brilliant and effective; not difficult.

SUDDS, W. F.

Op 236, No. 1. As It Seemed to Me. Gavotte Sentimental 40
The sentiment contained in this piece is healthy. The music is strong, fresh and bright. Sure to please.

Op. 224. Our Brightest Days. Gavotte . . . 40
Another of the same kind, and by the same author. Sprightliness and vigor are its characteristics.

TONNING, G.

Danse Norvégienne. Characteristic Piece . . . 50
Brings out national characteristics. The rhythm is odd, and it requires clear phrasing.

TOURBIE, R.

Op. 206. Little Curly Head (Krausköpfchen) . 40
The curly-head must have been a lively little chap, if the music is at all like him. Gay and full of fun.

TOWERS, J.

Life's Springtime. Rondo 50
The title page says, "a joyous rondo," and the saying is descriptive. Thirds and full chords are interspersed with finger work.

WACHS, P.

Song of the Bathers (Refrain des Baigneuses). Barcarolle 40
Very brilliant and taking. Light wrists and arms, with firm touch will make it go.

WILLIAMS, F. A.

Op. 17. At the Twilight Hour. Nocturne . . 40
Very pretty descriptive sketch, well worked out and with well contrasted subjects. Good for study and the parlor.

Op. 20. Danse Fantastique 40
Another attractive teaching piece written by a teacher and sure to please as well as instruct. Good passage work.

Op. 22. Fountain in the Forest. Mazurka Impromptu 40
Considerably more difficult than the preceding. Useful for teaching and pupils' recitals.

Op. 24, No. 2. Water Sprites at Play 40
The sprites are active and sportive. The piece is full of grace and spirit. Pretty and useful.

BOOKS.

Teachers' Department

YOU will be interested in the announcement that we have established a **Teachers Department**, under the direction of a teacher of twenty years' experience, which will be entirely devoted to searching out, preparing, and supplying EVERY want of ALL classes and grades of teachers. This department is intended to aid the teacher in securing such music and other teaching helps as he may need. Preparations for its establishment have been making for the past four years, and it is already equipped with unusual helps. Behind it are the immense resources of the Oliver Ditson Company, which will be drawn upon to supply all demands.

We also send music ON SALE. These selections are made up of the latest and best teaching music. Our circular describing this method of supplying teachers will be sent on application.

We Solicit Correspondence and Will Welcome Inquiries.

As already stated, this department is intended to aid teachers in securing proper teaching material, hence we will gladly answer questions and give suggestions to those who care to avail themselves of our help. Write us, giving full information as to the amount, grade, and style of music you use, and we will send you our catalogs, and keep you informed concerning the latest editions of Teaching and Choir Music. Address

Teachers Department of Oliver Ditson Company, Boston, Mass.

A 474

IF YOU TEACH MUSIC

You will find our series of **new** analytical, thematic catalogs of selected songs and piano pieces invaluable as time savers and money savers. Thematic lists have been attempted before, but nothing has ever previously been done with such completeness and thoroughness as these.

Each piece is carefully analyzed by one of the most eminent authorities on musical pedagogics and graphically illustrated with adequate musical quotations.

Teaching Pieces and How to Teach Them. Three books, including about 600 pieces closely graded from I, through half grades, to VII.

Selected Songs. Three books, including about 450 songs for high, medium and low voices, bass and baritone.

Any one or all of the above catalogs will, upon request, be **SENT FREE**

NEW MUSIC BOOKS

5. Waltz 25
6. Fairy Song 25
7. March 25
8. Album Leaf 25

Mokrejs, John.
Village Scenes.
A set of six characteristic and instructive pieces in second and third grades, complete 60

Newcomb, Georgia D.
Album Leaves 50
A set of six character pieces in the first and second grades.

Powers, Mary L.
Echoes from Music Land 75
A collection of easy, short, instructive piano pieces. (Mostly two-part writing.)

Schoenefeld, H.
Op 21. A set of instructive piano pieces in dance form without octaves
1. March 25
2. Minuet 25
3. Polka 25
4. Valse 25
5. Mazurka 25
6. Gavotte 25
7. Tyrolienne 25
8. Polonaise 35
Dance Forms Without Octaves.
A set of first and second grade pieces.
1. March 25
2. Waltz 25
3. Polka 25
4. Mazurka 25
5. Schottische 25
6. Tyrolienne 25

Weldig, A.
Miniatures.
A series of instructive pieces of easy grade.
1. Commodo 15
2. Cantabile 25
3. Tempo di Valse 25
4. Scherzando 25

Any of the above will be sent for examination.

DO YOU REALIZE

the helpful work we are doing in the matter of examining with great care all new musical publications from which we select only the best and most interesting and list them in *The Music Review*, giving a description of their character, grade of difficulty, etc.

The Music Review

is published monthly, excepting July and August, at a subscription price of 50c. a year.

Consider how valuable to the teacher of music such a catalogue will become as a book of reference.

Modern Foundation Studies
—in—
Piano Playing
Graded for Beginners.
By W. F. SUDDS.

The great progress made in the art of piano playing during the past few years has, to a large extent, rendered older books of instruction obsolete. All good works contain the proper material, but its arrangement, and the method of presenting it to the immature musical mind, often leaves much to be desired. Improvement of these particular features—the arrangement and method—has been the guiding thought in the preparation of "Modern Foundation Studies."

It is a work for beginners, and matters of vital importance, such as formation of the hand, methods of touch and tone-production, are treated in detail. In addition to the comprehensive treatment of these subjects and numerous musical examples, exact positions and movement of the hands in the proper performance of the various touches are profusely illustrated. This feature will be appreciated by teachers.

The work contains foundation material on which the most elaborate superstructure may be safely built. The music has been selected with great care, to clearly illustrate the point under consideration in an attractive manner without wearying the student.

MARY M. SHEDD, TEACHER OF SINGING

74 AUDITORIUM BUILDING, CHICAGO

Voices tested free. Only those worthy of training accepted. One possessing a voice of a good quality should study regardless of age; muscles supporting pure tone are always capable of development. The talented pupil, if correctly taught, will understand in one term where the great natural force that develops volume and purity of tone lies. To sing as Melba, Patti, and De Reszke is not a difficult thing to do. Every acceptable voice, if correctly guided, should acquire that PERFECT tone; else why should one study? ALL SINGERS, excepting our GREAT ARTISTS, sing with the throat muscles. They THINK they do not, but IF they did NOT, their voices would grow into tones spirituelle in their beauty and with double the volume. All the expressions regarding head, throat, tongue, lips, nasal, stroke of the glottis, holding the breath while counting, and tone colors have absolutely NOTHING to do with foundation work that develops true, sensible, artistic singing. There is but ONE way to learn to sing, but in this way science and nature lead the voice so systematically that years are not required to reach perfection.

THIS SYSTEM IS COVERED BY COPYRIGHT.

MUSICAL KINDERGARTEN FOR THE PIANOFORTE

By FANNIE CHURCH PARSONS.

This system is most simple in outline and material.
It is most comprehensive and complete.
The materials used are, while very durable, most suggestive of the beauty of the art of music.
The lessons are equally instructive to either child or adult beginner.
The students do much real piano work, thus no intermediate course is necessary.
The stories and songs do not savor of the grotesque, but tend to refinement and culture.
The price for normal work, including materials, is within the reach of all.
The work can be taken by mail, or of a normal instructor, or of Mrs. Parsons personally.
Teacher's training classes conducted by Mrs. Parsons are formed the first Tuesday in each month in Chicago studio.
Send for illustrated booklets. Correspondence should be addressed to

SOLOISTS AND THE GOLDEN RULE.

A Plea for Accompanists.

FAY SIMMONS DAVIS.

A great deal has been said and written regarding the poor and inartistic work of accompanists. In many cases, their work is inferior to their ability. The reasons why I will endeavor to state in as few words as possible. First, I wish to suggest to the soloists one remedy—the Golden Rule. Take this every day, in small or large doses, as the occasion demands, and you will reap a great reward in securing better work.

I am an accompanist myself; naturally my heart goes out to all my fellow-sufferers. They, I know, will be glad to have their side presented. If I could change and be a soloist for a few years, I should remember the days "beyond recall" and live my life according to the above rule, expressed again in these words:

"Does any man wound thee?
If so, take unto thyself the *kind* of pain
That thou mayst ne'er inflict it on another spirit."

We accompanists are anxious to work faithfully in the effort to keep pace with progressive art; but imposition is hard to bear. We all desire success, but this comes only through united effort and *consideration*, combined with musical education. May this unity be accomplished soon, for "Art is long, and Time is fleeting." My private opinion is, of course, worth a great deal to me. The only weight I expect it to have with the class for which it is expressed is to cause them to *think*. This step will at least lay the corner stone for better things.

The principal reason for the non-existence of sympathy between soloists and accompanists, is the lack of consideration shown by the former for the latter. I refer now only to the *equally good* on both sides, those working together at the same time, and by soloists I mean those requiring the services of an accompanist. Accompanists should, above all, be musically gifted. They should, moreover, be thorough students, theoretically and technically; they should be able to read rapidly, and should be full of sympathy in following the soloists. But even the best cannot be artistic, and read rapidly, and follow perfectly a difficult work at a moments notice. They cannot, with credit to themselves, transpose a difficult, unknown composition at sight, whenever they are requested to do so. The soloists who really do unto the accompanist what they would have done to them, and are *then* given poor work, have my sanction (and that of all my fellow-workers), to use all the strong language required to express their righteous wrath. The following incidents, experienced by two friends, are true. They are but two out of hundreds within my knowledge.

A young lady was to sing at a very artistic concert. Her carefully studied, long prepared selection was a difficult one. She knew that Miss T. was to play it for her. Miss T. waited every day for the music; unlike a bad penny, it never turned up. The concert night arrived and Miss T. reached the hall in a state of great nervous excitement. The singer, full of confidence in her well learned piece, confronted her with, "I did not send the music because you were so well known as a fine accompanist." The remark was intended to be kind, but Miss T. gazed at the cadenzas, and octave passages with a sinking heart, feeling as Tom Sawyer did when he attended his own funeral. The imitations and themes in all their significance arose before her. Somehow, her high-strung condition enabled her to possess unusual concentration, and there were no noticable mistakes. When "all was over" she returned to her home to pass a nervous, sleepless night. The singer arose refreshed, and read the account of her success in the daily press, with but a passing glance at the uncomplimentary words regarding her accompanist. The Golden Rule had evidently never been written in her Book of Life!

Two Symphony men were to play at a certain concert. Although familiar with the name and address of the accompanist, Mr. H., they lived oblivious of his existence until the concert day arrived. They then sent him word that they would "run over" their pieces with him just before the concert. One sympathizes with Mr. H. in wishing that something would "run over" the men instead. On this occasion two different compositions are given him, each in a difficult key. Running passages, octave work, and glorious places for effects and coloring (over which his soul would revel at another time) now almost drive him to despair. Unlike Cæsar, he cannot do several things at once, at least, not at sight. In many places, therefore, the patience of the soloist is severely tried. At the close, they accept the compliments they receive with Uriah Heep humility, explaining, however, that "Mr. H.'s poor work upset them many times."

O Tempora! O Mores! How can we expect "perfect harmony and sympathy," 'twixt such as these? Were I a Beethoven, with the language of a Shakespeare, perhaps this magazine would allow me several pages in which to express the "thoughts that arise in me" at such instances. We love our art; we have sacrificed many dear things for this dearer one, and it is no joy to us to sacrifice this on occasions when we just "get through" without a fall. Many sins have we forgiven, oh soloist, but we, as well as the proverbial worm may turn, and will, when you are thoughtless and unjust, and responsible for such errors.

"Search thine own heart,
What paineth thee in others
In thyself may be,"

can be applied by any artist to another.

Let all who enter into the sacred realm of music, "reverently, discreetly, advisedly, soberly, in the fear of God," try to observe the Golden Rule. The result will add nobility to art as well to character. Many perplexities will be cleared away, without our waiting for the world to end, and music will become in all truth, the "speech of angels."

TOPSY TURVY MUSICAL EDUCATION.

EFFIE W. MUNSON.

Those who were interested in the Paris Exhibition will doubtless recall the description of the "topsy turvy" house. This edifice apparently rested on its roof, visitors entered by means of the chimney, and wandering through the rooms, saw chairs and tables clinging miraculously to the ceilings, and found everywhere an amazing inversion of the usual order of things, all as the result of a clever arrangement of mirrors.

Some pupils who come to the teacher remind one very forcibly of this curious freak of architecture. They have had a topsy turvy education; they tell you that they have studied Mozart and Beethoven, are familiar with Schubert and Chopin, yet when asked to play something, reply: "Oh, I can not, I am all out of practice," or "It is so long since I studied that, I can't play it at all."

Searching questions on the part of the teacher reveal the sad fact that the pupil knows no scales, no arpeggios, has no idea of legato or staccato, while a musical phrase is an entirely unknown quantity. Yet he may play the Moonlight Sonata or the Nocturnes of Chopin in a manner which satisfies himself, though the musical listener may be in torment. There are hundreds of cases like this, for as certainly as America can boast of a vast number of music teachers whose work is unexcelled, so is it also the country where the incompetent teacher flourishes, especially in the small town or village. The demand for the greatest results from the least possible amount of study, causes the teacher to crowd the pupil unduly, and the cry of parent and pupil for "pieces, pieces," leads to a neglect of the essential foundational work, and in consequence thereof, we have a topsy turvy education which is practically no education, any more than the Paris architectural freak was a comfortable habitation.

I am acquainted with a lady, a thorough musician, whose first lessons were given by a teacher whose habit was to put every pupil, regardless of temperament, through a certain course, Plaidy's exercises being a most important part of the study. No attempt was made to teach artistic tone production. The faster the exercises were played, the better, and if the pupil could not do them fast because of stiffness of hand or wrist, the trouble was never explained, but the directions were simply, "Practice till you *can* do them."

After some years of this sort of study (?) my friend went to one of the best of our musical colleges supposedly to *continue* her studies. Much to her chagrin, she was obliged to begin all over again, in order to learn the elements of tone production. As a result of this experience she made a solemn vow that if she ever taught music, she would so teach the rudiments that no one would require *her* pupils to go over their first work—and she has kept her word.

The pupil with a topsy turvy education is apt to be quite satisfied with himself. Never having heard a great deal of music, and never having been taught to listen critically to his own playing, he has no ideal higher than that which he is able to produce for himself; therefore, the first thing is to create for him a higher standard, and teach him the importance of tone quality, for it follows that he cannot produce a beautiful tone by false methods, therefore if the ear is seeking for beauty of tone, there will be created the desire to train the muscles to produce that tone.

Where the habit of critical listening is acquired much has been accomplished, for a musical pupil will usually be willing to work earnestly in order to improve the quality of tone his fingers produce. And if it is made clear to him that certain faults, as stiffness here, or too much flexibility there, are hindrances, he will speedily acquire a beautiful touch.

Why, therefore, let pupils use fingers and hands as they please at first—concentrating the thought on correct reading and correct time values? Why not teach from the beginning the production of beautiful tones made by flexible wrists and firm finger tips. Even a tiny child is interested when you tell it to make the fingers sing, and the various touches may be taught from the earliest lessons to quite young pupils.

Having once laid the foundation by teaching the pupil that use of finger, hand and arm which will produce the most musical tone possible, a variety of touches may be added in their turn, until the words legato, staccato, arm or wrist touch, etc., suggest immediately to the mind the corresponding muscular action. Then upon this sure foundation, build, as the days go by, as beautiful a technical structure as the ability of the pupil will permit—sparkling scales, rolling arpeggios, brilliant octaves and so on, not forgetting for one instant that all technic is but a means to an end, and that end is an intelligent and expressive interpretation of the masterpiece of the composer.

THE Teachers' Forum

Conducted by N. J. COREY

This department is inaugurated for the purpose of uniting the many teachers who read THE MUSICIAN in a bond of professional brotherhood. It is to be their medium for the interchange of ideas, experiences, encouragement, discouragement and difficulties. The fullest correspondence is invited. The questions will be answered and suggestions given by the conductor and the contributions of those who wish to gain new light or to present their methods will be printed. We propose helping ever teacher who will permit us to do so; we intend to do everything possible to overcome the isolation with which you are burdened. Will you co-operate with us?

No conditions are attached; the department is open to *all* MUSICIAN subscribers. Address all communications to the Teachers' Forum, care THE MUSICIAN, Eighth and Locust Streets, Philadelphia, Pa. Do not hesitate, but be among the first to ask help, or to give some other teacher a suggestion. Let us know what you would like to have treated in its columns.—Editor of THE MUSICIAN.

'The gates of art are closed unto none; who so entereth thereat, though he seeketh perfection, yet shall he not find it."

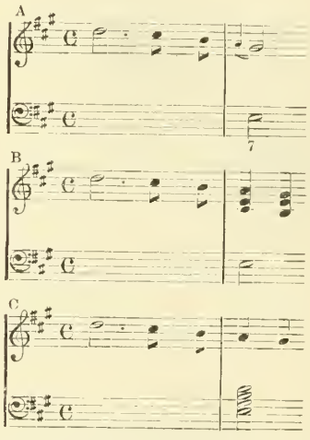
—Ancient Egyptian Papyrus, 3580 B. C.

MORE ABOUT GRACE NOTES.

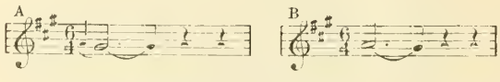
"I was very much interested in the article in the July MUSICIAN about Grace Notes. This was just what I needed, for the correct performance of grace notes has been troubling me somewhat of late. I had about come to the conclusion that they could be performed in two different ways, either of which was to be determined by the nature of the passage in which they occurred. This seems to be the best with the mordente; what do you think about it? Do you think it best in some pieces to play the mordente like a triplet, accenting the first note, and at other times to play the first two notes before the principal note, and accenting the principal? Nothing confuses me so much as Liszt's Second Rhapsody, which is full of extraordinary graces. Will you look this piece up for me? Take the second page for instance. Look at the third line, the end of it which commences 'a capriccioso.' The first grace, D, is plain enough, but the following graces attached by a slur to the chords, are these supposed to signify little broken chords, or how are they played? Similar things occur farther on in the 'Friska.' What is your opinion about all these things?"

The foregoing letter may serve as a type of the questions that have been raised in the minds of many teachers since the publication of the article in the July issue in regard to Grace Notes, and I will use it as a text for a few more remarks on that subject. As was hinted in that article, grace notes took their origin either in the desire to produce the effect of an accent, or the prolongation of the sound. Upon the old instruments that preceded the invention of the pianoforte, neither of these effects were possible, hence the introduction of something that would take the place of them. There were an almost innumerable series of these ornaments, but most of them have gradually become obsolete with the perfecting of the modern pianoforte. Those that have remained in most common use until the present time are the turn, trill, mordente, prall-trill and the long and short appoggiaturas. The mordente consists of the principal note and the one below. The prall-trill is the inversion of this, although the term mordente has come to be indiscriminately used for either one.

Before proceeding to answer the foregoing question, it may be well to say a few words about the long appoggiatura, as there is some confusion as to the distinction between it and the short appoggiatura, or acciacatura, a term to which the musical world does not seem to take kindly. In reality the long appoggiatura does not belong to the class of ornaments. Its chief difference from the short appoggiatura is that it is a melodic essential, while the latter is not. Those who wish to be captious might maintain that any note a great composer put in is essential, but it is not in this sense that I use the word. The reason why the long appoggiatura may be regarded as an essential to the melody is simple. Among the old composers, in vocal works and those in which the harpsichord was used as an accompaniment to other instruments, only the bass was written for the use of the musician who played the harpsichord and the accompanist was therefore obliged to supply the harmonies from figures written underneath it. When no figures were placed beneath the notes, the accompanist understood that he was to supply the simple triads that belonged with each note. Although it was easy enough to write the figuring for ordinary chords, yet the indication of dissonances was not so simple, and composers began to write certain dissonant notes smaller than the others, thus indicating that the harmony belonging with its resolution chord was to be used. A couple of illustrations taken from Haydn's "Creation" will make this clear.



The original passage stands as at A. Had two quarter notes been written in the second measure and no figure in the bass, the accompanist would have played harmony as at B. But with the figuring as at A, the accompanist understood that the seventh chord belonging with the second note was to be played and that the first note was an unprepared suspension, and would play as written at C, which is the way it is written out in the pianoforte score. There were definite rules for the performance of these appoggiaturas which every well educated singer and player understood. If the large note was twice the value of the small one, the time was equally divided between the two. If the large note were three times the value of the small one, the appoggiatura would have two-thirds of the value of the principal note. As in the foregoing illustration if the *g* had been written as a dotted half note, the singer would have sung the *a* as a half note while the *g* would only have the value of a quarter note. When the principal note was tied to a shorter note following, the appoggiatura was given the full value of the principal. Thus if the foregoing had been written as at A it would be sung as at B.



In the following from "With Verdure Clad," it will be seen that the entire chord is suspended instead of a single note. Written as at A, sung as at B.

There were other rules and certain exceptions, but I have given the principal ones, as they may help to clear up some of the confusion that results in the study of the works of Bach and the early composers. Had these musicians lived at the present time they would have written the appoggiaturas out in large notes as is the custom with the composers of to-day. It was found that the practice of playing from a figured bass was apt to result in disaster when in the hands of inexperienced players or those lacking in judgment, and hence it came gradually to be discontinued and the accompaniments written out in full. The practice of writing the appoggiatura notes small continued, however, for a long time after the need for it disappeared. The custom began to be discontinued in the time of Beethoven, as they were so often confused with the short appoggiaturas.

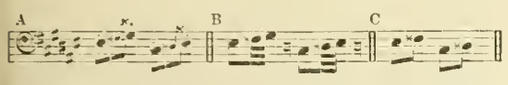
In regard to the mordente concerning which our correspondent writes, I would say that at the present writing I can think of no instance in which it should be played as a triplet. Occasionally, passages may be found in which it is indicated, but must be played with such rapidity that it is impossible to make anything else than a triplet of it. In such cases it ceases to be a mordente, and the letters *tr* would better have been placed over the note. The triplet carries with it the feeling of motion toward some definite point and therefore very often if a mordente and its principal note are played as a triplet a sense of undue importance will be conveyed to the following note. A good illustration is contained in the first two notes of Chopin's Impromptu in A flat. Many players perform it as if written as at A. But this brings the D into undue prominence and with a consequent weakening of the effect. If, on the other hand the passage is played as it is written at B, this flabby and inconsequential effect immediately disappears and it at once assumes a strong and vigorous character.

Mr. Mathews, in September *Music*, has some very excellent remarks anent my article on Grace Notes. While agreeing with my article in the main, he dislikes to give up the traditional renderings, although he admits that writing out the grace notes gives a misleading impression of the true effect to be produced. He says:—"Mr. Corey is plainly wrong in implying that the mordente when properly played misplaces the rhythmic accent. The truth is, that a well-played mordente is given with a single motion or impulse, the three tones coming so quickly after each other that the accent is as much upon the last tone as upon the first, the effect of the mordente being almost like that of the principal note and the auxiliary struck absolutely together. The mordente is a strong melodic accent, and to give it before the beat is to emasculate and spoil it."

It is evident Mr. Mathews agrees with the spirit of my remarks, as may be seen from the following quotation from my article. Speaking of the laborious attempt to exactly place these graces, the article says: "But why from either measure? Anyone that has the ability to play these works ought to have the skill to let all such graces drop lightly and trippingly from the fingers without appreciably interfering with the rhythm of any of the principal notes. If the musical sensibility is taught to place the principal note where it belongs—upon the accent—there will be little difficulty with these grace notes taking care of themselves and assuming their proper function as ornaments and not principal notes. When such notes are written out large the entire complexion of the composer's melody is changed."

This is not so far away from the spirit of what Mr. Mathews has said. I would only take issue with him in his first and last sentences. I do not imply that when the mordente is properly played the rhythmic accent is misplaced, but only when it is improperly played. But on the principle that two bodies cannot occupy the same space at the same time, I cannot concede that a mordente and its principal note come exactly together, no matter how infinitesimal the time occupied by the grace. I cannot concede that there can be an accent upon the first note of the grace and the principal note also, for this would mean two accents no matter how infinitesimal the time, and the shorter the time the more difficult to make two accents. The moment the mordente is accented it ceases to be an ornament and at once its two notes become melodic principal notes. Grace notes have ceased to fulfill their original function as accents, as the need of them for this purpose has passed away. They do attract attention to the principal note, but in a different way than formerly. Artists feel this so strongly that they have in the earlier works, where these graces appeared in such profusion, discarded many of them altogether, playing only such as give an added grace and lightness to the passages in which they are found.

In regard to the Second Rhapsody of Liszt, concerning which our correspondent asks, it seems to me that enough has been said to make their performance clear. I would suggest to all correspondents, however, that in asking for information concerning certain passages in compositions, that they designate the number of the measure and movement. To ask about the "third line" has technically no meaning in musical parlance, and even though it be plain as to the intent, yet editions vary so much that it is sometimes difficult to verify the question in its correct location. I take the question to refer to the 27th measure in the "Lassan." Interpreting it by the spirit of the remarks that have been made, play the grace exactly as it is written, tying the upper note to the G sharp following it. In the introduction the small notes should be played ad libitum. The great artists play them with the utmost deliberation and emphatically. The graces in the "Friska" are also played exactly as written, dropping them lightly and delicately from the fingers, tying the upper note to the one following. Rive King once prepared an edition of this Rhapsody in which she showed her devotion to tradition and authority by writing out all the grace notes in full, and thoroughly pedagogically. The result is one of the most grotesque perversions I have ever seen. Had Madame King waited until the present time, I do not believe she would have done it, so much have we outgrown such things in the last twenty years. The following example will show how false the representation becomes.



The composer as at A, and the large notes represent the proper melody notes. But if played as rewritten at B, the melody notes become as at C. If this editor had been consistent she would also have rewritten the passage at A in the next illustration which she left untouched. It would then have become as at B thus

forcing the accent on to the lower note at C, really making a new melody, as indeed is always the case in such perversions. On attempting to play this passage strictly according to rule, beginning with the 41st measure in the Tempo giusto vivace, it will be found that the effect is simply unbearable, so harsh is the dissonance. The editor evidently felt this, and therefor it was the only place in the composition in which she left the composer s notation untouched.

THE RELATION OF TEACHER AND PUPIL.

EVA HIGGINS MARSH.

That "good teachers are born, not made," is doubtless a wise saying, but it is a fact, nevertheless, that out of comparatively poor material good teachers may be developed. The ideal relation of the teacher to the child, primarily a matter of instinct, develops in proportion as the teacher himself, being teachable, daily becomes familiar with new characteristics in child life, new phases of child teaching and evolves an appropriate method to properly fit each new case.

The true relation of teacher and pupil is that of a mutual benefit society, in which the teacher is the older member, imparting more that receiving as a matter of course, but a member with the child of the great band of music lovers and workers. What characterizes this mutual benefit society?

I. Mutual Confidence and Love.

To win these is the first step in the right direction on the part of each member. The spirit which trusts everyone, thinking no evil, is characteristic of a child. As he grows older this disappears, due in part to a better knowledge of our evil world, in part to the fact that at a certain age the child begins to be conscious of himself and his own ability and grows to think he knows as much or more than the teacher. It is the province of the teacher to change his trust, which is largely negative in character, into a positive love and confidence, bestowed because he sees reason for it.

The child mind, if normally active, will ponder and question and must be satisfied. Of what use is music study? What are these innumerable exercises for? Why must he do all these? The best answer is to give him a glimpse of the great tone world into which he is just entering. He is learning, step by step, the path to a hitherto unknown land. The way will seem rocky and hard, with barren desert places and few friendly oases. Let him thoroughly believe that there is a desirable as well as a desired end, and that the teacher knows what lies beyond. Show him these to his satisfaction, in answer to his questions, put the exercises as a means to an end, and if the child be musical his confidence is won. Give him an insight into the beauty and pleasure of this unknown and his trust is sure. When the child is not musically inclined this will not appeal to him. Only material things can be made plain to such, and material means the teacher must employ. To an ordinarily gifted child this new world may be opened. By gentle guidance, patient, loving work he will love you, not only for these characteristics, but because of the new truths he is learning. No one should embark upon the sea of the music teaching life to whom child study is not a pleasure; who cannot put himself on a level with his youngest pupil and work *with* him there, leading him as a sympathetic friend and wise guide, not reaching down from an exalted height, which the child is made to feel.

Activities have now been created, the responsibility for their direction and cultivation rests with the teacher. Now is needed

II. Mutual Ambition.

Then is such a thing as allowing a boat to drift with the current, an easy way to go down stream, escaping all care and responsibility. But there may be shoals or hidden rocks in the way. And suppose your destination is up stream? What then? Ah, you must not only *direct*, but *work*.

In order to gain the best results, an incentive for better work is always necessary. Work, not only to escape the danger points, but to gain definite results. The prize, or tangible reward, if used judiciously, is all right. There is a higher reward that gratifies the faithful student, the knowledge of having given your best efforts. The best reward, and surely it is a wise and worthy incentive, is the fact that the world of music grows ever brighter; that there is always something beyond that to which we have attained which makes the upward path worth traveling. Yesterday's work, its finger exercises, its carefulness of practice, make possible to day's melodious piece. And still more enjoyable work lies before us. We tell the child it is like the sea. How glorious, how far-reaching it is. We fill our lungs with the salt breezes, feast our eyes on its myriad of colors. Embarking upon it, it still stretches before us, seemingly limitless. We fain would know what beautiful shores lie beyond. Such is music to a musician's soul.

How petty in comparison is the incentive we in all weakness often give of competition. We say, "Let no one get ahead of you; what another child can do *you* can do," making the aim simply to outrun another. This very often acts like a tonic, but let the pupil learn to run for the prize that lies before *him*, not simply to outstrip his fellow-pupil.

Another characteristic of this ideal relation which may be sustained between teacher and pupil, we will call

III. Mutual Uplift.

This comes from seeing beauty in music, and in other things as well, and from an awakened imagination. First, let the pupil be taught the characteristics of a beautiful tone, clear, full and singing and *how to produce it*. Once shown the difference between a harsh tone, produced by tense and rigid muscles, and a singing tone, produced by pressure and a relaxed hand, he will want the latter. One is noise, the other music. The possibility of producing a musical tone can be kept before the child from his earliest lessons. Make musical playing, both as to tone and feeling, your aim.

To this end the teacher should endeavor to foster the imagination of his pupil. This demands discrimination in choice of pieces. True beauty in music is capable of something higher than physical gratification. It enables, uplifts. For a child who plays mechanical, perhaps, chose a piece in which his imagination can have full play. For example, take "Evening" in Jos. Löw's "Teacher and Pupil." A little suggestion will enable the child to feel the gentle Summer twilight in the quiet tone and slow movement; to see the beauty of the slowly sinking sun; the illumined clouds; the faint twitter of birds make the piece create the restful atmosphere of an ideal "Evening." You will be doing the child a lasting benefit if you make him perceive these things and interpret the music accordingly. In tune, the music itself will create an atmosphere of its own, independent of material illustration. It was five o'clock when my small boy came for his lesson. We were learning a duet, "See, the Sun is Sinking." He said: "I think I can play this much better to-day, for evening is coming on outdoors." He had remembered and appreciated my description of the piece.

The art of apt illustration plays an important part in the ease with which signs, notes, etc., are learned in the early lessons. Birds singing on five telegraph wires, the bird on the first line, singing E, is one teacher's way of teaching lines and spaces. My pupils never confuse a whole and half rest after once seeing in the first a hat, which is taken off the line, - . Our friend, the note, stays away for the whole measure. When he can remain but two beats he keeps it on, . For accent, the natural accent or emphasis used in speaking a sentence is a clear illustration. "*Harold* learns a *lesson*" shows a primary accent on count one. For tone coloring, lights and shadows in a picture are requisites to give expression and meaning. The beauty of the piece is enhanced as is the beauty of a picture by such means. The teacher is practically unlimited in her use of illustrations, if she once set her mind to work. Accellerandos and diminuendos may be compared to the starting and stopping of a train, with which everybody is familiar. Behind the notes lie for each of us an imprisoned song or story, which we are trying to release or express. For an unimaginative pupil selections from the best operas are valuable, because of this very point in their favor. There is a song, a situation which we can describe and strive to express.

When such relations as these are sustained, what is the result? For the child, it cannot but make the world of music real. Much of its drudgery is lightened. Too many children grow to hate music lessons and practice, for no other reason than that the teacher has missed his true calling and inspires no confidence—neither arouses a love for music itself. I often tell stories from the childhood of the master with a decided moral teaching. The keynote to Bach's copying music by moonlight for six weary months is perseverance; of Händel practicing in the lonesome garret it is overcoming difficulties by work. Haydn's success is the round of patient perseverance. Make the application pointed and practical. Such relations result in broadening the teacher's mental horizon and vision, in quickening his ingenuity and his sympathy with childhood.

Is it not a demonstration of the words of the greatest master: "He that loveth his life shall lose it. Except a grain of wheat fall into the earth and die it abideth by itself alone, but if it die it bringeth forth much fruit." The person who selfishly guards his little life, as tho' it were the choicest thing in the world, who never gives from it service or sacrifice for others, must lose at length the life and talent he has so zealously guarded. But the daily giving of one's best efforts, of one's choicest sympathies, generously, broadens, enriches, ennobles life and helps our neighbor to believe not only in us, but in what we profess. The seed sown may bring forth an hundredfold, the fruit of which is found not only in the teacher's life but in the pupils. The relation the teacher sustains to the child is not only a thing of high privilege, but of honor. Let us treat it as such.

FAITH.

Fain would I hold my lamp of life aloft
  Like yonder tower built high above the reef;
Steadfast, though tempests rave or winds blow soft,
  Clear, though the sky dissolve in tears of grief,
For darkness passes, storms shall not abide;
  A little patience and the fog is past.
After the sorrow of the ebbing tide
  The singing flood returns in joy at last.
The night is long and pain weighs heavily,
  But God will hold His world above despair,
Look to the East, where up the lucid sky
  The morning climbs! The day shall yet be fair.

—*Celia Thaxter.*

SIGNS OF GENIUS.

Joshua Straw—"Our boy Silas is goin' t' be a musishun, er I miss my guess."

Mrs. Straw—"Dew tell!"

Joshua Straw—"Yes, sir ee! You jes ort t' see him prick his ears when he hears you blow the dinner horn."—*Ohio State Journal.*

SYNCOPATED RHYTHM VS. "RAG-TIME."

A. J. GOODRICH.

The subject of "Rag-Time" has never interested me, and in company with other musicians I have, heretofore, ignored it. But now it is my desire to correct an impression which seems to prevail among certain people, to wit: That rag-time is a musical peculiarity invented by the recent makers of coon songs and other variety-hall concoctions. This is not true. Rag-Time is merely a common form of syncopation in which the rhythm is distorted in order to produce a more or less ragged, hysterical effect.

In the Theory of Interpretation I have already demonstrated that syncopated rhythms are used by classic composers for some of the following purposes:

1. As a relief and contrast to the monotony of regular rhythms.

2. As a means of expression or of bringing forward two opposing principles—dual rhythms being suggestive of strife or contention.

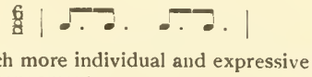
3. As local color, by imitating the rhythm of certain national songs or dances in which some form of syncopation is a characteristic feature.

That old Spanish dance, the Zarabanda, illustrates the early use of syncopation. The accented second beat was suggested by the poses of the dancers and therefore the syncopation served a distinct purpose, as it does in the more modern polonaise and bolero.

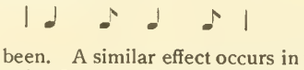
In the compositions of Bach and Händel we find that syncopated rhythms are an inherent part of the music design; Haydn used them more for the sake of variety. In the works of Mozart, Beethoven and Schubert syncopation serves both purposes, especially in their symphonies.

Every pianist will recall the leading motive in Beethoven's Sonata in G, beginning like this:

The composition of Chopin and Schumann contain innumerable instances of unusual rhythmic arrangement and combination. An interesting example occurs in the second period of the Schummerlied by Schumann, Op. 124, XVI, where the melody is divided thus:

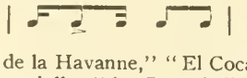


This is much more individual and expressive than the common arrangement,

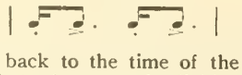


would have been. A similar effect occurs in the A flat waltz by Chopin, Op. 42. The melody is virtually in 2-4, while the accompaniment remains in triple measure.

Syncopated and dual rhythms occur prominently in many Spanish dances, especially in the bolero and the Cuban dance, Habanera. In the latter this rhythm is of frequent occurrence:



"Souvenir de la Havanne," "El Cocaye," and the famous "O jos criollos," by Gottschalk, illustrate this peculiarity very faithfully. But the rag-time "compositioners" have undoubtedly found their most direct source of supply in the Hungarian song-dances. In several works I have described and illustrated the Czardas, which is always syncopated. The slow movement (lassan) is especially so:



This dates back to the time of the Cythians and owes its origin to the unusual syllabic arrangement of the words sung to the dance. This peculiarity has been observed in the songs of Scotland and English writers call it the "Scotch snap."

Also the negro melodies contain this Iambic feature. Dvorak, in his so-called "New World Symphony," uses these displaced accents frequently, as thus in the second theme:

This is similar to a once famous Southern plantation song and bears evidence of its Ethiopian origin.

Indeed, it is scarcely possible to mention a standard composer who has not employed some form of syncopation in certain of his compositions.

I have observed that the principal charm of Nevin's popular Serenade ("Good-night, good-night, beloved") is owing to the peculiar form of syncopation in the melody, thus:

But for this genial touch of inspiration the song would be quite commonplace, as the melodic features are not remarkable. This assumes somewhat the character of a free rubato effect. (When I told the late composer of my liking for this serenade, I remember his somewhat incredulous smile as he replied: "Why, I composed that when I was a boy.")

In conclusion, it is evident that none of the so-called rag-time songs or dances is, in any sense, new or original, but that they are adaptations and perversions of the czardas, the habanera and the Southern plantation song. Also, that unusual rhythmic combinations and syncopations have been used so extensively by high-class composers that it is not possible for coon song composers to invent anything along these lines.

TOUCH AND TONE IN PIANO PLAYING.

AUBERTINE WOODWARD MOORE.

[NOTE.—This article, printed by kind permission of the Dodge Publishing Company, is taken from a book, entitled "For My Musical Friend," a series of practical essays, by above-named writer and critic.]

Our musical world was agitated not long ago by the statement of a certain professor of music that a pianist's greatest command over tone, except in the matter of loudness or softness, is exerted through the dampers, either by means of the keyboard or the first pedal. What is commonly called good or bad touch in piano playing, he maintained, lies rather in the brains than in the fingers. It is far more dependent on the manner of holding or releasing the key after it is struck, on the proper or improper use of the first pedal, and on the way successive notes of a phrase are made to follow one another, than on any particular method of striking the keys.

Forthwith was heard a volley of opinions concerning ways and means of evolving tone from the most popular musical instrument of the day. If the projector of the original bomb merely desired to call attention to the much-neglected question of damper control, he has done good work. Whatever may have been his motive, he has done well in fixing the attention of teachers and students of the piano on tone production.

It is an interesting fact that in the heat of the discussion on this vital theme the cable flashed tidings to us from Europe of the passing away of two great personalities whose contributions to tone-knowledge have been invaluable. These were Herman Helmholtz, who died September 8, 1894, and Anton Gregor Rubinstein, whose sudden death, November 20th, of the same year, was a great shock to many of us. The one shed light on tone-philosophy; the other practically exemplified the tone-possibilities of the pianoforte.

Helmholtz spanned the gulf between the science of acoustics and the art of music. Long before his time it had been recognized that the vibrations of a stretched elastic string may produce five or more different sounds, or partial tones, at the same time, the strongest of which is the fundamental tone of the string, the others being usually designated harmonics. By the most conclusive proofs he showed that the number and proportionate strength of these partial tones determine those differences of character in musical sounds of the same pitch and loudness which the French call *timbre*, and the Germans *Klangfarbe*—tone-color.

Many of us realized for the first time the capabilities of the pianoforte when Rubinstein visited America in 1872-3. The warm touch of this impassioned artist seemed to transform the ivory keys into tones whose nobility, varied shadings and infinite power of expression had never been known before. His playing was remarkable for magnificent technique, touch and tone, illumined by the fire of genius. Every technical form or figure, as well as the melody, became alive and well-freighted with sentiment when handled by his vital fingers. He has been aptly called the Russian tone-painter, the greatest colorist that ever attempted to show the gorgeous rainbow tints imprisoned in black and white. His majestic, well-sustained volume of tone won for him the title of thunderer, yet no one could be so amazingly light, graceful and full of reserve force as he. His damper-control was original and masterly, but was employed as a mere auxiliary to music touch.

He always declared the real difficulty of piano playing to lie in the acquirement of a certain kind of touch. When asked about his own touch, he would hold up his massive hand and say: "Look at that! I have phenomenal fingers, and I have cultivated phenomenal strength with lightness. That is one secret of my touch; the other is assiduous study in my early days. I have sat for hours trying to imitate the *timbre* of Rubini's voice in my playing, and it is only with labor and tears bitter as death that the artist arrives at perfection. Few know this, consequently there are few artists." Rubini was that famous Italian tenor who visited St. Petersburg in 1843.

A musical touch is unquestionably the philosopher's stone in piano playing. In its highest manifestations it may be attained by a musical temperament alone, but it may be developed to a greater or less degree by any one who is capable of learning to play. It is fatal to delay seeking it until all poetry of sentiment has been banished by that dry technique the fingers gain while the mind wanders to anything in the world but tone. It is never too early to begin to study tone, precisely as the painter studies color. Moreover, the student should always have in mind some beautiful golden tone-model which it is his continual endeavor to attain. He who is able to think tone rightly can, with skilled fingers, call it into being.

In order to produce a fine tone on the piano it is necessary to have a hand favorable, an ear delicate enough to detect the finest nuance of tone and a well-controlled intelligence enriched by poetic fancy. First of all, the pianist's touch is a mental conception; otherwise the best-trained fingers could not find their way to the keyboard. For genuine tone-production all the muscles of fingers, wrists and arms that have to do with piano playing should be elastic, pliable and well developed. There should be perfect equality of fingers and entire freedom of action. Careful consideration will soon show that when the attack has once been made, the only shading possible comes through the dampers. The judicious, philosophic use of these is a matter much neglected. It cannot conceal or make good a bad touch, but it is absolutely essential to good playing. Besides physical flexibility and grace, the player should have delicate perception, sensitiveness and a soul. No technical equipment, however large, will compensate for lack of these.

We read of the master, Johann Sebastian Bach, that his playing was remarkable for its tranquil grandeur and dignity. His fingers were so bent over the keyboard that they stood with points downward in a vertical line, ready for action at any moment. In withdrawing a finger from a key he moved it gently inward, as if taking a coin from a table. The attempt to imitate his style has made many a pianist stiff and lifeless, because the important fact was lost sight of that the keyed instrument for which he wrote and which he most delighted to play, the clavichord, had so light an action that the least pressure of the key could produce a sound. The tone of the clavichord was charmingly tremulous, reflecting the most tender gradations of the player's touch. In power of expression it was unrivalled until the modern pianoforte was evolved from all early beginnings. Bach preferred it to instruments of the spinet family, in which he found no soul, because they were incapable of dynamic modifications of tone, and to the newly-invented pianoforte of his day, which he thought exceedingly clumsy.

A rigid performance of Bach's works conceals the beauty of their melodies. Rubinstein divined the poetry of these marvellous tone creations. It was a joy never to be forgotten to hear him play the fugues in a graceful, flowing style, allowing each voice to be heard in due proportion, without letting any become too assertive. Bach's son, Philipp Emanuel, was the first to recognize the advantages suggested by the young pianoforte, and to advocate a singing tone. "Methinks," said he, "music ought principally to move the heart," and no performance on the pianoforte will succeed in this by merely thumping and drumming.

We have been taught to consider the piano the most unresponsive of all musical instruments, yet when we view it intelligently we find it more responsive than any other instrument in affording a glimpse of that mysterious realm, a player's soul. It is only cold and mechanical when the man or woman who sits at the keyboard is a human automaton, with hammer-fingers and cold blood. Not only is it the musical instrument

of the day, it is the coming instrument, whose value and service we are only beginning dimly to surmise.

To those who have heard many performers it is interesting to note the individuality of each. Liszt was the prophet of the pianoforte. He made manifest possibilities in it not thought of before his time, and used it to imitate orchestral effects. True, in his effort, he pushed it beyond its legitimate sphere, and his followers actually slaughtered the instrument in their fierce demands on it. Chopin, with his wonderful, ethereal touch, was styled the poet of the piano. His best thoughts were expressed on it; he wrote for it with a view to what it could do. Thalberg, with his full, light, energetic touch and marvellous legato, was called the king of the piano in his day. His playing was characterized by aristocratic elegance, but it was cold.

Rubinstein was a master of the keyboard, whose individuality was so strong that everything he touched was impregnated with it. Critics have sometimes expressed themselves as saddened by his occasional tempestuous outbursts, that swept like some great elemental catastrophe over the keyboard. These gusts and caprices, like all else in his playing, were but indicative of a personality in which the great and good predominated, but whose emotionality was in excess of his self-control. At times, in his fury, he hit a wrong note, but, as some one has said, his wrong notes were better than the right ones of others, for, however strong his excitement, he always produced a musical tone.

Unmistakably he was a subjective player. Von Bülow, who died in Cairo, February 13, 1894, has been called an objective player. He was so classically correct in his phrasing, so true to the idea of each master whose works he performed, that he was a model for all students and teachers of the piano. Those who heard him during his first visit to America, in 1875-6, and again in 1889, will never forget what they learned from him, even though he did not fascinate, enthrall and inspire them as Rubinstein did. Von Bülow was not wholly an objective performer, however. Everything he played revealed the hard, inflexible, pedantic nature of the man. He was a pianist for pianists. His clear, logical brain accurately analyzed a composition, and he so dissected phrase after phrase, section after section, as to present a magnificent object lesson to his audience.

How about the brilliant Pole, Ignace Paderewski? That generous-hearted man expresses his whole nature in his piano playing. He feels deeply himself and compels his hearers to feel with him. His treatment of the pianoforte is unique; his handling of hackneyed passage-work so distinctive as to spiritualize it. Since the visit of Rubinstein to this country, more than a quarter of a century ago, no pianist has aroused so great and so widespread enthusiasm as he. His genius is not so transcendent as was that of Rubinstein, but he possesses, to a large degree, the scholarly self-control the age demands. It has been noted that with years the gifted Pole has gained in breadth and impetuosity, and that now in moments of excitement, when a climax is reached, he makes occasional slips, like his Russian predecessor. These slips evoke from the critic howls of wrath—or may it not be of joy at the revelation of weakness?—and show, as it has been wisely remarked, that added fire and passion have attendant disadvantages, which no temperamental artist escapes.

Paderewski has said that technique may be attained by hard work, but that touch is born in the artist. Nevertheless, his own course proves that he believes a musical touch may be cultivated. His ideals are lofty. As a boy he sat for hours before the piano, striking the same note over and over again, until he succeeded in making the strings so vibrate as to produce the exact quality of tone he had in mind.

Therein lies the solution of the touch problem. You cannot have a good touch unless you cultivate an inner sense of tone-color. There are countless ways of making the strings vibrate, and no two persons can do it precisely the same fashion, any more than they can speak alike, read alike or look alike. As no two hands are alike, that teacher is wise who permits his pupil's hands to assume their natural position at the keyboard. Beyond all else, it must be remembered that to produce a pure, noble, sonorous, poetic tone requires Herculean strength combined with lightness and great mental concentration.

All discordant elements are forgotten in the harmonies by which we are swayed.

THE MARVEL OF MUSIC.

All advance in power of thought is accompanied by an extension of the range of ideas which are apprehended almost automatically. At first even the simplest ideas afford sufficient material for thought and require complete attention for their understanding. The term unit of thought is only a figure of speech, yet it may serve to indicate a relatively simple idea, and using the term in this sense it may be said that advance in intellect consists in increase of the comp'exity of what for the individual is a unit of thought.

To the child beginning to study music the attention needed to find the position of a single note on the pianoforte when the symbol is given in musical notation may well be excessive. It is not an unnecessary help to him to indicate its position on the stave to his unaccustomed eyes by type very much exaggerated in size beyond that which the skilled musician can read with ease. The child has to count each line painfully, and after finding the position of the note symbolized with reference to those lines, has to go through another difficult process in finding the position of that note on the keyboard. Gradually a few notes become better known than the others, and the naming of them becomes almost instantaneous, until, say, the whole of the notes on the treble clef are well known.

By this time the pupil has probably begun, without, however, consciously recognizing that he has done so, to read by relative position—to throw aside one stage in the early process of reading, and to produce notes without allowing the name of the note to occupy any place in consciousness. He has begun to allow relativity to count—and in doing so his unit of thought must necessarily have become extended. Even the skilled pianoforte player may find himself very much at a loss if he is suddenly presented with a high note represented by a symbol which is very much like a busy telegraph pole, though the same note, if it had been brought into relation with other notes, would have been easily apprehended. In all learning, great or small, the power of readily grasping the *relations* of things, and laying stress on them (rather than on the things themselves) is the mark of advance. Progress is from the concrete to the abstract. How many thousands of notes does the musician read without consciously following their names. His childhood's painful plodding when thought progressed with glacier-like rapidity, was, however, the means of relegating whole processes to such an inferior position that he does not recognize them as conscious. It is not a note which is his unit, nor a chord, however complicated, but a portion or the whole of a bar, perhaps even a group of bars which he apprehends at a glance.

How infinitely more wonderful still is that inexplicable power of the master eye and the master mind which follows the meaning of the wilderness of notes in a complicated score. He grasps the essential features of a dozen parts. He is in a sense twelve performers thrown into one, so far as reading is concerned. What he does not read he knows may be trusted to itself. He sees, above all, the framework and all important details. The rest he rejects. He has become selective. And yet he would be alive to anything amiss in the non-selected matter. And again his appreciation extends over the three fields of time, tune and color. To the beginner, the time element might be considered as the sequence of relatively strong and weak notes. Gradually the unit extends to a bar, then to strong and weak bars and to alternating groups of bars. The symbols which are extended before him in *space* he translates into relations of time. This time is relative, and in addition to grouping those relations, he has the power of realizing the approximate absolute speed which will best suit the relative time of the music before him.

We are sometimes instructed in our youthful days to attend to "one thing at a time," and philosophers have wondered how many things could be grasped by the mind at once. The musician has indeed to attend to a hundred things, and the only way in which he has become able to do so is by special gift in comprehending the special matter of music, together with that long experience which has resulted in the quasi-automatic action of the mind. In all learning the same features may be observed, but they are more striking in the case of music, for the matter is complex and involves special appreciation of time, variety of pitch and color of tone. When we consider, too, that variety of pitch is dependent on vibration-frequency, and that the skilled musician would detect any very serious error in their incredibly rapid movements, we should, if the evidence to the contrary were not before us, have deemed that such power was superhuman.—*Musical News* (*London*).

So, great tone-master, strength and sweetness dwell in thee,
Close-knit in interwoven chain of harmony.
—*Bach—Z. Cocke.*

MUSICAL UNFOLDMENT.

FREDERIC W. BURRY.

It seems to be a recognized thing among a certain class of teachers that music instruction must be decidedly of the severe order before it can be thorough.

And this notion is fostered by the parents of students who insist, above all things, that the teacher be strict. When the teacher is engaged the solicitous mother says: "Now, you be sure to be strict with her and I'll see that she practices." And so is it any wonder that the pupil dislikes both lesson and practice?

All this is the outcome of the mistaken idea that music or any art or science is to be driven into one's mind from without, when in reality all talent and knowledge is something to be unfolded, as the flower is from the germ.

Before instruction can be made thorough; that is, before the student's consciousness can firmly grasp ideas, there must be a certain interest aroused.

All success, all achievement, is the result of concentration, and this is born of interest and attention. In this way, moreover, is memory strengthened, for the mind naturally holds and retains what it is interested in. Now this interest is not merely to be a passing amusement, but to some extent an entire awakening of the inner energies, for in all there are dominant possibilities, which are only waiting for a sympathetic touch, when they will be aroused to action.

This touch of sympathy finds expression in that simple quality we call tact. For all-round success the tactful teacher will always be in the lead. He will come in touch or contact with this pupil's temperament, his character, not only studying the various qualities of his pupil's individuality, but himself feeling the latter's peculiar needs.

So that music teaching may become a veritable uplifting and strengthening influence for both student and teacher; yes, both may share in the unfoldment which such a method of culture as here suggested would give.

Music is preeminently the fine art which may be said to express man's soul—his real being. The teacher's province is thus a wide one. To draw out from within the student's being, into the field of expression, the great soul-energies—this is the work of the teacher.

So-called magnetic or strong personalities are individuals who make themselves at one with those whom they have dealings with; in this way alone can there be cooperation and mutual recognition and help. The best tutor will be one who has not only mastered and teaches correct theory and technic, but whose character and bearing are in themselves inspirations, which will unfold the soul of a student, thus creating real art. For art is, first of all, the sincere and truthful expression of the emotions. To the extent a mode of portrayal expresses the finer, deeper feelings of man we may consider the same to be a truly fine art.

Expression, of course, demands the union of mechanical with the finer arts; but let the former always be looked upon as the agents of the latter and not be considered as the sole purpose in view. Technical dexterity alone does not make the piano artist. This is but one of the means. Never should any means be mistaken for the end. Even in the hours of practice, one should not forget what the true office of technical and all mechanical work is. Thus, there should be no mere thoughtless, desultory fingering of the keyboard; even gymnastics and all exercises should be played from one's soul-centre. Then they would at once become interesting; the thought of what great value they are in themselves, forming a background and framework for beautiful tone-pictures, will give one an impetus to master them.

Such thoughts as these need to be considered by teachers, students and parents; and then it will be realized by all concerned how very much more practical worth there is in kindness than in severity and in masterful indifference than strained, anxious activity; how essential it is that the aspiring artist and master express themselves at all times in keeping with the sacred art to which they minister.

Young Composer's Column.

RULES

1. MSS. marked "Young Composer's Column" must reach us by the 10th of the month to ensure notice in next issue.
2. Each MS. must bear the full name and address of the writer; the initials will be used unless a *nom de plume* is added.
3. Stamps must be enclosed if MS. is to be returned, but it is to be distinctly understood that the Publishers assume no responsibility for any MS.
4. No charge is made for the examination of any MS., and compositions of any nature may be submitted. The criticisms will be general and of such a nature as will be helpful to those honestly desiring frank and unbiased criticism.
5. No criticisms will be sent through the mail.

A. J. G.—(462-472). You send us eight Polonaises! To speak frankly, it seems to us a waste of time; not that your pieces are worthless or entirely uninteresting; on the contrary you have some pleasant melodies here and there. On the whole, however, the effect is not worth the time you must have expended. Have you no desire to write in a better style? In the style of a Mendelssohn Song Without Words (say like Nos 3, or 16, or 30) or that of a Chopin E flat or F minor Nocturne? Your pieces are not tuneful enough to sell nor good enough from the formal standpoint to endure until they can make friends. Barcarolle is a pleasant little piece; Rondo is an etude of some usefulness.

C. B.—(473). Your Valse is sprightly and has a Coda to recommend it; young composers very often write Valses, but seldom make Codas for them! Your first chromatic theme gets rather tiresome before we hear the last of it; you must admit that it is not a tuneful theme. You make errors in notation; p. 1, m. 3, line 6, D♭ should be written C♯—there are others. We do not like the bare fifth formed at the beginning of your chromatic theme between C♯ and F♯.

J. E. B.—(474). Your little daughter has also written a valse and it is not without interesting hints at future success in composition.

D. W. K.—(475). We are much interested in what you write about yourself; send the Berceuse and let us see what else you have to say. Yes, you make a good many errors in notation; don't you think you ought to study theory? Surely school lessons can not be so difficult that a course in Harmony can not be worked in. And, after all, to say as you do that you have done so and so, and have written some music without knowing the elementary rules of musical grammar is something to regret. We think we discern something worth while in you; study, *study*.

O. K.—(477-479). The Andante is much the best of the three pieces. Waltz and "Vesper Musings" are just about the sort of thing you hear in the theatre before the curtain rises; they are fairly correct, have good harmony and are easy, somewhat ordinary melody. Extend your borders; study good music—music by classical composers—and use them for models.

V. W. B.—(476). We have looked out your town on the map and feel immensely flattered that you have sent your Berceuse thousands of miles for us to see. Your MSS, like those by A. J. G. are exquisitely neat. The themes of your piece are good and the effect of the whole is distinctly refined and musical. We think, though, that the Berceuse is monotonous; you make too little contrast between your first and second parts; there are some awkward places to play, for instance, p. 1, meas. 13.

Student.—By "well-worn progression" we mean a progression that has been used so much that it is worn out; hackneyed. Have you ever used Banister's book on harmonizing melodies, published by the Hatch Music Co.? If you are away from teachers remember that you always have the best of teachers at your door, the Great Masters. Study their easier, earlier compositions; see how they treat the passages that trouble you. You will have to examine a good deal of music and much of it will either bewilder you by its complexity or seem to be un-illustrative of, or not germane to, your purpose; you must persevere; summarize your observations, deduce general principles. Write us again.

Compositions by E. N., R. C. W., and H. W. are held over.

WHERE VIOLINS ARE MADE.

In the village of Mittenwald, in the heart of the Bavarian highlands, live the men who manufacture the greater part of the world's supply of violins. Mittenwald has taken the place of Cremona, although it may take another 200 years before its violins can be mentioned in the same breath with those of the famous Italian town.

Of the 1,800 inhabitants of the village, over 800 are exclusively occupied in the manufacture of violins, and the output reaches the incredible figure of 50,000 per annum. They are exported to all countries in the world, the better instruments going to England and America. One organization of makers alone exports 15,000. Each family of violin makers has its own particular trade secret, a sort of trick of the trade, handed down from father to son. Outsiders and, still more, rival makers are not permitted into a workshop that is not theirs. The people of Mittenwald have an interesting violin school where the village boys are instructed in the general technical departments of violin building. In the hall of this building is an inscription to the following effect: "The object of this school is to instruct the scholars accepted in its various arts connected with the manufacture of stringed instruments, and to educate them as capable violin makers."

The course lasts three years and embraces, in addition, the art of drawing, singing and playing on the violin. In the building of a violin much is left to the individuality of the builders. It is seldom that two violins are exactly alike in every particular. The villagers of Mittenwald are generally of opinion that the varnish with which the instrument is covered is of the first importance, and attribute the fine tone of the violins made by Stradivarius, Guarnerius and others to a secret of varnish which has evidently been lost forever. Mittenwald uses maple wood for its violins, brought from the distant forests of Dalmatia and Bosnia, and pine wood of a certain quality and resinousness found only in the neighboring forests. The old-looking violins seen in many a music shop window are not infrequently brand new instruments from Mittenwald. The blackness and shabbiness, the rubs and scratches, the Italian names of makers inside, and the picturesque date—let us say of 1743—are often the work of the ingenious fiddle makers of this remote idyllic village in Bavaria. "We must supply the market," they say, in extenuation of this class of business; "if we do not, some one else will."

TAMAGNO GETS A REBUFF.

Ernesto Tamagno, like many other distinguished singers, is noted for his prudence in financial matters and during his stay in this country many amusing stories were told of his small economies which were remarkable in the case of an artist who has always received enormous compensation for his services.

That his spirit for bargaining is not altogether confined to money matters has recently been shown in a fashion that has put the tenor into an embarrassing position in Paris. He went there on his way to London, where he is singing at Covent Garden, to take part in the performance at the Opera given in honor of the retirement of Mme. Laurent, an actress of melodrama who has been for several years at the head of the orphanage for the children of French actors and has been decorated by the Government for her efforts in this field with the cross of the Legion of Honor.

All the noted French actors and singers were delighted to take part. Even Mme. Patti, who was in Paris when the plan was proposed, said she would take the role of *Juliette* in the third act of Gounod's opera. Signor Tamagno said that he would sing in honor of Mme. Laurent.

But it appears that his passion for bargaining proved too strong for him and he could not bring himself to give something for nothing. So he decided that as it would be out of the question to expect payment in money on such an occasion, he would suggest the Legion of Honor as the appropriate reward for his services.

He adopted this course with the most unpleasant results. The suggestion was of course rejected by the singer's friends and President Loubet was so disgusted by the affair that he refused to attend the performance. The tenor also declined to take part as his suggestion that he would like the decoration was received with so little courtesy. The result of the matter was that he left Paris vowing that he would never return. The feeling over the affair is such that he will in all probability never be asked to sing at the Opera under any circumstances.

Questions Answered.

[Under this heading THE MUSICIAN will be pleased to answer any questions submitted by its readers which may be of general interest. *All questions must be accompanied by the full name of the questioner.* Answers will be published without such names. Those who send questions should take care to state clearly what information is wanted. Only such questions as will be of interest to general readers will receive attention in this column. All others will be answered privately, for which purpose stamps should invariably be enclosed.—ED.]

Philon.—Handel is said to have written the "Messiah" in twenty-four days. The words were compiled by Chas. Jannens. It was finished September 12th, 1741, and first performed in Dublin, on April 18th, 1742. The first English performance was in London, March 23d, 1749, nearly eight years after its completion.

C. P.—Iastian mode is but another name for the Ionian mode, the thirteenth—or as some writers have it, the eleventh—of the ecclesiastical modes. It corresponds to our scale of C major.

Ionus.—The term *all' antico* is Italian and means "in the ancient style."

Arco.—It is a rather strange coincident. Mozart wrote a pastoral operetta, when he was twelve years old, called Bastien et Bastienne. The opening subject is almost identical with the principal theme of Beethoven's Eroica Symphony, as will be seen from this example taken from Mozart's work:

M. K.—That *terrible* bug-bear to music students of the middle of the nineteenth century called the "Battle of Prague," was published at Berlin, in 1792, and in London, 1793. The original form had violin and 'cello parts *ad libitum*. It had a phenomenal success for upwards of fifty years.

H. F.—Those notes which are above the treble staff are *in alt.* Those in the octave above are *in altissimo.*

L. S.—Heimkehr aus der Fremde is the title of the operetta, by Mendelssohn, known in English as "The Son and Stranger." The most popular number is a a baritone solo, "I Am a Roamer." The work was written for a wedding anniversary of his parents.

Klein.—Claudis Monteverde, said to be the originator of this modern style of composition, was born 1568, at Cremona, and died 1643.

H. F. H.—Mutation stops are those which do not produce a sound agreeing with the name of the key which is struck, but either the major third or perfect fifth to it, as E or G when the C key is pressed down.

"Where should we be if the world were bereft of its idealists? They are few enough."—*Wakefield.*

"Great painters can make the richest decoration subordinate to a simple story. And the noblest instrumental execution is felt by true musical instinct to be more conspicuous in this humility and precision of restraint, than in its most consummate dexterity of separate achievement."—*Ruskin.* (Might well apply to literary composition in simplicity of design, etc.).

"His views of musical technicalities are most untechnical! The ideal, and the spiritual in the art alone, he fathomed; but is not that the Holy of Holies of the Temple? Technicalities have many able exponents, and these matters may be left in their care. The hidden meaning of Music, its inward powers, its educative influences, have very few; and, upon these subjects alone, are Ruskin's words of interest. No man has more fully realized the spiritual essence of art, or given such true expression to its possibilities. In his expression of this, the few will find help and education, but that such teaching can appeal to many is, of course, impossible. General interest, however, cannot be expected, for 'Real music of Doric eagerness, touched of old for the vales and rills while the still morn went out with sandals grey.'"—*Wakefield.*

THE STUDY OF A SONATA.

Beethoven's Op. 2, No. 3, in C.

DR HENRY G. HANCHETT.

NINTH ARTICLE—FORM AND STRUCTURE.

The measures of each distinct movement (counting the trio as one) are separately numbered. Place a number before each bar, single or double, in the order as printed, and without regard to the completeness of the measures.

In the first article of the present series a concise definition of a sonata was given in the following words: A Sonata is a composition in two or more movements, on of which, at least, must be a "Mozarta;" that being a movement consisting of three chapters, in the first and third of which are found two subjects, which in the first chapter are in different keys, in the third chapter are in the same key. Reasons were there given for the use of the word "Mozarta," in place of "Sonata-Piece" and some other terms. What shall be the forms of the remaining movements of a sonata is not considered essential—frequently we find two or three Mozartas, more frequently we find a rondo, but in a sense, the Mozarta is itself but a rondo of a specific form. In the sonata before us we have one Mozarta—the first movement—two Rondos—the Adagio and the Finale—and a Scherzo (practically a dance movement) in Aria form, binary if the Scherzo alone or the trio alone be considered, ternary if they be considered as one movement.

Commencing our examination with the trio, we find there a passage of eight measures, which returns at 18 and again at 34, but each time with changes in the last three measures. The remainder of the movement is made up of a passage occurring twice; 9–17, 25–33. The alternation of these two portions constitute the movement, and it is binary because there are but these two portions or sentences. The Scherzo is similarly constructed, but is much more elaborately developed. The essential thing to notice is that the first sentence, 1–17, returns at 41–57; but besides this we see not only the second sentence 18–41, but also a termination 57–67, which, however, contains no new ideas. The ternary form means that these two binary forms are given the order of Scherzo, Trio, Scherzo—three portions—the whole being concluded with a Coda.

The essential feature of a Rondo is that there is a principal theme which returns at least twice, the recurrences being separated by other material of various patterns. The Adagio of our sonata answers this description, although with some license, which, however, does not in the least obscure the themes. Measures 1 to the first melody note of 11, returns at 43, and again at 67, the first time without change except in the last note, and the second time with a number of variations. The intervening matter presents two ideas, 11–18 and 19–24. These ideas are used repeatedly, with some changes of key. Then there is a coda, 77–82. The other Rondo, the Finale of the sonata, opens with a passage of about three measures having a single preliminary and another concluding note, which reappears at 20, at 70, at 182, at 208, and 260. At 20, at 208, and at 260, after the repetition of the three measures, the device as announced in opening the movement is abandoned, but at 70 the reproduction include all up to measure 9, first beat; while at 182 the reproduction includes all up to measure 22, with the addition of a sort of parenthesis from the last beat of 189 to the first of 197. Moreover, following this reproduction, we have presently a reproduction of the measures 30 to the first beat of 40, only at 218 *et seq.*, they are in the principal key of the movement, C, while at 30 they are in the key of the dominant, G.

Now the essential thing about a first subject is that it shall recur exactly as at first written. What does so recur may be considered as the subject, what does not so recur must be described by another name. The essential thing about a second subject is that it must occur in some other key than the tonic of the movement, and that it must recur in the tonic. The essential thing about a Rondo is that its subject (it need have but one, but may have two) must recur not less than twice, appearing thus not less than three times. The essentials of a Mozarta are given in the first paragraph above. It is quite possible then for the critics to take different views of this movement. One may say that the first subject extends from 1 to 20, followed by a passage (20–30) leading to the second s bject (31–39). The development extends from 40 to 181, where the first subject returns (182–208) with the passage (208–218) and second subject (219–227) followed by a coda 228 to the end. The chief objection to this view is that it does not give clear chapter boundaries, and it does not allow sufficient importance to the subject suggestions at 70 and 260. It should be explained here that the Chapters of a Mozarta are: I. Exposition, extending to the double bar, if there is one, or to some clearly defined cadence in the key of the second subject, and occurring at or soon after the conclusion of the second subject. II. Development, extending to the reappearance of the first subject, and III. Recapitulation, extending usually to the end of the movement, but sometimes to the beginning of a chapter. IV. Reminiscence. In a Rondo, the first chapter concludes with the second announcement of the first subject, all the subsequent announcements of that subject terminating subsequent chapters, except that the last chapter includes the last appearance of the first subject and all that follows it to the end of the movement.

Another analysis of this movement would consider measures 1 to 9, first beat, to be the first subject, the first chapter ending at 77, the second at 189, and the third continuing through the movement. This plan ignores the recurrences at 20, 208 and 260 as partial or incomplete subject suggestions. Still another view would make the subject end with the first beat of 5, the first chapter end with the first beat of 23, the second with 73, the third with 185, the fourth with 211, the fifth at the end of the movement. This is more consistent with the definitions but it makes four chapters end with discords. There should be a better plan than any of these.

Art is free; its aim is Expression. It is full of life and it grows and enlarges by the contributions of its devotees. The purpose of analysis is not to build fences, to restrain invention or activity. It is to quicken the perceptions of the student and give him clearer views of the methods of the masters. For purposes of study we must have a terminology and definitions, but let us make them elastic, and modify them as the necessities of the case require and never think that genius must conform to our limitations. Let us name that the Subject Proper, which recurs in accordance with the formula of the movement, and let us call that the Enlarged or Developed Subject which includes the Subject Proper and is part and parcel with it, but which is not always fully reproduced. Then we can analyze this movement thus: First Subject Proper, 1–5, first beat; Enlarged Subject, 1–9, first beat; Auxiliary Theme, 9–19; first return of First Subject, developed, 20–30 first beat, where ends Chapter I. Second Subject Proper, 31–40, first beat; Second Subject Enlarged, 31–64, first beat; Eingang, 64–69; second return of First Subject, 70–77, first beat and end of second chapter. Development Group, 77–103; Episode, 104–168; Eingang, 168–181; third return of First Subject, 182–197, where ends Chapter III. Return of Auxiliary Theme at 197; fourth return of First Subject, 208; end of Chapter IV at 218. Return of Second Subject, 219; Eingang, 254; fifth return of First Subject, 260, and Coda 266 to the end where concludes Chapter V.

Turning now to the first movement it is readily seen to be a Mozarta, the second chapter beginning with 91, and the third with 140. The First Subject ends in 8 on the third beat, but in Chapter I we have an Enlarged First Subject ending with the first note of 13. In Chapter III, the First Subject ends with the third beat of 147. The Second Subject is 27–77; in Chapter III, 162–212. Some authorities would begin it in 47, because here the key is G major, the dominant of the key of the first subject, but the question is: How much is reproduced in Chapter III with transposition a fifth lower to tonic? The answer would be: All up to the middle of 83, and a good conclusion for the subject might be found in 81. But at the cadence of 77 there is a distinct division, what follows belonging to the conclusion or codetta, so that it seems more reasonable to limit the Second Subject as proposed. 13–26 constitutes the Passage; 91–139, the Development; 212 to the end, the Coda. There would be much to support the view, however, that 212 to 233 constituted the Cadenza (in the sense the word is used in describing a Concerto) and that a fourth Chapter of Reminiscence began at 234 with allusions to both subjects, and a Coda from 253.

It remains to glance hastily at the periodic structure of the composition. A period or sentence in music is marked by a perfect cadence closing a passage long enough to make what Mr. Mathews has wisely described as "complete sense." The periods in the first chapter of our sonata occur at 13, 26, 39, 47, 55, 77 and 90, always on the first beats of the measures named. A period might be written on the third beat of 8, but that would leave the passage in 8 to 13 with a distinct cadence at the end, but without sufficient length to form complete sense, and as this passage evidently belongs with what goes before it, it should belong in that and not in the following sentence. The same remark applies to 21. 21–25 do not make complete sense, yet they terminate a period; they therefore prevent the placing of a period at 21, although measures 13–20 are a satisfactory sentence. Such instances, Mr. Goodrich calls "Extended Periods."

In applying names to the subdivisions of a sentence it is occasionally necessary with an unusually long sentence to divide it into "half-sentences." The sonata before us presents no example of this kind. The longest usual portion of a sentence (and that occurring only occasionally in long sentences) is the strain, which is a passage within a sentence which makes complete sense, but yet does not include the entire period. Such a passage should be marked by a colon, and colons should be placed at the third beat of 8, the first beat of 21, and the first beat of 61. Many sentences require no sub-division into strains. The next smaller sub division is the clause, which Mr. Mathews neatly defines as a portion making sense, but not complete sense. It is true, Mr. Mathews does not use the word clause, but I trust the article immediately preceding this has made it sufficiently clear why the word *phrase* should never be used to indicate a part of a sentence. Clauses are indicated by semicolons and are rarely absent. Semicolons should be placed after 4, on the first beat of 11, on the first beat of 25, of 33, of 43, of 69, second beat of 73, and first beat of 85. The next smaller sub division is the section, indicated by the comma. Generally, but not always, the clause is made up of two or more sections; in the present case the first clause contains but one section; the second clause, however, divides into sections and a comma should be placed on the second beat of 7. Some might think a comma, instead of the semicolon, would be sufficient in measures 11 and 25. Other commas belong in 17, 31, 37, 41, 45, 51, 59, 65, 71, 76, 81, and 89, usually on the first beat or just before it. The smallest sub-division is the fragment—a term which I beg to suggest as a substitute for *motive* in this connection. A motive is a *germinal* fragment; a brief portion that contains elements out of which larger members are developed. Motives should be classified with subjects rather than with periods, yet it is true that a motive often coincides in length with a fragment. Fragments, however, are constantly present as component elements of sections, clauses and sentences; while motives are few. Let us call a germinal fragment a *motive*, if it used as such, but let us all call the smallest division of a sentence, as such, merely a fragment. Fragments are rarely more than two measures in length, often only one, but they are not to be defined in metric terms and they do not require a sign of punctuation. In the sonata before us the first fragment (which is also a motive) contains six beats, but occupies two measures. The second fragment closely resembles it, and the two are so striking and individual that together they constitute a clause, since they make sense, although not complete sense. The third and fourth fragments occupy five beats each, and together they make a section, while the next five beats constitute a section in themselves, completing the strain. The next two fragments seem to constitute a clause, but perhaps it would be better regarded a section, and measures 11 and 12 each constitute fragments, the two making a section and completing the period. 13 and 14 constitute a fragment, as do 15 and 16, the four measures making a section which is balanced by the next section of four measures, the eight completing a strain. By noting carefully the location of the remaining punctuation marks of the chapter, the student will observe the sense of the passages marked off, and should be able to continue the exercise throughout the entire sonata. In doing so, however, he should remember that more than one plan of sub division can be defended, and that the point is far more the careful grouping of the ideas set down by the composer with a view to giving them an intelligent and significant interpretation, than it is the demonstrating of any special formula of construction, or the proving that some other view of the matter is not correct. Let us have earnest, careful study, and as wide a comparison of results as possible, but let us yet allow for differences of opinion and strive always to make the utmost light and meaning break out of the works which we attempt to interpret.

THE MUSICIAN.

A Monthly Publication.

PUBLISHED BY
HATCH MUSIC COMPANY.

SUBSCRIPTION PRICE.

SINGLE COPY . . . . . $ 15
PER YEAR 1 50

Free of Postage in the United States, Canada and Mexico.
Foreign Postage, per Year, 72 Cents.

Remittances should be made by Bank Draft or Check, Post Office Money Order, or Express Money Order. *Where none of these can be procured*, money can be sent in a Registered Letter.

New Subscriptions can commence at any time during the year.

Discontinuances.—The publishers should be notified when a subscriber wishes his paper stopped. In the absence of written notice to the contrary, subscriptions will be continued.

Communications are Solicited from all interested in the teaching and study of music, and in furthering the success of THE MUSICIAN. All articles or communications intended for publication should be clearly written on one side (only) of the sheet. Those which cannot be used will be returned.

All Letters should be addressed and **Remittances** made payable to

HATCH MUSIC COMPANY,
Publishers of THE MUSICIAN,
Eighth and Locust Streets, PHILADELPHIA, PA.

The Publishers of THE MUSICIAN do a General Music and Music Publishing Business. They can supply anything in Music.

MUSICAL ATMOSPHERE.

"Musical Atmosphere" is a full sounding term, which musicians delight to use. Commonly used to designate elements or influences that, surrounding the musician, have more or less to do with his development, the expression may mean much or little, according to the understanding the user has of the conditions he refers to. We hear much of the excellence of European musical atmosphere and equally insistent deprecation of its lack in our benighted land. The plenitude of concerts, recitals and operatic performances, which offer their riches to students and musicians generally abroad, as expatiated on to the depreciation of like opportunities at home. The small cost of the foreign brand is also enlarged upon. The fact that there are some who say that in quality these concerts are not invariably commendable does not decrease the volume of praise.

●

Unquestionably, musical atmosphere is an important attribute of music life abroad. No one, who is at all informed, will attempt to controvert the fact that the multitude of concerts, with which the musical season of Europe is blessed, is one of its most commendable features; and the question of cost is an important one. But is there so great a lack of musical atmosphere at home? In the smaller towns, yes. In the more considerable towns and the cities, no. To Europe must be awarded the advantage when comparison is made between the little towns of the two countries. Good choral singing is a feature of German life which makes musical atmosphere. And choral singing is not at its best when it is entirely dependent upon the organization and maintenance of choral societies for its cultivation. It is the spontaneous nature of the song of Germany that perpetuates it and makes it strong enough to constitute an atmosphere. One of the signs of a lack of musical atmosphere is the strenuous effort which often is necessary to maintain and even organize choral or orchestral bodies. When, in musical art enterprises, great endeavor is the price of general interest, musical atmosphere is conspicuous for its absence.

●

Musical activities in America are plentiful. There are concerts, recitals, operatic performances in abundance. Artists—the greatest in the world—flock to our shores. Nowhere is there so much money made in music as in America. A roster of the artists who will visit us during the coming season would show a small army with its face turned Americaward. Boston, New York, Philadelphia, Pittsburg, Cincinnati, Chicago, and numerous smaller cities boast their symphony orchestras, and choral societies abound. Teachers in these cities get from four to six dollars an hour for their lessons. Prices higher than these are paid. In these cities there is a musical atmosphere, more attenuated, perhaps, than its foreign prototype, yet furnishing the breath of musical life to many earnest musicians. Why does it not extend to the smaller towns? It is increasing its area, but there are obstacles which cause its diffusion to be very slow.

●

This army of artists, full of the power which has come from communion with all that is best in music, comes to us not to diffuse the good it has gained, but to capture the good, solid dollars with which it believes our pockets to be lined. Prices are low in Europe, but the same artist comes high when he has crossed the Atlantic. The manager and the piano maker must reap their golden harvest, and between the three musical atmosphere can betake itself to any spot where it may have a chance to recover from the effects of a frost. American musical atmosphere will not be vitalized solely by the visits of artists, no matter how great they may be. It must be created and its density steadily increased to the proper point by ourselves. The atmosphere in which the music life thrives and grows strong will be the emanations from the activities of those whose purposeful lives are given to the cause they love. It is the leaven within that leavens the whole lump.

●

Very significant is the following which has for its caption "The Man from Ithaca":

"He can make other people do things. He has broad ideas, plenty of executive ability, is enthusiastic (but not beyond his power to accomplish), knows exactly the result he is after and secures it. He teaches music in the schools, leads the College Glee Club, makes music for one of the churches, loves a good horse (and appreciates it), and invites men from distant places of good repute to travel to his town and lecture.

"We went into the High School together. As we entered the room the students cheered him (one good mark on The Man's score). They sang well as a chorus. Tone, shading, meaning, all had been carefully worked out. The students were not vigorously "conducted." The Man stood aside quietly but occupied; the singing went on without fault or hesitation; if he spoke it was not loud, but everybody heard. Then ten or a dozen boys came out from among the several hundreds of students present and sang—as a club. And they sang delightfully. One of them was chorister. He knew how to do his duty. He watched The Man.

"Every child and every teacher in town is interested in music. Music books are on the supplementary reading list (another good mark on The Man's score). The superintendent is built on the cooperative plan—he and the music supervisor—that is The Man—work together. They value each other's judgment. Of course, the result of all this is worth traveling there, by way of Ithaca Junction, in the rain, to witness.

"In the evening of that day I heard the College Glee Club sing. They called it a rehearsal. I suppose that is the reason the boys were so much at home between the numbers. Again—as in the High School—there was a chorister. They sang ten or so songs, some with solos. Now and then, from headquarters, a word or repeat, or the chorister came forth for advice; but the man behind the singing, who was doing it all, seemed to be taking a vacation. He must have power in that direction, for it was twelve hours from entering the High School to departing from the Glee Club rehearsal.

"They may have it now in that town—I am not sure—but if they have not, they are capable of choral society to which large works would offer no insurmountable difficulty. The chorus would be constantly recruited from the High School.

"The Man would make it successful and the Little Town would have exceptional music."

This man is leaven, he is exhaling musical atmosphere; he is representative of the force that is to make the future of music in America. "He can make other people do things" is the secret of his power, as it may be the secret of the power of the humblest teacher whose eye lights upon this page.

●

Teachers, create your own atmosphere. Study music—not piano, singing, organ, fiddle or any other instrument—until you are filled with its influence. Read, read books about music and composers, play music, not solo only, but ensemble, gather about you a coterie of those who are interested and study music, then spread your knowledge abroad until your community feels your earnestness, cultivate the power to make others do things, and you will awake to the fact that you are breathing a musical atmosphere, which is stimulating your artistic life. If this man from Ithaca could be multiplied as many times as there are small towns in the country, a gale of musical atmosphere might be expected to sweep the length and breadth of the land. Were such activities as this plentiful choral societies would spring into existence everywhere. They would not necessarily be large; they would be made up of persons who have been drawn together by a common interest in getting good out of music, and they would sing for the sake of the music—this was what the Bethlehem chorus did—and by their singing they would influence their listeners for musical progress; for earnestness when united to capability is contagious.

●

Then the army of artists, which lands each season upon our shores, would be heard with greater discrimination and would feel a musical atmosphere that they have done little or nothing to create.

POWER.

All want power, therefore all seek power. But what is power? Power is a variant quality, and many there be who mistake it. Some consider authority to be power; some think it a thing to be acquired. Both are right—in a measure, but he who understands power to be the output of a personality that can be developed has arrived at the secret of all power. These other things are but manifestations of power. Power is within us and is dependent upon our treatment of ourselves.

●

What are your habits? Make notes of your living during a week. Mark what and how you think, when, where and how you *do*. Observe the tendencies of your mental habit; let none of the mannerisms which proclaim you as yourself escape your analysis. When you have searched out all these things, and have felt their force, do a sum in proportion. It can be stated thus: As these tendencies and habits are to your real self, so are you to the possibilities of your future. Now work it out.

PERSONALITY.

What is the pervading influence in your studio? Perhaps the room is beautifully fitted with artistic furniture. It may delight every sense of proportion and taste, but if one lingers in it or visits it regularly, what will be the impression made on him? Surely not one coming from inanimate furniture. The atmosphere of your room is permeated with that subtle essence, which is you, your real self, and yet of which, their is danger that you will be unconscious. Here lie the potentialities of success, the possibilities of failure. Which shall conquer? What story shall the very air of your room tell to those who visit it? Your personality will settle that point, and your personality can be cultivated. Every teacher, each student, holds within his grasp the essentials of success. To profit by them he must know himself and that is a knowledge which comes from much and long-continued study. What is your personality?

ISOLATION.

There is no isolation. No one is alone, while he has himself. He may be like Burdette's mean man, who was so very mean that when he sat alone on a log, he moved to the other end to get away from his mean company. We make our own isolation. And we people our world with the most interesting and helpful company. Our thoughts are friends, if we make them so. Our opportunities, our labors, our plans, our ideals, our books, are the liveliest company if we care to make them so. Surround yourself with them, get on intimate terms with them and learn how they will comfort, sustain and assist you. While you are teaching others, study and instruct yourself, and make much of your own stupendous possibilities.

HOW TO HANDLE PUPILS.

KARLETON HACKETT.

This means, How shall the teacher gain the confidence of his pupils and interest them in their work? Fundamentally, two conditions only are absolutely essential: that the teacher has something to impart and the pupil really desires to learn. With those teachers who assume that function merely because they see no other way of earning a livelihood, and those pupils who only go through the form of studying, we shall not concern ourselves, though the observation is pertinent, that the perfunctory teacher is responsible for nine-tenths of the careless and indifferent students.

It is very easy to "handle" any young, inquiring mind, provided you can show him that you know something that he does not, and that you desire to share with him your knowledge. It becomes a question of the earnestness and sincerity of the teacher. We have a vast deal talked and written about the charlatans of the music profession and the manner in which they wax rich and powerful by playing on the weaknesses of their pupils and putting into practice Barnum's famous dictum that "the public loves to be humbugged." But, on a closer examination, we totally dissent from this view, and hold with Lincoln, that "you can fool all the people some of the time, some of the people all the time, but you can't fool all the people all the time."

There are people who are always looking for short cuts, for new "methods" whereby they can do in one year the work of three, and such are, by poetic justice, the proper victims for the quacks; but that quackery is the road even to that lowest order of success, which is reckoned by the cash returns, is disposed of by logic and experience. Here and there may be noticed some striking example of quick and widespread popularity which other members of the profession may unite to denounce as charlatanism, but if this sudden success be not the legitimate result of superior capacity, the fact is quickly discovered by the intelligent pupils, the bubble bursts and the man finds his proper level. There is no evidence that in the teaching of music, more than in any other walk of life, success is won, except by solid merit and universal industry, and it is a fact worth noticing, that those who declaim most loudly about the baleful and widespread evils of empiricism, and that only quackery succeeds, are those in whom the world has refused to find any especial ability. But enough of quacks and quackery. We refuse to consider that music is the peculiar abiding place of the evils or to believe that the earnest, intelligent music teacher has anything to fear from the pretentions of ignorance. The strong man supports himself in any environment, the weak man falls from lack of vigor.

To handle a pupil is not primarily an art, nor is the pupil of such fragile texture that the least awkwardness is likely to break him, the first requisite in handling a pupil goes back to the teacher's early education and demands that he know something which is necessary to the pupil. When a man really knows anything he is always anxious to impart his information to others and in the most simple and direct manner, so that the first principle of handling pupils is the teacher's sincerity and conviction. All the arts by which pupils are entertained or flattered are useless and worse than useless to the strong man, for the pupils will study, no matter what treatment they receive, provided they feel that they are learning something, and it makes little difference how polished and refined the teacher may be, if the pupils do not feel that they progress they do not stay. In short, it comes to this, that when the teacher is in earnest in his work the last thing he thinks of is how to handle his pupils, he merely shows them how to do things that they could not do before, and they flock to him bringing all their friends and acquaintances.

The average pupil is quick enough to discern the main facts of life and character. If a girl comes to have her voice tried and after hearing her sing an ordinary ballad, in a commonplace manner, with a fair voice, the teacher goes into raptures, exclaims over the beauty of the voice, the musical feeling and the future in store for so much talent, he may prevail on that individual to study with him; but, sooner or later, there is a day of reckoning. By flattery and prevarication the girl may, for a time, be led to believe that she is making rapid progress towards the promised goal, but some day relatives, friends and the dispassionate public are to pass judgment on her attainments. As the appointed time draws near this teacher's position is far from enviable, such success as his is but as a house of cards, to be overblown with a breath. It is not true that the average pupil is a fool to be won only by flattery, for in the majority of cases each one is really looking for information, each asks honestly whether or not his voice is worth cultivation, and while of course the teacher's judgment is fallible, an honest answer is appreciated.

In one view, teaching music can be likened to any other form of commercial transactions, the returning of an equivalent for value received. As has been said, there are two ways of conducting business; by one plan the merchant seeks to give such value that each customer becomes a friend and brings by his good reports many of his friends to buy; by the others the merchant feels that he never will sell this particular individual but one bill of goods and therefore robs him, as far as the law will allow, trusting to the aphorism of pessimism, that "there is a new fool born every minute," to furnish material for the future. But the teacher's main stock in trade is his reputation, and each pupil with whom he works is adding his mite either on the right side or on the wrong. In the long run honest work, conservative statement and good results make a reputation that can only be injured by the teacher himself, and that is to be won only in one way.

When the teacher knows that certain conditions must be established, if the pupil is ever to attain the desired results, it is his business to insist on these essentials, whether the pupils realizes the necessity and likes the process or not. If the pupil does not trust the teacher's knowledge and will not yield to his instruction, then the only thing is for them to separate, for under such circumstances the pupil neither gains knowledge nor the teacher reputation. On a vital point it is difficult to believe that an earnest teacher and pupil cannot understand each other, one or the other must be wilfully at fault, but in any case once the band of sympathy is broken they can no longer work together with advantage. The only essential condition in the relation of teacher and pupil comes from the feeling of respect that a younger person always feels for an elder who knows more than he does. This is that band, firmer than iron, which unites the intelligent pupil to the earnest teacher. When this is present nothing else is necessary; when this has lost its vigor then all else is worthless. The only thing of inherent value in this world is the respect paid to superior knowledge. He who has that has all else, he who lacks it, is like an arch without the keystone.

Once the confidence of the pupil be won the rest is simple. When two earnest people are working together for a common object they agree without conscious effort, and the relation between pupil and teacher should always be that of two friends interested in the pursuit of some vital question. Let the teacher assume a cold or distant attitude or try to impress the pupil with his importance and a barrier insensibly grows up between the two. Treat a pupil with frankness and simplicity; show him that you can and will impart to him the knowledge that he seeks, and the most lasting of friendship is formed, that founded on mutual esteem and benefit.

The pupil quickly recognizes in the teacher superior capacity and is apt to be justly suspicious of those little acts of flattery, so often miscalled "tact," whereby some teachers seek to bind their pupils more close to them. The only "tact" necessary is that of honesty, the only "art" essential is that the teacher thoroughly understand his profession and prove it to the pupil by his progress. The art of handling a pupil amounts simply to this, that the teacher understands his profession and in the most straightforward manner sets about doing for the pupil those things of which he stands in need. Ability, earnestness and simplicity are the foundation of the teacher's power, and these the pupil always recognizes and respects.

"The first great principle we have to hold by in dealing with the matter is, that the end of Art is not to *amuse*; and that all Art which proposes amusement as its end, or which is sought for to that end, must be of an inferior, and is probably of a harmful class. The end of Art is as serious as that of other beautiful things—of the blue sky, and the green grass, and the clouds, and the dew. They are either useless, or they are of much deeper function than giving amusement."—*Cestus of Aglaia VIII, p. 528.*

STRAY THOUGHTS.

FRANCES C. ROBINSON.

The title of Charles Reade's novel, "Put Yourself in His Place," appeals to me as a good text on which to found a few words for the consideration of teachers. There are times when it becomes necessary, and has a very wholesome effect, for a teacher to put herself in the pupil's place and to endeavor to see herself as she appears to the child or youth whom she is undertaking to instruct. Sometimes the quiet, thoughtful, serious mood of an adult seems something very different to young persons. I have known a teacher to be described by a child as "cross," when she had simply tried to appeal to a careless, thoughtless pupil by means of an earnest, kindly talk. The child was not aware of misrepresenting or misjudging, he was perfectly sincere in his belief.

I have found it interesting, and oftentimes very amusing, to get at the impressions and criticisms of children, which they have formed regarding adults. While children are sometimes very acute and correct in their observations and impressions, they frequently form very erroneous opinions. It is a duty of parents and teachers to discover these ideas as much as possible and to endeavor to assist children to more correct understanding and appreciation of grown people. The relationship between teacher and pupil must be friendly if desired results are to be obtained in any course of study. It is my experience that children easily and gladly reform their opinions, remodel their judgments, when subjected to the right influence in their home-life, as well as with the teacher, and when assisted to see matters *as they really are*. We can thus assist them by putting ourselves in the child's place, as it were, and looking at persons (including ourselves) and at actions and conversations from the child's point of view. If a teacher really lacks self-control she must expect to lose not only the regard but the respect of her pupils. It is most desirable that children may look upon their teacher as their friend and helper.

On the Use of Studies.

It is well known that progressive music teachers no longer follow the old-fashioned way of going through a prescribed round of exercises and studies with each pupil. Many teachers are discarding studies altogether. To the writer this seems a mistake and but the going from one extreme to another. I do not advise or approve of a prescribed course—the same for every pupil—but neither do I approve of the entire discarding of studies, and for this reason: Some pupils have physical defects to overcome, which certain studies can assist them to do, while others have a deficient mental conception of phrasing, melody or expression which may be corrected by a certain class of studies. With some pupils possessing these defects, studies might not be necessary, if they were willing, when advised to do so, to practice the difficulties in a piece of music, separately and thoroughly, but for those other pupils who, despite advice and warning, will persist in practicing (?) a piece by commencing at the beginning and rushing through to the end, studies are a necessity. Such pupils require fastening down to each difficulty by itself, and this can be done by a proper selection of studies. My decision, then, is not to use studies simply because past teachers used them, or simply because a certain course should be followed, but to use them when necessary and advisable, in certain cases, and *to know why* I use them. Strictly individual training is necessary for each pupil and the only right course.

The Damper Pedal.

1. Encourage beginners to experiment in using the pedal. No greater mistake is made than the forbidding its use by all such. Show them some of the effects, in tone, which can be produced by its use, and encourage them to try the same at home and to show you, at next lesson, what they can do.

2. Mark the pedalling for your pupils as carefully as you do fingering and phrasing. Erase all erroneous printed pedaling.

3. Avoid giving rules about pedaling in single instances. Rather, study each case as it arises, and as different cases arise make your suggestions and give the required rules.

4 Study Hans Schmidtt's book on "The Pedals of the Pianoforte" and make use of his advice, as stated in his resumé, on pages 95, 96, 97 and 98. Mr. Arthur Foote, the eminent teacher and composer, has also written ably upon the subject of pianoforte pedals and composed or arranged some excellent pedal studies.

THE NEW EDUCATION.

FOREWORD.

The *New Education* offers its readers, for 1900-1901, the best plan for a year's study that it has yet presented. It will be the best in two particulars: In choice of subject matter and in manner of presentation. The hearty reception which this novel educational feature has met with makes it possible for THE MUSICIAN to continue to develop the idea of home music study and to offer the best advantages that are to be attained in this manner.

The series of subjects for the coming year follows. Each subject is in the hands of a specialist and will be treated practically and as fully as possible in twelve lessons. In order to meet the immediate demands of students who seek information on special points in the work, the editors will be glad to furnish

Suggestions for the further study of any subject.
A bibliography of any subject.
Information on any question in the lessons.
The consideration, and, if necessary, the presentation, or general discussion of any point that comes up in actual teaching.

The subjects for the coming year are as follows:

I. Advanced History of Music; twelve lessons, with suggested reading.
II. Psychology and Pedagogy of Music; six lessons in each subject; suggested reading.
III. Advanced Music Form; twelve lessons developing those already given in this department.
IV. Harmony and Melody; twelve lessons; six in each topic.
V. The Literature of Aesthetics and Criticism in Music, twelve lessons.
VI. The History and Development of the Piano, twelve lessons with illustrations.

The following conditions *must be observed:*

1. Address all communications for the *New Education* department, thus: THE MUSICIAN, New Education Department, 8th and Locust Streets, Philadelphia, Pa.
2. *Do* NOT *roll your manuscript.*
3. The answers for each month must be sent as soon after the issue of the journal containing the subject to which they relate as possible, and before the next succeeding issue. No papers are to be held until end of course. New members can join at any time by sending names and answering questions contained in current issue.
4. The editors are obliged to say that no papers will be read or rated that fail to comply with conditions 3, 4, 5 and 6
5. No two subjects should be written on one sheet. All sheets pertaining to one subject—for example, History—should be independently fastened.

Ratings will be largely influenced by the following points:

Accuracy.
Clear, concise, yet smooth diction.
Grasp of the subject.
Originality of thought and statement.

The questions following each lesson have two purposes: First, to connect the reader's mind directly with the text—the most fundamental, that is, the lowest duty a question can serve, but necessary. Second, to suggest a thought beyond the mere expression of the words in the text; the highest purpose a question can serve. The first is by far the least useful if he has a memory; the second the most useful if he has a reasoning faculty.

The editors will welcome letters from teachers which contain:

a. Suggestions as to what will make this department more valuable, the suggestion being dictated by the teacher's individual experience.
b. Statements regarding the application of this work with pupils as well as in one's own effort to secure a broader education.
c. If there is any line of thought of practical value to you, and likely to be equally practical to others, let us know it.
d. All such suggestions must be sent to the office of THE MUSICIAN, addressed according to direction given in regulations.

[NOTE.—*New Education* students are specially requested to avoid enclosing *anything* relating to their business with the Hatch Music Company with their *New Education* papers. The failure to comply with this rule causes great trouble. Kindly keep this matter in mind. We wish to call the attention of our students to the necessity of *fully prepaying postage on their papers.* We have been compelled to pay additional postage on a large number of those already received. This should not be, hence we request our students to take care that sufficient amount of stamps be affixed before mailing.]

THE FUTURE OF MUSIC.

PERCY GOETSCHIUS, MUS. DOC.

Any reflections concerning the future of our art must, necessarily, partake largely of the nature of conjecture. But by careful comparison of the epochs, and of the phases through which the art has passed, it is not impossible or even difficult for the unprejudiced historian to forecast the lines that are foreshadowed by the present, and to determine the general direction of future development.

All history, civil and scientific, teaches us that there is no standing still; and while we have mysterious indications of arts lost, in dark ages long past, it seems scarcely possible that such a fate could overtake any of our modern acquisitions, in the present condition of world-wide civilization and universal scientific knowledge. As far back as the light of history illumines the past, we see no actual and permanent retrograde; each epoch is seen to be a stepping-stone to the next and higher epoch—apparent phases of inactivity or degeneration are but temporary—just as the landscape descends from one hill but to prepare for the next ascent, and the summits are of unequal heighth. But the course of our terrestrial journey is ever upward. No epoch in the growth and upward progress of an art has ever yet proven to be the last and highest, from which no further advance was possible. So in our music art. Bach, the loftiest summit visible for centuries, did not terminate the mountain range. Beethoven was not the last great master. Wagner may not hope that he has consummated the aims of highest art-purpose; nor has Brahms written "finis" to the book of music art. These illustrious minds, each in turn, raised us to an eminence from which we might behold the next summit, to which, in the fulness of time, we should again be led by the guide who possessed the power to scale its heighths.

First of all, then, we need harbor no fear of the threatening whispers (precisely as common in these days as in all the days of the past) that predict the degeneration of the art of music. The road, to be sure, is not straightforward—nature, as a rule, seems to abhor the straight line—there shall be deviations from the narrow way of most steady and genuine artistic advance, momentary retreats and much quenching of promising lights. But as long as the earth endures, and humanity maintains its established character, just so long shall the quiet, general onward movement continue. The music of the next century will *surely* be richer, and stronger, and truer than that of to-day. What does it signify that Wagner repudiates the traditional ideas of "Form," uses the chromatic progressions so constantly, and adopts a less obviously tuneful style of melody? And that Rich. Strauss (and others) multiply dissonances until we seem unable to distinguish what we are hearing? That the French (and others) wilfully reverse the recognized dictates of natural melody? That the Russians set the element of harmony above that of melody; and that so many of our younger composers suffer St. Vitus torments of rhythm? Not one of these apostles of an experimental faith is able—not with legions of followers—to establish his view, unless it be the true and right one; the natural, and *therefore*, the enduring one.

For above all these individual doctrines towers the spirit of popular judgment, the *vox populi* which is truly the *vox dei;* the spirit that serenely, without passion or prejudice, almost unconsciously, weighs the new ideas as they arise, and compares them with its own unerring instinct of natural law and truth; the mentor who begrudges no one his pastime and listens curiously to each one's story, but promptly quells any real mischief, and withers the lie with one ray of his divine light.

If it is truly best for the promotion of the music art to infuse a greater proportion of dissonance into it than was hitherto the custom, it will surely come to pass, through the agency of willing hands. But if not—if this leads us farther away from the purest ideal of art—not a million eager hands shall ever force the issue; and some of the works of to-day will then soon become interesting museum objects of musical curiosity.

One thing is certain: It is excess that defeats all lasting success. Excess of consonance is as hopel as extreme dissonance. The line of genuine progr in any art runs along the golden middle way. I beli that the coming art will be more highly dissonat and that its rhythms will be far more diversified a more vital. But it will never become *all* dissonan nor will unity or rhythmic effect ever be lost; the sp of popular judgment will look out for that. I do b believe that the present laws of melody will ever successfully disregarded, for they are grounded natural science; there are still vast unexplored p tions of this field, but I am convinced that there no new "fields," or undiscovered laws of melo The rhythmic question is quite another thing, a probably still awaits a fuller solution.

To foretell which is the coming musical nation, beyond any one's prophetic power, though we are wholly without significant indications. Germany see to have had her day, and the palm is not unlikely pass into other hands. I say "seems," for it may that this nation is simply suffering a temporary pr tration from recent excesses, and that the manif conditions favorable to sturdy musical growth, again prove their presence among this people and g birth to a new "master." It seems impossible t America or England possesses *yet* the necessary s France apparently never had it and shows no signs ever gaining it. The musical soil of Italy is too shall and its exponents are prone to excess of melody. Russia, and other Slavonian nations? These peo are unquestionably rich in musical endowment; a the element of thorough scientific training, whose la has hitherto defeated truly great achievements, is th being cultivated at present as no where else in world. The ultimate fusion of these conditions m generate the life of a new and glorious era of mus If not, it will be because the Slav is inferior to German in that wealth of heart, of broad hum sympathy, out of which, after all, the truest and holi song has always emerged and forever will break for

MUSIC FORM—TWELFTH LESSON.

Concluding Article

THOMAS TAPPER.

There are two distinct kinds of knowledge ab Music Form, (1) that which comes from the exclus study of books and (2) that which, properly prepa for, results from the study of music itself. And student may profitably remember that music itsel the country in which the writer on Form must wan to, in order to give even a semblance of life to his te

Again there is a view of the subject which is t fold. With his knowledge of Music Form the stud may recognize structure. (1) By the perusal of music page with the eye. (2) By following its outli by the ear.

It is, of course, needless to point out to the thoug ful reader that only the ear-recognition of Form reliable and practical. All training must make that kind of skill; all practice must keep that appli tion of it in action. Hence, in this series of Fo lessons, I have urged that the teacher gather her pup together and give the lessons on the basis of ear-t Having explained the Phrase, test the class by play Phrases on the piano until they are as distinct as a other object in the field of consciousness. So proce with the Period, remembering that as one advan the unit becomes more complex, and progress necessarily, slower. Indeed the measure of progr may be inferred by this: A year's work which bri a careful student to the stage of advancement wh he recognizes Phrases, Periods and the Three P Form (Ternary) in its regular and irregular varieti has accomplished a great amount. With that mu knowledge won by ear-practice, supplemented explanatory matter on the teacher's part, a stud may profitably take up for study the chapters in Bu ler's Manual of Musical Form inclosed in pages 4 103. And this may immediately be followed by complete text of Dr. P. Goetschius, The Homopho Forms, the most complete treatise we have on subject.

Text books on Music Form are not many and f evince the thoroughness of structure which perm the student to find them an ever present help. T learner may travel a long way in the subject with other book-companion than the two above mention

But, valuable as books on this subject may be, t are almost useless unless accompanied by the ma

hich made them possible to their authors, and that atter is music. The student of the first year or two ould possess a few of the simpler pieces in primary rm, as well as some classic examples. Gurlitt has ritten (Litolff Edition) many pieces of the best sort, p. 197, 198, 101, 172. Further, one should possess e Op. 68 of Schumann, the Songs Without Words Mendelssohn, the Bagatelles of Beethoven, the asier Chopin Preludes, all the short movements lenuet's and the like) in the Haydn and Mozart onatas; later on, the same movements in the Beetoven Sonatas. The piano teacher will find that early all the instructive music written for the First, econd and Third Grades is in primary form, or may , it is a group of Primary Forms strung together for e sake of length; still retaining the simplicity of the nall unit.

The student who takes exceptional interest in his ork will soon discover that, next to the habit of arning (I mean, of course, next *above* the habit of arning), is that of thinking upon the matter learned. he study music so well that he knows it within, and in pass over it time and again in his thoughts, he will nd then—and really never before—the suggestiveness f its structure. Really it is only that which we are iasters of away from books and things that we know. 'e own it when it becomes (in our thoughts), disenaged from the matter which gave it b rth. And to lustrate this, I have found no better text book for the se of medium grade pupils in the subject than that on in this manner: They have studied the text ooks, learned the various lessons, made very many nalyses, and then carefully memorized from the point f view of Form structure, the first volume of the eethoven Sonatas, or even the first ten Sonatas.

There is in that bit of mental property more Music orm reality than is to be discovered and acquired in ny other way.

HARMONY AND MELODY.

A Resume.

DR. H. A. CLARKE.

At the suggestion of that potent individual, the ditor, this, the concluding article of this series, is to e a recapitulation of the various points touched upon n the preceding essays. In the essays treating of Harmony, we began with a discourse on the purpose f Harmony in the education of the student, in which 'Harmony" was compared with the study of grammar, it being as necessary to the right understanding f music as the other is to the right understanding of anguage. A knowledge of the construction of music eightens immeasurably the pleasure to be derived rom it, as it adds to the merely emotional and intelectual element. It also refines the taste if good nodels are studied. Musicians are never tired of admiring the effect Mozart produces with the simplest means, which are always so disposed that the least addition or alteration mars the effect. This general survey of the subject was followed by a sketch of the way in which harmony is supposed to have arisen. Its progress was hampered for many centuries by the mathematicians, who claimed music as their especial field, and wrote ponderous and acrimonious volumes about the division of the monochord and the differences between a diesis and a limma, or whether the greater or the lesser tone should come first in the tetrachord. Harmony worthy of the name began when the third and sixth were admitted to the group of consonance, and it became possible to hear a common chord.

The attempts to apply harmony to the church scales soon resulted in the discovery that they were incapable of it, unless they were treated as being parts of a major or minor scale, as modern organists treat them. When it was observed that chords consisted of superimposed thirds, it was an easy step to the chord of the seventh by adding another third, thus pointing out the direction in which further progress was to be made. When the principles of harmony were firmly settled, the system of shorthand, known as figured bass, was devised and has held its own to the present time in the estimation of the "Conservatures," who decry the possibility of learning harmony without it. In our time, the practice is rapidly growing of teaching harmony with the melody as a starting point. This any candid-minded person must admit to be the natural starting point, since melody always comes before harmony. The chief advantage of this method is, that the student always has the choice of several ways of treating each note, and if he has any music in him, he soon finds out the best way, which, if he cannot find, he has surely mistaken his vocation.

One of the most important branches of harmony, *viz.*, modulation, is next treated. Reasons are given for adopting two terms, restricting modulation, to signify going into a related key and using "transition" to signify getting among a new set of relations, thus, if from C, we go to F, G, A minor, D minor or E minor, it is a modulation, but if we go to E♭, it is a transition. It should never be forgotten that the key to all transitions is the relationship of keys. The student should so familiarize himself with the six that form a related group that the mention of any given key will at once call up its relatives.

The next paper is an attempt to institute a parallel between "chords" and "words," but the student is carefully warned against putting any hard and fast construction on the remarks therein made, because there are so many elements that enter into the expression of a chord, such as, loud, soft, high, low, slow or rapid motion, or what comes before and what follows. It is to this protean character of the chords that the exhaustless variety of music is owing—if the meaning of every chord was fixed and unchangeable, music would have become a "finished product" long ago.

Concerning the major scale, it is impossible for a modern to put himself in the position of Greek or early Christian, to whom harmony was unknown, and melody was the whole of music. When we listen to a Ionian melody, it sounds like an incomplete melody in the key of C, because all its notes belong to that scale, but doubtless it proved satisfactory and conclusive to these early hearers, who knew nothing of tonic or dominant chords or leading note. One of the chief elements of beauty in modern melody is, that every note in it proclaims its relation to every other note, and the impossibility of its finding rest anywhere but on the tonic.

The subject of melody is—we were going to say—the most insoluble puzzle in music, where every thing is insoluble. There is not one thing that may be called an essential of good melody if this claim is made for any particular point. Immediately a dozen melodies will start in the memory, not one of which exhibits the point indicated. There is only one rule for making melody that never fails, viz.: Be born with the faculty for it.

The minor scale is one of our inheritances from the Greeks, who knew no other, except what they called the chromatic and enharmonic scales, which were not by any means such scales as we would call by these names. The most usual scale among the Greeks was the scale of A minor. It was to this scale that the Latin's adapted the severe letters that we use to this day. This is why we do not call the first note of the natural scale A, instead of C, as we ought to do.

Back of all possible scales there is an element wanting, without which music would be lacking the very foundation upon which the whole superstructure rests—that element is rhythm.

The recurrence of accents at equal periods of time. The object of the essay is to show how the rhythmical idea pervades music, from the simple 1, 2 or 1, 2, 3, up to the number and order of succession of the themes in the most extended composition. The last subject touched upon was the union of poetry with music. The necessity of the musician becoming familiar with the various forms of English versification cannot be too strongly insisted upon, but verse is more or less of a guide to the composer, as the stanzas naturally fall into musical periods. The difficulty of putting words and music together is much increased when the words are unmetrical. To accomplish this the "words" must be read properly. To do this a knowledge of rhetoric is essential. The best way to acquire this is under the instruction of a good elocutionist. It may seem to some readers that we are making rather large demands on the musician, but it must be remembered that success in any art may only be attained by knowing *something* of all the other arts, in addition to *everything* about your own art.

QUESTIONS.

1. What relation does the study of harmony bear to music?
2. What does harmony teach?
3. What are the effects of its study on the pupil?
4. How did harmony arise?
5. How was its progress hampered?
6. What intervals had to be admitted among the connuances to make harmony possible?
7. Are church scales susceptible of harmony?
8. How are they generally treated?
9. Of what kind of intervals do chords consist?
10. Which comes first, melody or harmony?
11. What is meant by figured bass?
12. What are the advantages claimed for working from the melody in studying harmony?
13. What distinction is made between modulation and transition?
14. How many keys in a related group?
15. May any definite meaning be attached to chords?
16. Upon what do the various "expressions" of a chord depend?
17. What distinguishes the modern scales from the ancient?
18. What is tonality?
19. May any definite rules be given for the construction of melody?
20. How is the minor scale supposed to have originated?
21. What is the underlying element of music?
22. How many rhythmic units are there?
23. How may rhythm be extended?
24. What studies should be pursued to enable one to successfully put words rhythmic and unrhythmic to music?

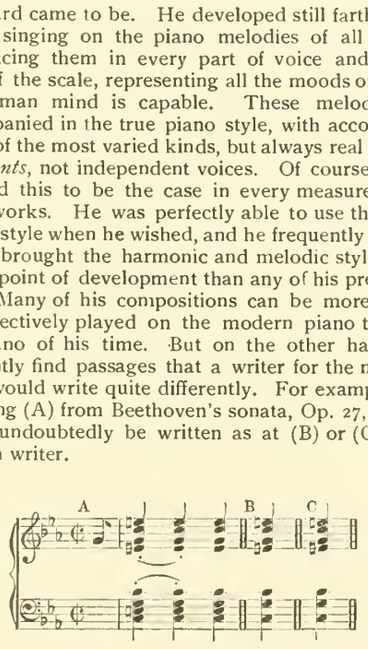
THE DEVELOPMENT OF THE PIANO.

FRANCIS L. YORK.

The development of the piano as an instrument, as we have seen in former articles in this series, led to a corresponding development in the methods of playing the piano. These changes in piano construction and in piano playing had a very marked effect on the compositions written for the piano, and eventually on all compositions. For the piano is *par excellence* the instrument of the composer, and besides, as it is the instrument that is by far the most common, music loving people naturally are more influenced by it and by the style of music that is best suited to it, than by any other. Thus a public taste is formed that of necessity influences writers for all kinds of instruments. As we have said before, music was originally vocal and naturally the first attempts at instrument making were in the direction of trying to produce something that would, to some extent at least, imitate vocal effects. Thus the instruments of the violin class and of the flute class, as well as those wind instruments represented by the horn, all produce effects that are more or less vocal in character. Music as it was at first written for the prototype of the piano was very largely of this character. The culminating point of this style of writing was the polyphonic school, best known to us by the works of Bach and Händel. In both of these writers' works we frequently see the influence of ideas that were soon to become preponderant, but the style of their work, the real kernel of it, is the voice progression. This is true to such an extent that it is not uncommon to find passages that actually sound badly if we regard them only from the standpoint of sensuous beauty. For example, the following from one of Bach's fugues, gives us at no point a combination of tones that is pleasant or even tolerable to the ear—it sounds decidedly bad. Such a passage is explained by the fact that the attention is entirely taken up by the leading of the voices, and the hearer does not notice the harshness of the tone combinations.

This is by no means a solitary instance; it would be easy to find a multitude of similar examples. By hearing such passages as this it is easy to see why Bach's music is not popular with non-musical people. Popular taste as educated by the piano and its predecessors demands something that is well sounding, and cares nothing for polyphonic, *i. e.*, voice, work. In this respect no doubt the extraordinary vogue of the piano has been a detriment to the cause of music. Too many people are trying to play the piano and too few are giving their attention to stringed and other instruments. But the value of the piano has been so great, its influence for good has been so marked, that the harm it has done in discouraging polyphonic music is very small in comparison. It must not be under-

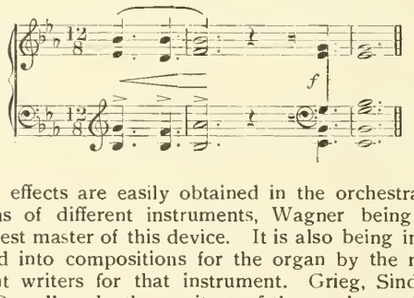
stood either that such music can not be well and effectively played on the piano. There is no single instrument, except the organ, that offers such opportunities for polyphonic playing, but the difficulties are much greater than in harmonic playing, the content of the music is much harder to grasp, and the instrument offers such a wide field for the production of so many other varied and beautiful effects, that we cannot blame modern composers for turning their attention to them, rather than attempting to excel in a style that has been already so thoroughly exploited, and in which they must inevitably run the risk of comparison with such great writers as Bach and Händel. Haydn, whose life was partly contemporary with that of Bach, and Mozart who was born only six years after his death, did much to change the style of music written for the piano. In the compositions of both these writers we find harmony, *as such*, put in a much more prominent place. While paying great attention to polyphonic writing, they appreciated the fact that here was an opportunity to produce music of a new style, music containing new effects. Thus arose the so-called monophonic style of composition, in which one voice or part contains the principal idea, and the other parts (here hardly to be dignified by the name of voices), are simply supplying an accompaniment that is entirely subordinate to the principal melody. Following closely after these writers came Beethoven, who seemed to divine almost by intuition the future of the piano, so that he wrote music for the instrument as it afterward came to be. He developed still farther the art of singing on the piano melodies of all kinds, introducing them in every part of voice and in all parts of the scale, representing all the moods of which the human mind is capable. These melodies he accompanied in the true piano style, with accompaniments of the most varied kinds, but always real *accompaniments*, not independent voices. Of course we do not find this to be the case in every measure of his piano works. He was perfectly able to use the polyphonic style when he wished, and he frequently did so, but he brought the harmonic and melodic styles to a higher point of development than any of his predecessors. Many of his compositions can be more easily and effectively played on the modern piano than on the piano of his time. But on the other hand, we frequently find passages that a writer for the modern piano would write quite differently. For example, the following (A) from Beethoven's sonata, Op. 27, No. 1, would undoubtedly be written as at (B) or (C) by a modern writer.



So in playing the above on our pianos, the E in the left hand, and to a less extent the G in the right, should be slighted. But even Beethoven was more orchestral in his than is compatible with real piano thinking. Not unfrequently he wrote passages that belong rather to the orchestra than to the piano. It was left to the genius of Chopin, the apostle of the piano as he has been called, to show us what the piano as an instrument really is, and of what it is capable. He never oversteps the limitations of the piano, his music never sounds like abortive orchestral music, yet he expresses the most varying moods, from the stormiest passion to the gentlest melancholy and most delicate sentiment. He knows all the subtlest effects of his instrument; weird, dazzling, bright, sombre—intense pain, careless gaiety, harmony of a kind never before heard, melody such as no man ever wrote, and the whole done so beautifully and withal scientifically as to disarm criticism. Beginning with Chopin, too, we find a new idea in the treatment of voices. He is not content with a single melody and a single accompaniment, though some of his work is written in this way. In his compositions we find constantly little fragmentary melodies creeping in; the alto voice, for example, may have a short melodic figure that seems to come from nowhere and to go no whither, and this at the same time that the principal melody is still sounding. Such writing, while it does not give individuality to the separate voices, gives a richness to the whole composition that strict monophonic writing could not do. The following examples, both taken from Chopin's Nocturnes, illustrates this peculiarity of his style.

See also the Study, Op. 25, No. 7, which is largely constructed of two voices of nearly equal importance and with accompanying parts, but so written that it is difficult at times to know which is the more important part, or even to know which is melody and which is accompaniment. This, then, is polyphony, but not the polyphony of Bach or of Händel. In addition to all these innovations, Chopin knew how to use harmony *as* harmony—that is, depending for his effects strictly on the simultaneous sounding of tones, and the proper successions of such combinations. For an illustration see the middle part of the slow movement of his F minor Fantasie, too long for quotation here. In this passage we have pure tonal beauty, the melody is entirely subordinate, and there is no thought of voice progression. Although Chopin wrote only for the piano, it is remarkable that his music has had a tremendous influence on composition of all kinds. Even the writing of operas is to-day different from what it would have been if Chopin had not lived.

One of the latest phases of piano composition we hinted at in our last article in this series, namely, the combining of tones in such a way as to give especial prominence to some particular tone, thus giving a special tone color to the combination. Chopin understood this also, but he did not make so great use of it as many of the more recent writers have done. The following, also from a Chopin Nocturne, shows the special effect that can be thus obtained.



Such effects are easily obtained in the orchestra by means of different instruments, Wagner being the greatest master of this device. It is also being introduced into compositions for the organ by the most recent writers for that instrument. Grieg, Sinding, MacDowell and other writers of the modern school frequently make use of such combinations, introducing in this way harmonies that otherwise would scarcely be tolerated. The following from the well known Album Leaf by Grieg gives a most delightful effect if the dissonances are not made too prominent.

It is due to the employment of such combinations as the above that many of the modern writers for the piano are condemned by musicians of the old school for employing dissonances that are too harsh, when the fault is rather in the player than in the composer. Players of the school of Czerny, Koehler, Plaidy *et al.*, can make nothing of such compositions, and hence very naturally conclude that they are badly written. When we see the beautiful effects that may be obtained by the use of dissonances that a few years ago were absolutely forbidden, we are forced to believe that the poet was not so far wrong after all when he wrote that "all discord is harmony not understood."

The student of the piano will understand from the foregoing that he must study the composition he is to play, not only in the light of the development of the piano as he has learned it, but he must also keep well in mind the epoch during which the composition was written, the style of the composer and the degree of development the piano had attained when the composition was written.

QUESTIONS.

1. What effect has the piano had on compositions for other instruments?
2. How did the earliest piano music differ from the more modern?
3. Was it considered necessary that music written in the polyphonic style should always sound well?
4. Compare the styles of Bach, Mozart, Beethoven and Chopin.
5. What practical benefit can a student of the piano derive from the study of the development of the piano?

A GUIDE TO THE STUDY OF MUSICAL LITERATURE.

ARTHUR L. MANCHESTER.

It has been the aim of these articles to bring to the notice of the student something of the riches of musical literature of which he may avail himself. In this, the concluding article of the series, we will briefly review the course we have taken, drawing a few practical deductions therefrom.

Some years ago it was said—by an eminent American musician—that there was no untechnical history from which an American student could get a direct, simple and untechnical account of historical development. Quoting the exact words, this is the statement: "I tell you, in spite of all our boasted culture and all our self-complacency, we have *no* musical literature—that is, none worth a moment's consideration—of the sort I mean. Why, if one of my young pupils should come to me to-morrow and ask, 'What work is there in the English language from which I can get a direct, simple, untechnical account of the history of music and the stories of the men who have made music what it is,' I should have to answer that there is none, that she must master the German, French or Italian language, or else dig the information from a thousand obscure sources before she could even begin a *true* musical education."

If this statement be true, our writing has been vain words. But is it true? The writer believes not. True, the remark was made some years ago, but even at that time there *were* books in the English language from which an earnest student could derive more than the beginning of a musical education. These books were not all by American writers, but American publishers had placed them within the reach of the American student. It is true that a musical history in one volume, well suited to student use, and combining characteristics that such a book should have, is not yet written. Nevertheless, there are histories from which the pupil, who wishes to know music growth, can learn it, without undue labor and expense, much less the mastery of German, French and Italian. And of biographies, telling the "stories of the men who have made music what it is," there are excellent ones within the reach of all who are interested in them.

What have our studies in musical literature done for us? In History, Biography, Aesthetics and Criticism what material have they developed for practical use? For Historical study we can plan a quite comprehensive course, which will give us an accurate perspective of musical art development without too great a drain upon our time or our purses.

Lessons in Musical History. Fillmore.
The History of Music in Twelve Lectures. William Langhans.
Music, How It Came to be What It Is. Hannah Smith.
History of Modern Music. John Hullah.
How Music Developed. W. J. Henderson.
History of Music. W. S. Rockstro.
Evolution of the Art of Music. C. H. H. Parry.
Summary of Musical History. C. H. H. Parry.
Catechism of Musical History (2 parts). Dr. Reimann.

From these may be selected volumes which will give the earnest student more than the beginnings of musical education. A good selection is:

Lessons in Musical History. Fil more.
How Music Developed. W. J. Henderson.
History of Music in Twelve Lectures. William Langhaus.
Evolution of the Art of Music. C. H. H. Parry.
Summary of Musical History. C. H. H. Parry.
Catechism of Musical History (2 parts). Dr. Reimann.

To these may be added the following, which pertain to special instruments and subjects:

The Pianoforte and its Music. Krehbiel.
The Pianoforte and its Music. Fillmore.
History of the Pianoforte and Pianoforte Literature. C. F. Weitzmann.
The Organ, Its History and Construction. Hopkins and Rimbault.
The Violin and Its Music. George Hart.
Violin Making as It Was and Is. Ed. Heron-Allen.
The Opera. R. A. Streatfeild.
The Music Dramas of Rich. Wagner. Lavignac.
Romance of Psalter and Hymnal. Welsh and Edwards.
Olden Time Music. Brooks.
Indian Story and Song. Alice C. Fletcher.
Music of the Bible. Stainer.
Songs and Song Writers. Finck.
Choirs and Choral Music. Mees.
The Standard Oratorios, Operas, Cantatas, Symphonies (four volumes). Upton.

The subject of biography presents almost an embarrassment of riches. In addition to the many volumes of biographical sketches, the lives of the masters of music have been written in detail. The list is too long to be included in the average collection, and selections may be made from the following which will serve all ordinary purposes well:

Bach, by R. Lane Poole.
Bach, by C. F. Abdy-Williams.
Beethoven, by H. A. Ruddnall.
Beethoven, by Dr. Louis Nohl.
Beethoven, by Schindler.
Haydn, by Pauline Townsend.
Haydn, by Dr. Nohl.
Mozart, by Dr. F. Gehring.
Mozart, by Edward Holmes.
Mozart, by Dr. Nohl.
Handel, by Mrs. Marshall.
Handel, by W. S. Rockstro.
Schumann, by J. A. Fuller-Maitland.
Schumann, by August Reissmann.
Schubert, by H. F. Frost.
Mendelssohn, by Rockstro.
Chopin, by Huneker.
Chopin, by Liszt.
Liszt, by Dr. Nohl.
Wagner, by Dr. Nohl.
Wagner, by H. F. Finck (two vols.).

To these should be added "Studies in Modern Music," which contain biographical and critical matter of the most valuable character. Spitta's Monumental Life of Bach, in three volumes, and Jahn's Life of Mozart, in two volumes, should be in the possession of all who are able to secure them. Some volumes of collective biography may be added to this list: Grove's "Dictionary of Music and Musicians," Crowest's "Tone Poets" and Champlain's "Cyclopædia of Music and Musicians," are valuable works.

When we turn to the literature of Aesthetics and Criticism, we are confronted by an exceedingly interesting list of titles from which we may choose that which most accurately fits our needs. Using our previous studies in history and biography as a basis, and having secured from them a perspective of the art, our further reading can be made the vehicle for attaining a fuller acquaintance with the art itself. Our former remarks on the value of Form, will serve to show the trend we would have this reading take:

What is Good Music. W. J. Henderson.
The Beautiful in Music. Hanslick.
Interludes. Bannister.
How to Listen to Music. Krehbiel.
Music and Musicians (two volumes). Schumann.
Musical Expression. Lussy.
The Elements of the Beautiful in Music. Pauer.
Studies in Modern Music. Hadow.
Mezzotints in Modern Music. Huneker.
Chopin, the Man and Musician. Huneker.

While containing much biographical matter these books are particularly valuable as contributions to criticism. They will stimulate and inform every one who reads them well.

Directing our studies along specific lines, we turn our attention to the analysis of compositions and find great help in

The Works of Frederic Chopin and their Proper Interpretation. Jean Klecynski.
Chopin's Greater Works. Translated by Janotha.
Beethoven's Sonatas Explained. Von Elterlein.
Beethoven and His Nine Symphonies. Grove.
Analysis of Form. Harding.
Principals of Expression in Piano Playing. Christiani.
Chopin, the Man and Musician. Huneker.

The books named in this guide to the Study of Musical Literature are but a few of those which may be had. They will provide the collateral musical education which should always accompany technical proficiency. Comparatively few musicians will be unable to procure this modest library, if they have the will; and the strength which comes to him who owns and properly uses them is beyond calculation.

There has been, and still is, too little interest in the acquirement of that form of training that comes from well conducted reading. It is with the hope of stimulating it that this series of articles has been printed. If the teacher has cultivated a liking for books and has learned how to use them, he will have a source of inspiration and a defense against discouragement at hand that will never fail him.

In closing, I want strongly to recommend two books for repeated readings. They are "Sesame and Lilies," by Ruskin, and "The Intellectual Life," by Hamerton. They are a mine of mental riches, which constant digging will not deplete.

If those who have followed this course will prepare a serious and careful thesis on the subject, I will take pleasure in examining it.

ANNOUNCEMENT.

With this issue the work of the current *New Education* series ends. In the December number announcement of those who are to receive certificates will be made. Heretofore, we have returned papers to those who have sent postage. We cannot promise to do so at this time. The clerical work involved makes it impossible. Word continues to reach us of the value of the studies inaugurated by this department; of this we are glad, and we hope that the studies of the five years may prove to be cumulative in value. They have included a wide range, beginning with preparatory work, leading into comprehensive biographical and analytic studies of composers, both classic and modern, and, finally, into a course of collegiate music study of technical and practical worth.

The character of the work for the coming year will be quite different. Due announcement will be given in December, and the work will begin in January. As planned, the *New Education* for 1902, will touch a most important and practically vital part of the teacher's work, and will undoubtedly meet with approval.

The editors offer congratulations to those who have persisted in their work through the entire five years, and hope to include them in the sixth year's enrolment.

TRUE ART.

Art is the expression of man's joy in his work. The province of art is to impart a sublime feeling—to bestow a beautiful emotion. Thus the artist is one who expresses his highest and best in a way so that others are able to share in his joy.

The playing of the "Pilgrim Chorus" from Tannhauser affects me into silence and tears and uplifts my spirit so that there come to me thoughts that are beyond speech; for me, Wagner makes the room a sacred chancel, the player a priest and all things for the moment holy.

Wagner is gone, but the mintage of his soul is our heritage. He expressed himself; we have the net result of his highest emotions; and the loftiest moods of his great soul speak to us out of the past. Wagner is not dead—he is here. His music imparts to us his feelings, and thus through art he has expressed for us the joy, the mingled sadness and aspirations of his soul.

Wagner, Millet and Whitman speak the same gospel; but each expressed his life in his own way. One imparted his emotions through the sense of hearing, another through the sense of sight, and the other through the understanding. But the "Pilgrims' Chorus," "The Sower," and "Drum Taps," are one in their message.

Through art we are heirs to the highest and best that the world has ever thought, or known, or felt. The man himself was often depressed, unreasonable—his life faulty. At such times he symboled no beauty. But occasionally his spirits arose to transcendent heights, and the record of that brief home of Divine Love comes to us in his art. Alfred Tennyson may have been, at times, whimsical and absurd, but no matter—all that is gone, and only the harmony of his life is ours. We have the "In Memoriam."

The desire to impart his highest emotions is what causes the artist to express—he wishes to share his joy with another. The creative impulse in art is the desire to give out your thought to others.

I know a little girl, just four years old, who goes to kindergarten, and there she sticks little red and blue paper wafers upon card-board so as to make pretty geometrical figures. And when she sees that she has produced a beautiful result, she wants to run all the way home to show the result to mamma. That is, she is so happy that she wants to share her joy with another. And thus we see that this little girl has supplied us the true and best definition of art—it is the desire to impart a feeling. And the higher and greater and more sublime the emotion the keener the desire to give it out. One can endure sorrow alone, but it takes two to be glad. Only by giving out our joy, do we make it our own—by sharing, we double it.—*Elbert Hubbard.*

FROM "THE AGES."

Look on this beautiful world, and read the truth
In her fair page; see, every season brings
New change to her of everlasting youth;
Still the green soil with joyous living things
Swarms, the wide air is full of joyous wings;
And myriads still are happy in the sleep
Of ocean's azure gulfs, and where he flings,
The restless surge. Eternal Love doth keep
In his complacent arms the earth, the air, the deep.
—*William Cullen Bryant.*

TAKING STOCK.

LULIE R. PITTS.

Merchants have a custom of beginning the new year by taking "stock." A careful survey of all left over goods is made. Every roll of cloth is measured, every barrel of sugar noted, every piece of meat weighed. The work is very laborious, and is much dreaded by all merchants, but they never think of shirking the duty, realizing that it is essential in keeping track of their business.

I knew a gentleman who had a habit of spending a quiet hour, at the close of each week, reviewing its events, taking cognizance of his successes and failures, of duties done and duties left undone, and preparing himself by a few minutes of earnest, prayerful meditation to add to the one, and avoid the other during the forthcoming week.

No music student can do the best work of which she is capable without adopting such a plan as this. At the beginning of each school year, take an inventory of your stock. Measure your attainments with the yard stick of conscientious self-examination, weigh your deficiencies in the unerring balance of intelligent criticism, unroll your music sheets, and note the blurred passages with the reasons therefor, and then, go to your work with a determination to rid yourself of objectionable wares, and lay in a supply that will do you honor, and invite the patronage of your fellowmen. Are you weak in technique? Resolve to overcome this weakness by giving extra attention to arm, wrist and fingers. Is your expression faulty? See to it that no sign is neglected. Is your interpretation meaningless? Determine to tide over this difficulty by careful thought, and attention to the teacher's suggestions. Then, at the end of each week, take time to examine the quality of the work you have been doing. What have you learned? In what have you failed? Spend a few moments in devising ways and means of making more valuable the next week's study.

There is no such thing as progress or pleasure in the haphazard way that many pupils have of dropping listlessly in for their lessons two or three times a week, stumbling over a few exercises and a few pages of music, and bowing themselves out to go over the same routine at the next lesson—the same listlessness, the same stumbling, the same exercises, the same music—no ideas, no thought, no method, no plan of study.

Uhhappy student! Miserable teacher!!

"All greatest music is by the human voice, as all greatest painting is of the human face."—*Ruskin.* (Mr. Ruskin has ever been a warm upholder of the powers of the human voice.)—*Wakefield.*

FOR THE YOUNG PEOPLE.

The Young Musicians' Perseverance Club.

Conducted by ARTHUR L. MANCHESTER.

In order to get our journal out in good time this page must be prepared quite early, hence our letters have not had time to reach the editor. He is expecting them and will print them in the next numbers. There are some questions at the bottom of this page that our members are to answer, and here are some to be answered also.

1. What would you like our Club to do during the coming year?
2. What will you do to help in making it interesting and beneficial?

Now give these two questions careful thought and suggest what you would like to have appear on our club page and then say what you will do toward making any plan we may settle upon a success.

—

We have a letter from this member in far-away Texas. When she writes again we shall expect to hear that she has conquered some more pieces.

CRESSON, TEXAS.

Dear Mr. Manchester—I am very glad that you have accepted me as one of your Club members. Since I wrote you my first letter I have been taking music lessons, and I have learned several new pieces and memorized them. On one of my pieces I practice forty minutes; on another thirty minutes; another, forty-five minutes; firm touch, five minutes; soft touch, five minutes; staccato, five minutes; wrist action, five minutes. The way I memorize is: I take one or more measures at a time and read them over until I get them so I can say them without the book. I hope that I will get my questions in time this month. I will try to answer the questions. Best wishes to all the Club.

Yours truly,

M. AGNES ROBERTS.

We are very glad to welcome this candidate from Massachusetts. We must have a roll-call before long and learn just how many of us there are.

WAKEFIELD, MASS.

Dear Mr. Manchester—I will write a short letter to you asking for admission to your Club. I have been taking THE MUSICIAN since March, and have read the page for the Young People with great interest. I should like to see my name numbered among those who have correctly answered the questions. Extending my best wishes for success to you and the Club, and hoping to now be considered a member, I remain,

Yours sincerely,

GRACE A. WOODBURN.

We are heartily glad to have this member rejoin us, and hope those eyes will not give further trouble. This letter is very interesting.

EMPORIA, KANSAS.

Dear Mr. Manchester—Perhaps some one will remember my name as appearing in THE MUSICIAN once or twice last Spring, but I should not be at all surprised if nearly every member of the Club has forgotten me, for they would not be apt to remember a girl who shows herself to be so disinterested as I, undoubtedly, seemed to be; but really and truly I was not disinterested at all, for it was only necessity that prevented me from continuing a member of the Club. I have had a great deal of trouble with my eyes during the past six months, and of course, could not use them for the Club work; but now they are so much better that I shall, at least, attempt to answer the questions. Although I had to give up everything else, I did not give up my music, and it has been a wonderful source of comfort to me. During the Summer I learned nearly all of Mendelssohn's Concerto in G minor, besides one or two of Chopin's compositions, and I really have not fallen so far behind as I expected to. This Winter I intend to work hard so as to make up for what I lost during the Summer, and I sincerely hope that I shall find the results to be the same as with this letter namely, that I shall have accomplished more than I expected, for when I commenced this letter my intention was that it should be a short one, but I perceive that it is becoming quite lengthy, so will close. Hoping that you will welcome me as cordially as you did before, I remain the Club's well-wisher.

RUTH L. SIMPSON.

THE ORIGIN OF THE MOONLIGHT SONATA.

From "Letters of a Traveller."

BONN.

Those who have never been so happy as to travel through the beautiful country of the Rhine I wish, from my heart, might speedily have that pleasure; for truly, he who has not seen that unrivalled land, with its pretty villages and its noble cities, its smiling villas and vineyards and romantic ruined castles—its lordly Rhine, the king of all—nor heard the cheerful songs of its peasants, laboring in the vineyards, cannot know how dear and lovely is this *schön* Germany!

The venerable cathedral! How solemn and strange the feeling that fills one's heart, when entering, for the first time, beneath the shadow of those lofty, twilight arches! An awful stillness prevails, and speaking pictures look forth upon you; as you advance streams of softened light come downward from the arched windows of the gigantic nave. And now the organ music steals, a low, distant murmur, swelling louder and higher, till, rising into powerful harmony, the "Gloria" bursts forth; then, overpowered by emotion, rapt in contemplation of the unspeakable greatness of Deity, you can but kneel and adore!

At least, so it is with me, and often so. I have listened to that music, heard it from beginning to ending, then rushed down from the choir loft, to throw myself prostrate on the marble pavement and weep tears of joy! Heaven and earth were my own! Had I not seen them in their holiest loveliness? Heard, enraptured, their thousand, thousand voices—from the sweet murmuring of the flowers to the awe-inspiring thunder peal? And listening thus, understood I not the mysterious harmony of all I saw and heard!

Yet it is of another attraction of charming Bonn that I wish to write to-day.

Everywhere the harmony continues. We were floating down the Rhine, late in the Summer afternoon, and as our boat followed the outline of the shore the sun was sinking in the West, touching the mountain tops, castle-crowned with gold and purple. A bend in the cliffs brought into view what seemed a tiny hut, or cottage, lying as tho' asleep in the soft haze of the late day. We landed, attracted toward it by its quaint appearance, yet more because of a rude sign fastened, yet flapping, half loose, from a bending spruce dipping to the water's edge. Above a pointing hand we read: The Friedmann Cottage. Lina Friedmann! We had read of her; heard of her; the blind-girl musician, who lived immortalized in Bonn annals, the erst-time inspiration of Beethoven's "Moonlight Sonata."

We followed the steep incline, up which, the historical records of these parts being true, the composer must also have taken his way, for the path led directly to Bonn beyond, and it was over this path that Beethoven and his friends were passing one evening, when they heard the sound of a harpsichord within the little cottage. Stopping to listen, the composer heard the harmony of his Sonata in F. Yet it was rendered in fragments, as though the player trusted to ear and recollection only. Yet something of delicacy and power in the musician's touch attracted the composer and he lingered.

The music stopped and the despairing words came to them through the open casement:

"Oh, if I could but hear some true musician play this!" and the words ended in a sob.

"Let us go in," said Beethoven.

They entered and found the player a young girl, beautiful, yet blind.

Beethoven sat down at the poor, old harpsichord and played as he had never played before. His listeners were spellbound.

"Tell us," begged the parents of the girl, "who are you?"

For answer he played the Sonata in F, turning at its close toward the girl, standing beside the window casement. A flood of beautiful moonlight filled the room, transfiguring her exquisite, upturned face. It flickered over the poor little instrument and encircled, as with a halo, the noble figure seated before it.

The profound silence was at last broken by the composer, who said, gently: "I will improvise a sonata to the moonlight."

Then was created this wonderful sonata, beginning in a sad, tender movement, emblematic in sound of the beautiful radiance flooding them in its glory.

The music ceased, and with a brief farewell Beethoven hurried home to put upon paper this composition which delights and entrances all who hear it.

Thus runs the legend. The house, a mere shell, weather-beaten would, no doubt, have long ago fallen to pieces, but for the sheltering rocks about it. At a little distance stands a trim cottage, and the *frau*, issuing from it at the first approach of visitors, tells the story while ushering them into and about the broken-down place beyond. The corner where the harpsichord is supposed to have stood is preserved intact, and beside it the swinging-window hangs upon its one hinge. Other visitors claimed the good *frau's* attention and we stood apart, without the cottage.

The sun had sunk and the crescent of the new moon was hanging high above the rose of the Western sky, while linking thought across the years, seeing the forms which had immortalized the scene—each, all, long since vanished—we lingered, half wondering at the strangeness of life, half saddened by the desolation and silence enwrapping the place.

A REMINISCENCE OF MENDELSSOHN.

In an interesting article in *Blackwood's Magazine*, the late Charles Salaman gives his personal recollection of a meeting with Mendelssohn: "It was at the Philharmonic, and he had just finished playing Mozart's Concerto in D minor, into which he introduced his own impromptu cadences, conceived with fine taste and sympathy, splendid invention, and masterly skill. I was still spellbound by the inexpressible charm of the pianist, when that fine old musician, Thomas Attwood, the favorite pupil of Mozart, and organist of St. Paul's Cathedral, knowing my intense admiration for Mendelssohn, led me up to the Master, and presented me to him as the young pianist who was, in a few days from then, to perform his G minor Concerto. The simple charm and easy cordiality of his manner, his graceful modesty in face of my obvious homage, quite captivated me. Shortly after this I had a very agreeable surprise. Sometimes Neate and I would play duets for pianoforte and 'cello, and one evening at his house, after playing Beethoven's Sonatas in G minor and F, Neate, saying 'Now for a contrast!' took up a concertante duo by Bochsa and Duport, a light but elegant thing, and suggested that we should run through it. We were in the midst of it, without much enthusiasm, when we were startled by a loud double knock. 'A visitor,' cried Neate, 'who can it be?' The door opened, 'Mr. Mendelssohn,' said the servant. 'Oh, he musn't find us playing such music,' said my old master as he flung the copies in a corner. Mendelssohn's entrance brought charm at once into the room. He seemed pleased with Neate's hearty welcome, laughed over his confession about the Bochsa music, and was soon at home with us, chatting familarly on a variety of subjects, of both passingand enduring interest. How delightful was his talk, whatever the topic, how animated his manner, how fascinating his smile as the playful mood danced over the earnest thought! He seemed to understand everything, and to feel rightly about everything, to be so wise in his enjoyment of life. We had no music during the hour or so that Mendelssohn remained with us. His talk had melodies of its own."

MUSICAL MATHEMATICS.

We will change the character of our questions this month, and have some in musical arithmetic. We have had musical history, now we will do musical addition and subtraction. These are not very hard questions to answer, but they will make you think a little.

1. Take a dotted eighth from a double-dotted quarter and write the value of the remainder.
2. Add an eighth, two sixteenths, eight thirty-seconds, an eighth and a dotted quarter. Give the answer in one note.
3. Add a dotted quarter, two sixteenths, a half note and sixteen thirty-seconds. Give the answer in one dotted note.
4. Add a dotted eighth, a dotted sixteenth, a double-dotted eighth and five thirty-seconds. Give the answer in one note.
5. Take three sixteenths from a double-dotted quarter and write the value of the remainder.
6. Take three eighths from a double-dotted half note and write the value of the remainder.
7. How may the value of an eighth be added to a dotted half-note without writing the eighth?
8. What is a breve? A semi breve? A minim? A quaver? A semi-quaver? A demisemiquaver? A crotchet?

SAINT CECILIA'S DAY.

SAINT CECILIA'S DAY IS NOVEMBER THE TWENTY-SECOND.

The Saint Cecilia Society of Hickory, North Carolina, celebrates the day annually. Last year a paper was read about the Saint, and "The Vision of Saint Cecilia," by Labouc, sung by Mrs. Chadwick, with a violin obligato.

"To the members of each profession Fame holds out some glittering reward, to be given only to those who have penetrated to the very innermost circle of merit. In the fine arts, there are the royal academies, recognition by which is as dear to the hearts of musicians, artists, sculptors, etc., and in many cases a thousand times more difficult to obtain, than is the Victoria Cross to Tommy Atkins. Many institutions there are whose members represent most that is highest in science, literature, art and music; certain honorary ones pre-eminent for their exclusiveness and the honor attached to their degrees. Such is the Royal Academy of St. Cecilia, at Rome, which, a few months ago, conferred a degree upon Lilian Blauvelt.

Founded in 1585, the institution commenced its existence known as the Order of St. Cecilia, and to make certain that the degree of the order should be coveted to the utmost, its creators ruled that the number of degrees conferred should never exceed fifty, of which twenty-five should be conferred upon Italians and twenty-five upon foreigners. More than three centuries have since rolled by, and in that time but eight foreigners have received the degree."

Sir Arthur Sullivan, the composer, died just a year ago on St. Cecilia's day, November 22, 1900.

(Translated from "The Signale," by S. C. V.)

APPRECIATIONS AND THE TONAL ART.

DR. HERMANN FRHR. VON DER PFORDTEN.

The fact cannot escape the careful observer, that music in our day is not only studied with enthusiasm but, at least nearly everywhere, considered seriously. Valuable instruction is as carefully prepared as are fine interpretations; and whoever desires to have a firm musical foundation, for him is lacking neither the opportunity nor the means; this undoubtedly is to be hailed as a sign of progress; soon will all superficiality and thoughtlessness be done away with.

The question arises, however, whether or no, there is given a guarantee for this musical output to take root and blossom. It must often seem to friends of the art as if too much good were offered, as if much were given to our generation over and above its need and susceptibility. Certainly it must be our wish and endeavor that the tonal art shall not remain the privilege of a few favored ones, on the contrary, that it may be the common possession of the whole land. When we try to declare its highest worth, we name it our nation's treasure; only we must not forget that the people should be educated by the nation, and also for possession and enjoyment of national good. It is not enough to insure possession or to facilitate enjoyment; the interest and joy therein must constantly be awakened anew.

Now in this connection, I think, there is much to be done. According to my conviction, we are not all—not even the majority—so musically inclined that we may be pronounced quite a musical people. Certainly the finest offerings of the noblest masterworks oftentimes leave but a fleeting impression, which passes as suddenly as the tones die away. To hear much good music is to everyone undoubtedly of the highest worth, and he who can do this without too great a sacrifice of time and money is to be envied. But this is only half of the benefit here to be discussed; there is another part equally as weighty. That which we hear should remain with us, work in us, not only should it be the sensation of a minute, but it should last throughout our lives. The mass of music which one hears to-day, would be overpowering, did it not sink deeply and prove fruitful. Mankind will only become musical when it not alone drinks music with the ear, but when soul and being are filled with it. To some this sounds extravagant and exaggerated.

Apart from those who constantly demand the transitory, popular style of music, are many earnest thinkers who refuse to be interested in music. I have often been tempted to say: "You are more musical than you believe; you do not know it yourself, no one has convinced you. You would be astonished if it were made clear to you."

May not then a slight doubt arise as to whether or not our usual method of instruction is practical—exhaustive? Is it not, in many cases, too one-sidedly musical? From my observation, all one-sidedness carries with it the danger of isolation. If we conceive and teach music always simply as such, decidedly we must deal always with purely musical men, not at all with those who are apparently or presumedly unmusical. As soon, however, as we discover the great connection which the tonal art shows it so closely bears to progress in culture, then we shall arouse universal and liveliest interest.

Our music is not a thing by itself, nor something which exists or not according to our pleasure. Nor is it merely an adornment or a luxury, which we may cultivate or cast aside. It is something more to us; it concerns a large part of our existence here. So must we declare it to those who are indifferent to it, or who with apathy, hold aloof from it. A knowledge of music which discloses i s very essence and manner of working we do not at present possess; perhaps never will we succeed in first principles. Certainly, for a thousand interior and exterior reasons is it unusually difficult to explain its principal questions to the unmusical. And, indeed, historical research and representation is not in such cases necessary. We have seen in recent times a music-philology appear, which with busy industry and admirable wisdom h as collected building stones for a history of the Tonal Art. But the most scholarly treatment, the most perfect examples, are unable to arouse interest outside of professional circles. Everything needful for the attainment of our end is at hand, and accessible without further delay; its profitable turning to account alone is necessary. I would hope for more studies in appreciation (pertaining to style) and stimulating explanation. That is, beside the characterizing of each composition regarding its nature and the time of its production, another composition of the same class and origin. Then the effect of such an artistic production upon contemporaries of the composer, as well as upon aftercomers, shown in special and prominent characteristics, and beside this inner homogeneous connection the contrast in personality and work. Finally the way shown to a just conception, eventually to a correct interpretation from such an intelligent appreciation, with a marked accentuation of the idea by its medium of expression, technic.

This is intelligence and judgment trained. The first step toward independence, is learning to think in music. Problems present themselves in quite a surprising manner and before we are aware of it we find ourselves in the midst of interesting and suggestive researches.

I would recommend that a beginning be made with vocal music, because the connection of words makes the conception easier. Take, for example, Franz Schubert, the composer of songs. This theme is most prolific. All types of song are suggested, from the simplest strophe up to grand opera. The selection of his text, its treatment, his melody, harmony, declamation, piano accompaniment, all belong to a collective whole, showing him a master and leading us to the query whether, and how, progress was made after him and up to that point which separates our German song from lyrics of other nations. In this way one can hear Schubert, learn to sing his songs, to teach them, and thereby interest not alone singers and pianists, but every friend of music. Or take Karl Maria Von Weber's opera "Der Freischutz," with its unequalled success and its lasting popularity as a favorite of the people. It declares the worth of a masterpiece, closely connected with life and is to be judged according to a special standard. The question arises how so simple a play can hold its own against grand opera: thus we see the might of originality and nationality, the power of truth and poetry—and comprehend why the truly Romantic is so musical. Then is shown that our attitude towards our own art is not so indifferent as sometimes appears. All this incites us to penetrate farther for comparisons and we comprehend why one longs for German style in German art.

Having advanced so far we may venture to go on to absolute music and dare to analyze the work of Beethoven and the symphony. Even the many sided Master who created Drama and seemed not to desire to have anything to do with instrumental music, even Richard Wagner has turned toward Beethoven as his hero; and indeed, without the great symphonist is the great dramatist not to be understood. The weighty and ever recurring question whether, and to what degree, Music may be dramatic is not to be answered without Beethoven. Here the foundation principles of the symphony are proved to be also those of the drama.

So arise immediately the questions as to music's essence and the limit of its province, and we approach quite near from another side those problems which, through æsthetic reasoning alone, are so difficult to solve.

Now I would like to ask whether there is an educated person to whom all this is of no account or uninteresting? It must be of interest to him, who concerns himself with mental advance. Those who listening to the Eroica, are not charmed and transported, dispute, perhaps about program music and tone-poetry without knowing how deeply into the art's province they may penetrate. Does the Eroica belong to program music? Why did Beethoven originally dedicate it to Napoleon Bonaparte? Is it simply fantasy, imaginative beauty, or has it signification and suggestion? I think the answer to such questions and to similar ones, lead us beyond the purely musical and calls for extended glances toward universal culture. I must expect, however, that professional musicians decline to follow such digressions. Now it is granted that studies in appreciation here suggested as well as historic ones do not concern the practical musician. The artist is, and remains a man of deed; what he is capable of that he does. Nevertheless, I would like to give food for thought to the young and to masters in the tonal art; to ask if they might not bring greater honor to their art as well as to themselves, by becoming more capable of these appreciations of "style" in music. By inducing others to consider and be interested in the Masters and their works. Of course, there is demanded in this connection, inclination and endowment, which should be cultivated and trained. I am convinced that the good results therefrom would be shown in our whole music life. . . . . In word and writing, but above all by personal influence may enthusiasm and understanding of music be aroused and strengthed, not only among a few privileged ones, but throughout the whole land.

THE CALENDAR OF 1901-2.

MONDAY MUSICAL CLUB, FAIRMONT, MINNESOTA.

October—The Violin; French Music.

November—Idealized Dance Music; Scandinavian Music.

December—Wedding Music; Russian Music.

January—Serenades; Scotch Music.

February—Irish Music; National Music.

March—Children's Music; Polish Music; Spring Songs.

April—May Festivals.

The subject presented at each meeting will be illustrated by a program of select musical works, and in addition to the regular club work, Henderson's "Story of Music" will be read during the year.

President—Mrs. R. S. Jackson.

NOTES OF INTEREST.

Handbooks of the two European rooms at the Crosby Brown Collection of Musical Instruments in the Metropolitan Museum of Fine Arts, New York city, will be issued during the early part of the winter; clubs can obtain copies by forwarding address, with twelve cents, to the Museum, 80th street and Fifth avenue, New York City. Beside the above, a fully illustrated handbook of keyboards, with wider margins also, will be published; this will cost a trifle more.

—

The prettiest street in a small Saxon town, formerly called Schönfelder street, is hereafter to be named for the Royal Opera singer, still in the profession, Therese Malten. The tribute has been paid, more especially for her generosity in charitable ways in the neighborhood of the town (Zschieren) and its surroundings.

SCRAPS OF PAPER.

Adopted from the German of Oscar Leeds.

FREDERIC S. LAW.

"Trifles, light as air,
Are to the jealous, confirmations strong
As proofs of holy writ."

Professor Eusebius Anastasius Müller was practicing for a coming course in his study. He was a master on the violin, and his artistic playing of Mendelssohn's concerto could hardly have failed to keep a music-lover entranced at the door, no matter what his urgency might be for entering. It seemed, however, to be an old story with his young and pretty wife, who in some excitement threw the door open without heeding the break she caused in the music. He looked up, at first with an annoyed expression; then, as he recognized his wife, he said with a smile, "What is the matter, Eva?"

"Dr. Bergmann has just called you over the telephone and wants to speak to you."

"Dr. Bergmann!" repeated the professor in surprise. "What can he want?" He laid down his violin and went into the hall, followed by his wife who, as her husband took one of the receivers, with true feminine curiosity, possessed herself of the other.

"Hello, old fellow!" boomed the doctor's deep bass through the instrument. "Can't you come to the Lion this evening and play skat? We need a third man to make up the party."

Professor Müller looked inquiringly at his wife. "Tell him yes," she said quickly, though in a suppressed tone.

He opened his eyes in astonishment. It had always been a trial to her to have him spend an evening away from her and he could not understand why she should be so willing to have him leave her now.

"Man, why don't you answer?" cried the doctor impatiently.

"Tell him yes," again prompted the professor's wife with a smile.

"All right," he answered. "I will come."

"Bravo! That's all," was the reply, and he hung the receiver up.

"You go out so little, my dear," said his wife in an explanatory tone, "and you are so fond of skat. I should really feel guilty to keep you at home."

"But you know that when I am with you——"

"You are a flatterer," she interposed, shaking her finger archly at him as she hastened away.

He shook his head in bewilderment and went back to his study, puzzled over the unexpected liberty vouchsafed him. "Oh, these women!" he said to himself, as he sat down to write. "Who can understand them?"

He had just finished his letter when the door-bell rang. He hastily laid it in a drawer of his secretary, which he locked, and turned to meet a pupil. While he was initiating the new-comer into the mysteries of double-stopping his wife was sitting before her own little writing-table, covered with all sorts of dainty, useless little trifles, also writing a letter.

At six o'clock the lesson was over and the professor, after kissing his wife good-bye, hurried off, first to call on a friend and then to join the skat party at the Lion. Shortly after, his wife entered his study and going to the secretary, searched for an envelope in a portfolio. On this she hastily wrote an address. Then, drawing the letter from her pocket, she was about to put it in the envelope, when her eye fell upon a strip of paper which projected from one of the drawers of the secretary. It was evidently a letter written by her husband; she could distinguish his handwriting. She tried to open the drawer, but it was locked. She then bent over to look at the paper more closely. What she saw must have been something terrifying, for she turned pale and tried, with feverish haste, to draw it from the drawer. It resisted all her efforts and finally tore apart. She read the part which remained in her hand and sank into a chair with a cry of dismay. "The traitor!" she cried, while the tears rolled hotly down her cheeks. Finally she sprang to her feet, took the letter she had written, tore it angrily in half and thrust the pieces into her pocket. She hastened to her own room, but failed to notice that as she swept by the secretary one of the pieces fell to the floor. Arrived in her room, she abandoned herself to her grief. She read over and over again the unlucky slip of paper, and each time her tears flowed anew.

Let us take the author's privilege of looking over her shoulder and of seeing for ourselves the fateful words which have aroused so much unhappiness:

Dear
Your letter
with a heavy heart
to send
I can hardly bear
but needs must.
I should be enraptured
my own, but
I am married
so that I must
be prudent
for the future.
with deep regret,
ever yours,

She could not doubt that this was a letter written by her husband to a sweetheart, and it must be confessed that it was calculated to arouse suspicion in the most unsuspicious of wives.

In the meantime, Professor Müller on his way to the Lion discovered that he had, as it not unfrequently happened, left his purse behind. He therefore went home and hurried up to his study where he found the missing article on the secretary. Taking it up hastily it fell to the floor. Stooping down he saw beside it a strip of paper and picked them up together. As they came into the light he recognized his wife's handwriting on the paper and read it, at first mechanically, then with an expression of the deepest astonishment and anger. Choking with rage, he finally fell heavily into a chair, staring at the unlucky bit of paper which pointed unmistakably to his wife's treachery.

We can hardly wonder at his emotion when we read the tell-tale fragment:

My husband will be out
all the evening.
about eight
come
by the gate,
my husband should
notice anything
would be lost.
Franz—
Fly with me.

"That is the reason she urged me so strongly to go out this evening," he groaned. "Who can trust woman's faith if she can deceive me so villainously? Franz! that cousin of hers—that monkey I have always disliked so much."

From the adjoining room he heard the clear, boyish tones of his eldest son, the seven year old Paul, as he teased his younger brother. "Aha! Karl, I am to take a letter to someone for mamma. Aha! You can't do that." The professor sprang to his feet as though stung by an adder. Thank heaven, it was not too late to save his name, at least, from disgrace; he could still hinder her from leaving his home—he could prevent his child from being the innocent bearer of a guilty message. In the highest excitement he stormed into the room on the other side where he knew he should find his wife. As he entered she sprang to her feet and pointed to the door with the air of a tragedy queen.

"You wretch!" she cried. "How can you dare to face me?"

"Deceitful woman," he thundered. "What language is this to use to an injured husband?"

"Injured husband," she repeated scornfully. "Drop this pretence; it will serve you nothing—all is over between us."

"What," he cried, in astonishment, "do you feel no shame for your deceitful conduct?"

She looked at him in amazement; for a moment neither could find words to express their feelings. Then, as if moved by a common impulse, each reached the other a strip of paper. "Will you deny having written this?" burst from each mouth at the same instant. For a moment there was silence as they read the fragments which had caused such a storm. Then the professor quickly left the room, hurried to his study where he unlocked the drawer and released the missing portion of the sheet which he had written. Armed with this, he again entered the room where his wife stood awaiting him, and without a word, laid it on the table by the side of the other half. In the meantime, she had taken from her pocket the other part of her letter and joined it to the piece which had excited her husband's anger.

A peaceful quiet brooded over the room so lately the scene of anger and jealousy, and as both read they grew thoroughly convinced that their mutual suspicions were utterly groundless. What the wife had in her hand was this:

Dear Friend:
Your letter and the violin came, but
with a heavy heart, I felt obliged
to send it to Schmidt for sale.
I can hardly bear to let it go,
but needs must. I tried it and confess
I should be enraptured if I could call it
my own, but my purse says no. You know
I am married and have a family
so that I must consider well and
be prudent. Economy is my watchword
for the future. I sign myself therefore
with deep regret,
ever yours, EUSEBIUS.

What the husband had before his eyes was this:

HERR SCHMIDT:

My husband will be out, to be gone
all the evening, so send the violin
about eight o'clock, but tell the bearer to
come, not by the front way but
by the gate, for if by any chance
my husband should stay at home and
notice anything the whole surprise
would be lost. Do not forget the songs by
Franz—as well as Mendelssohn's
Fly with me. Sincerely yours,
EVA MULLER.

As they looked up from their reading they fell into each others arms with the cry from each, "Can you forgive me?"

After their transports had abated and their conversation could take an intelligible turn, the professor's wife chided him archly for his unreasonable behavior. "You naughty man," she said, "you spoiled the surprise I had planned for your birthday. When you sent your friend's violin to Schmidt to be sold, I saw how hard it was for you to give it up and knew that nothing would please you better for a birthday present. And how glad I was that I had saved up, little by little, enough to buy it. Paul was to take the note over to Schmidt this evening. I had already told him about it, and he was to send some music I had ordered."

"You dear, innocent creature," he said, with a roguish twinkle in his eye as he stroked her hair. "I had locked up the letter purposely so that you should not know how hard it was for me to let the violin go. Tell me, how did you happen to go to my desk?"

"I wanted an envelope," she said, hesitatingly.

"But the envelopes were in the portfolio and not in the drawer," he retorted.

She grew red and then confessed, "I couldn't help being curious to see what was caught in the drawer," hiding her blushes on his breast.

"Ah!" he laughed, pulling her ear playfully. "You haven't your name for nothing."

A sudden thought struck him. He hastened from the room and went to the telephone where he rang up the Lion. "Tell Dr. Bergmann," he cried into the instrument, "that"—here he hesitated; he could not give his real excuse—"tell him that I have sprained my ankle and—that I am very sorry not to be able to come to play this evening," he concluded.

The curious Eva must have followed him for he suddenly felt his neck encircled by two soft arms and a kiss impressed upon his not unwilling lips. "To the mischief with skat!" was his response as he drew her triumphantly into the study. There he delivered a long lecture on the sin of jealousy in general and of curiosity in particular. It is to be feared, however, that his audience was not deeply impressed with a consciousness of guilt, for a sharp ear at the door would have detected that his discourse was not infrequently interrupted by laughter and the sound of kisses.

"There is in souls a sympathy with sounds,
And as the mind is pitched, the ear is pleased
With melting airs, or martial, brisk or grave;
Some chord in unison with what we hear
Is touched within us and the heart replies.
—*Cowper.*

DELICACY OF FEELING.

In the varieties of touch more depends, no doubt, upon the delicacy of feeling than on the study of passage difficulties, and the feeling is more closely allied to the musical reality than the intellectual insight.—*Kullak.*

FIVE MILLION DOLLARS FOR MUSIC!

JOHN TOWERS.

"This seems an enormous amount of money to expend upon so trivial a matter as music." So remarks, forthwith, the casual and half-informed observer, who is ever ready to give his *ipse dixit* upon every conceivable topic. In this particular case he is entirely out of court, inasmuch as he is talking on a subject of the real and inner meaning of which he has not the faintest conception. In the first place, measured by the immensity of wealth in this great country, and by the far-reaching interests involved, five millions is not an "enormous sum," and, in the second, music is not, by any means, "a trivial matter," when viewed, any how, from a national standpoint. Of course, if life is to be summed up arithmetically as well as dogmatically into the one convenient formula: Get! why all money spent upon anything outside this limited and wholly selfish aim is, to most narrow minds, unconscionably "enormous," and ought to be reprobated and rejected. Then it might, certes, be said, that music has no more claims upon national, or other expenditure, than painting, sculpture, or anything else outside, of course, the ever charmed circle of "getting."

Let us be thankful, however, that the outlook is not near so bad as it at first sight appears. There is, indeed, a silver lining to the gross cloud of materialism by which the fair earth around us, and even the heavens above, seem, at times, almost wholly obscured. Granted, for instance, that we are living in a frightfully materialistic age, when the struggle for gold is keener and far more intense and exacting than ever before, we must not, we cannot close our eyes to the encouraging fact, that the best interests of art of every type and variety, still have their faithful and devoted band of followers, who manfully and valiantly do battle against almost overwhelming odds, to stem the wild current of greed and avarice, and—if a word may be coined to suit the occasion—millionairism, which threatens to swamp everything under its resistless and relentless onrushing. This heroic minority knows, if no one else does, that a nation given up, body and soul, so to say, to the accumulation of the "almighty dollar," is a nation already deeply marked for decay and speedy and premature dissolution. It knows that long before these destructive elements assert themselves, and whilst everything on the surface seems rosy-tinted and perfectly sound and vigorous, there is a canker eating away at the heart, the havoc of which, some fine day when, most likely, least expected, will make its unwelcome presence felt when it is too late to check or restrain its ravages. It is precisely this knowledge which sustains and encourages the individual members of this fated and fateful minority in the unequal struggle in which each, in his own way, is waging against materialism and all its attendant evils, and it is precisely this self-same knowledge which stimulates the devotees of music to hope that the millions needed—be they five, or, be they twice five—to found and endow, in a manner worthy of the richest nation on earth, a truly *National Conservatory of Music*, will be duly forthcoming at the proper moment.

It ought, at least so many think, to be one of the functions and duties of good government to provide accomplishments and refinements for the people in addition to personal security and material well-being and well-doing, but no such large-hearted, broad and liberal-minded, and beneficiently-inclined government has thus far been known on this side the world, nor is likely to be known for some time to come. Under these discouraging circumstances, the individual and collective help of the citizens is the final court of appeal, and, fortunately for the better life of the nation, here, at least, the monetary difficulty is so very insignificant that it hardly need be taken at all into account. Let the matter be but fairly and squarely put before some of the favored citizens of this mighty Republic, who have more millions at their disposal than ever entered into the philosophy of the wealthiest citizens of any other community on earth, ancient or modern, and—the thing is done.

Such munificient donors are, however, before all, business men, and, in giving towards this projected *National Conservatory of Music*, they will assuredly stipulate certain binding conditions, without which, as some of them know from painful experience, the money they donate might just as well be dumped straight into the sea. For instance, in all probability, amongst other things, they will want to see comprehensive plans of the proposed buildings, and to assure themselves that every National demand will therein be adequately met and provided for. They will want to see that while there is no possible loop-hole for waste and extravagance in the managerial arrangements and control, everything shall be done on a scale of amplitude and efficiency worthy of the American people and American honor and reputation. They will want to feel perfectly satisfied that the administration of the affairs of the Conservatory will be placed in the hands of capable and thoroughly representative American men and women, of whom, it may be safely said there is no lack, and that general efficiency be not sacrificed in any way to partisanship favor or narrow-minded prejudice, and least of all to personal greed and aggrandizement. They doubtless will further stipulate that there be duly forthcoming material, or other guarantees that the one hundred boys and the one hundred girls who are to be taken wholly in hand by the Conservatory, for an unbroken period of not less than seven years, and who will be selected after a rigid and impartial competitive examination for superiority of musical talent and ability, and for that alone, from every available corner of the land, will receive, without any fee or charge whatsoever, the very highest and best available training not only in every department of music, but in most of the other branches of human knowledge in which a good all-round citizen should be able to hold his own all the world over.

They will, too, probably stipulate that if they, on their part, undertake to provide the necessary buildings, which besides living, dining, recreation, recital and concert-rooms, will include a compact and fully-equipped opera house, there will be ample subsidization on the part of government—or otherwise—to absolutely guarantee the liberal salaries of every member of the staff and executive and, further, and most important, to provide the means for giving to the student gaining the highest honors in original composition, the *Grand National Prize*, an additional course of three years study in the best schools of Europe, during which period he or she will be able to supplement existing store of knowledge with the best available in the old world, so that while remaining staunch and true Americans in heart and character, said prize students will instinctively, at the same time become thoroughly cosmopolitan in attainments, culture, refinement and polish. They will, in a word, want in return for their princely munificence, the perfect assurance that they will have the great satisfaction of seeing for themselves that by their own act and deed, they have supplied the one thing needful to raise the American nation to as decidedly a prominent position in the world of musical art, as she has in many other directions taken upon herself to assume.

Lastly they will, above all, have the supreme satisfaction of seeing not only a fair sprinkling of really high class executive and creative musicians rise from the fostering wings of the Alma Mater their bounty had provided, but, in addition, a formidable array of well-trained, thoroughly competent and well-equipped teachers, through whose instrumentality again hundreds, nay thousands, of oncoming American citizens will have their hearts cheered, purified, sanctified and ennobled by a wholesome supply of that knowledge, which is always power, of the higher mysteries and beauties of the best possible music to be found on earth, and they will have just cause to thank heaven for having directed their thoughts and inclined their hearts and wills towards the material advancement of the best interests of the purest, the noblest, the most humanizing and the most universal of all the arts outside heaven itself, of which, indeed, it may be said to already form a part, since:

"All we know of the angels,
Is, that they sing and that they love."

"To the composer, music is a lovely dream, a fairy-land of his own creation, a new world of new powers, new strength, new emotions, to him, all satisfying.

He puts the little black dots on the music-paper, lives a few years, and dies, taking all the beautiful fabric his brain has wrought to another world. All we have is a silent yellow sheet, and a dumb instrument under our hands. How shall this voice from the dead reach the heart, the brain, the finger tips of another than its owner? How shall a man dare to say or even sing and play what the fiery soul, the inspired heart of the dead master meant by the writing?"—*From Ethics of Music by Edith V. Eastman.*

INDIVIDUALITY AND SPONTANEITY IN MUSICAL EXPRESSION.

GEORGE HENRY HOWARD.

There is no more hopeful indication of musical progress in America than the evidence of increasing effort on the part of the more thoughtful teachers toward developing the minds of their pupils along lines of conceptive power and individual self-expression. Earnest teachers are not satisfied that their pupils shall play with mere effect. They desire and carefully labor for more than this. The thing beyond this which they seek is the certainty of a habit of thinking music, and thinking it clearly and vividly.

The pupil who has this attainment gathers clear impressions from the music-page in the very first survey of its characters. Little time-pictures, tune-pictures, chord-pictures and whole stories are presented to his eye and mind by means of the signs on the page. Thus in a very short period of practice he gains as much for the mind as for the fingers and hand, and indeed far more. This which the mind now possesses is a picture which becomes more and more real and filled with living impulse. The degree of this vividness and impelling force depends upon the thoughtfulness, earnestness and intelligence of the student.

Individuality and spontaneity in expression come from, and are the natural outgrowth of this conceptive habit of study and practice. The mind and heart which are *full* of fine conceptions, must and will seek utterance. The very fact that they *are* full impels the utterance and gives spontaneity. There is no room for the commonplace, conventional or enforced, but the whole performance seems as fresh, individualized and inspiring as if it were the players own creation.

How shall our piano playing, singing, and organ playing become less conventional, more characteristic, more spontaneous, more self-expressive? Is it not necessary to train students into scholarly habits, tastes and character? Is it not needful that the teacher should more and more inculcate the necessity of being and knowing as well as doing? *Time for reflection in the midst of the practice hour. time to grapple with the great music-thought which proves elusive, is one essential to be insisted upon.*

Another essential of equal importance is periodic reviews in the study of master works for the purpose of mental assimilation and maturity of conception.

Intellectuality, conviction and character form the foundation of strong temperament, individuality and spontaneity in all instrumental or vocal expression.

Not far from Dresden, in the Plauen'sche Grund, there lies an old tavern, "Zum Steiger," which recently celebrated the hundredth anniversary of its erection. To commemorate this event a little Festschrift was published which contains interesting details regarding Wagner's flight, in 1849, from Dresden for participating in the revolutionary uprising. It was on the 9th of May that the hostess suddenly heard rifle-shots in the neighborhood. A moment later a man whose face and hands were blackened with gunpowder rushed into the tavern, and exclaimed: "For heaven's sake, some water to wash myself at once, and pack up some bread and meat for me, but as quickly as possible, for a minute's delay may prove my death." He promised to pay for it later, as he hadn't a penny. She remembered having seen him before, so she gave him the food and also the guide he asked for to lead him through the densest part of the woods to Freiberg.

Fourteen years later, in the summer of 1863, an elegantly dressed man walked into the tavern, with the air of one who was at home there. "Good morning, Frau Wirthin," he exclaimed; "I have come at last to pay my debts." The hostess shook her head, though his features seemed familiar. "To be sure, it's a long time since," he continued. "But I have not forgotten what great services you rendered me fourteen years ago, on the 9th of May." "Heavens!" she exclaimed, "the small blackened man, who couldn't pay for his lunch!" "The same," said the visitor laughing. He then paid the bill—six neugroschen—and added: "There! Now I have got rid of this debt which has so long oppressed me; but that you may know who it is that has so long been your debtor, let me introduce myself as the former Saxon court-conductor, recently amnestied by the King—Richard Wagner." He must have enjoyed this denouément, which, in a humorous way, resembled the tragic scenes in which the Flying Dutchman and Lohengrin reveal their identity.—*New York Evening Post.*

VIOLIN STUDY—PRACTICAL SUGGESTIONS.

EDITH LYNWOOD WINN.

The ancestry of the violin, as a type of stringed instrument played with a bow, goes back to the earliest antiquity. Oriental and other writers refer to it as necessary to the development of other forms of music. Indeed, it was not possible to perfect the symphony, the highest form of musical composition, until instruments of the viol tribe were perfected.

"The violin," says a well-known critic, "is, without doubt, a nobler instrument than the human voice, first, because of the greater range of its effects, and, secondly, because of its power to express every emotion of the human heart."

Miss Lillian Shattuck, of Boston, has prepared a book of scale bowings, both fascinating and practical. Her pupils spend from twenty minutes to half an hour daily in these scale bowings, and the results obtained are very fine. Seventy-five different bowings of the G scale in three octaves must, of necessity, if carefully practiced, give one a command of the most important bowings in use, at the same time increasing one's facility in execution and one's quickness in changing rhythm. Miss Shattuck's pupils always stand before the mirror when practicing these scales and they develop a beautiful tone by this careful method of practice. No tone can be beautiful and smooth unless the bow strikes the strings at right angles and at a uniform distance of about one inch from the bridge.

I do not believe that beauty of tone depends upon talent. It owes more to scale practice systematically done. Tone and tone-shading are too different things but, given talent, the pupil who practices the following scale bowings cannot fail to give something more to her playing than mere tone:

Crescendo and Diminuendo.

(1) Whole notes, bow to each, count eight. Cres. and dim. in each bow.
(2) Same as (1) commence *ff*.
(3) Same as (1) cres. and dim. twice in each bow.
(4) Same as (3) commence *ff*.
(5) Whole notes, bow to each, cres. on down bow, dim. on up bow.
(6) Whole notes, bow to each, cres on up bow, dim. on down bow.

Practice these in three octaves with the major scales. In crescendo and diminuendo work the distance of the hair from the bridge is governed by the effect desired. Generally a large tone is produced near the bridge, while a pianissimo tone is secured about an inch and a half from the bridge. The pressure of the forefinger also governs or determines the power and gradations of tone.

During an entire Summer I kept a pupil on scale bowing and violti duos. The succeeding Winter the same pupil devoted two and a half hours a day to practice and, out of that time, half an hour a day to scales. At my Spring concert this pupil, although she is but sixteen years of age and a high school pupil, distinguished herself.

In Germany children spend six months (with a good teacher) upon the G scale. The F♯ major scale in three octaves is the favorite one of artists. I have practiced it faithfully for five years and have never, until recently, been able to hold the thumb in place on the neck of the violin. It invariably became necessary for me to remove the thumb altogether from the neck and cling to the body of my violin. By continuous practice I have been able, even with a small hand, to overcome the difficulty by bringing my elbow further under the violin and placing my fingers more erect upon the strings in the last octave.

Professor Joachim, the eminent Berlin violinist, says that every student, who wishes to become an artist, should spend one hour a day on careful scale practice. Julius Eichberg, who was once my teacher, and who first gave me a desire to master my instrument, laid great stress upon scale practice and finger technique. His method is full of valuable suggestions. He suggests that a student practice certain kinds of bowings and left hand technique several hours daily. *That* few Americans can or will do. I once failed in a technical passage. Mr. Eichberg remarked, dryly, "You never spend time enough on details; why I played that at twelve years of age."

"In how many ways may a single passage be bowed, Mr. Eichberg," I once asked. "I will show you a passage which may be bowed in fifty-four different ways," he replied, and, because I was fascinated by it, he slyly remarked that I had better study "Tartini's Art of Bowing." I did so, and never did I study that composition again nor hear it, until one day it awoke to life—in Berlin—under the skilled fingers of César Thomson. I have never despised Tartini since, and every day the old master appeals to me with greater force.

I have wondered why Willie Burmeister and Kreisler and Marteau cared to place Paganini on their programs. When we realize how much the violin world owes to Paganini's discoveries, as to its technical possibilities, we need not wonder that it is fascinating work to revive his compositions, even if they do no longer appeal to the public, save by their qualities of "fireworks."

No instrument can compare with the violin in its wonderful harmonic effects and double-stops. Paganini knew it. We are much amused when we hear other artists play his compositions, that anyone could have thought the great artist was a wizard and a sorcerer in his day. How the world moves on!

The violin is the very vital principle of the orchestra. We cannot, as teachers, lay too much importance upon orchestra work. Recently I requested all of my pupils to study ensemble and orchestra work and I had the pleasure of knowing that, although some of them played feebly in the Haydn Symphony, as played by seventy ladies in Chickering Hall, they had at least learned to feel the inspiration of a good baton. Miss Nichols, the manager of the Boston Vadettes, invited professional players to play with her orchestra during their stay in Boston. Several professional lady violinists responded. Even professionals are glad of an opportunity to play such compositions as the Schubert Unfinished Symphony and the Bach Double Concerto with an orchestra in which there is a fair proportion of wood, wind and stringed instruments. One drawback to the thoroughness of a lady violinist's education is that she is so often debarred from orchestra and quartet work.

In the public schools of Germany music is a very important study. Not every school has an organ or piano, but it is not an uncommon sight to behold the school teacher accompanying his or her pupils with a violin. Indeed, at the Normal School, in Strasburg, it is necessary that all students take violin lessons. They are taught in classes of about fourteen pupils, and when they go out to teach they have a sufficient knowledge of the rudiments to accompany their pupils when they sing. Many teachers have no voices and the violin is a very great aid to such in their teaching.

The greatest musical geniuses have immortalized the violin by writing some of their best works for the instrument. In order to do this they must have had some intimate knowledge of the instrument. Mozart, Beethoven, Händel, Haydn, Stradella, Cramer, Hummel, Ries, Bach and Rameau played the violin in their youth. Theodore Thomas, Emil Paur and many others of our best conductors found a study of the instrument a pleasure and a necessity. Marcella Sembrich, that gifted singer, played the violin so well that Professor Joachim advised her to cultivate her talent.

Kings and emperors have found the violin fascinating. Charles, of Spain, who was an excellent player, once asked a celebrated violinist whether he, the king, or his relative, the Emperor of Austria, played with more taste. The wary violinist replied, "Sire, allow me to say that you play the violin like a king, while your Austrian cousin plays like an emperor!" Was not that court diplomacy?

The Queen of Roumania and the ill-fated Empress of Austria were patrons of music and both gave substantial aid to gifted violinists.

Royalty has been exceedingly liberal to violinists. Kings have loaned valuable violins to virtuosos. Queens have sold their diamonds that some protegé might have a "Strad." At the Joachim jubilee in Berlin, two years ago, there were one hundred and forty "Strads" in the orchestra which came to pay homage to the great violinist.

Ysaye owns the famous "Emperor Strad." Two years ago I found a celebrated "Grand Pattern Strad." in the work-shop of Herr Hamig, in Berlin. "I bought it from the Czar of Russia," he said, "and it is worth only 30,000 marks ($7,500)."

Professor Joachim has three valuable instruments; one which he values very much was the property of his first teacher, and Joachim found the instrument years after the death of his old teacher in the hands of a musician in Sweden. London friends gave Joachim a beautiful violin some years ago, but I believe that this instrument is an Amati. Gregarowitsch has a beautiful "Strad." presented to him by the Czar of Russia. Henry Marteau has a fine Maggini.

Undoubtedly a fine violin is a great aid to a great artist.

The perfection of the violin made the development of the opera and the higher forms of music possible. With the perfecting of the violin, the viola, the 'cello and bass, came the necessity for ensemble music. Perhaps the latter came first and the perfecting of the instruments later. At any rate, the two seemed to go hand in hand. To-day is the day of chamber music. Ries, Raff, Tschaikowsky, Gade and others have followed Haydn, Mozart, Beethoven and the other great masters. Even American composers are striving to emulate each other in quartet composition.

Abroad I like the Joachim Quartet and the Bohemian Quartet above all others. I have never heard the Florentine Quartet, and I do not think that the French school lays as much stress on quartet work as the German school does. I have never heard a French quartet, however.

The Kneisel Quartet is hardly a quartet in the strictest sense of the word. Mr. Kneisel *leads* and I cannot detect any individuality in the work of the other three members. The Spiering Quartet, of Chicago, the Kaltenburg Quartet, of New York, and the Adamowski Quartet, of Boston, are the only other quartets composed of men whom I have heard in this country.

There are several ladies' quartets in America now—the Eichberg Quartet, compossed of Misses Shattuck, Daniel, Grebe and Webster (all representatives of the Royal High School, Berlin), do very excellent work. Abroad I heard one very fine ladies' quartet. It was that of Marie Soldat Roger (formerly a star pupil of Joachim) and her associates, whose names I do not remember.

Do you remember the quartet work of Ysaye, Marteau, Max Bendix and Gerardy? I was much impressed with the individuality and sympathy of their work. They seemed to throw themselves each into the mood of the other. I have said that the time is coming when chamber music will take the lead in this country. During this last year several pianists and singers have given up prospective concert tours and, in one instance, in Boston, money was refunded at the box-office of Symphony Hall, because a certain artist's non-success cut short his concerts. No quartet worthy of the name has made a signal failure. Is that significant?

NO TIME.

This ancient and modern complaint—not time enough—all day, and no time!

All through my youth this thought, mostly borrowed from others, saddened me—that there was so little time to do anything, no time to develop in bloom our desires. When, lo, it comes to me suddenly, after years of time wasted in lamenting over this thought. How much time I have, and of how little time it really takes to accomplish anything, if one only really employs every moment wisely. Why, just devote ten minutes a day to any piece of work and great improvement you could see in a very short lapse of time.

Three hundred and sixty-five times every year we may bloom anew—fresh, true and sweet with the morning. All day and no time? One day is a lifetime, a night a death, and every morning a resurrection. Working our noon-day faithfully through. The dusk of evening forgiving our sins. A death of oblivion is night for our mistakes, and the morn a resurrection for us all. In all this, not time enough? Yes, enough to carry on all of which we may become capable. Wake up, then! and improve your time.—*F. S. P.*

PLAYING FROM MEMORY.

Whether it be done out of charlatanism or daring, it is always a proof of uncommon musical powers. Wherefore the prompter's box, the dancer's leaden soles, when the brain is winged? Do we not know that a chord played from notes, no matter how freely, is yet never half so free as one that is played note and fancy free? We are alike; and I, though I am a German, and consequently wedded to tradition, I too should be astonished, could I see the reader, actor, *danseuse*, produce his or her written part in public, in order to execute it with more certainty; and yet I, too, am like the pedant, who, seeing a virtuoso quietly continue playing when his music had fallen from his desk, cried out in hot excitement, "Look, look, that is indeed art! He knows it by heart!"—*Schumann.*

ADVERTISING.

CONSTANTIN VON STERNBERG.

Was there ever an age richer than the present in characterizing features? I seriously doubt it. There are steam, electricity, pneumatics; the Occident's obtrusively loving approach to the Orient; an ever-growing religious tolerance everywhere, except in the churches; machinery for the saving of time, thought, and, incidentally, salaries; the rapid acquisition of unprecedented and often unmerited wealth, with its attendant shoddyism and vulgarity. These and many other phases of life at the present day are undoubtedly peculiar to our time. None of them, however, has developed to such exuberant luxuriance; none of them so powerfully affects all strata of society; none of them gives so just a cause for serious alarm in regard to the stability of moral principles, as the arch feature of our time—*Advertising!* If our civilization were suddenly wiped out by some awful cataclysm and the archæologists of the third or fourth millenium should excavate one of our present business streets, hitting perchance upon a newsboy with some still decipherable papers in his bag, they would undoubtedly dub our era *the age of advertising*. It is the most conspicuous trait of our time and if it continues its ratio of increase proportionate to that of the last decades, it must inevitably develop into an epidemical mania, extending over the entire civilized world, if it has not already done so.

Of course, some measure of advertising has always existed, and in a legitimate form it always must exist. Commerce could not do without it, neither could governments. People must be informed of trading opportunities and apprised of the affairs of their commonwealth. That is self-evident. But, oh, if advertising would only stop there! If it had only retained its legitimate, open, unmasked, honest aspect!

Alas! it has not. It has degenerated into a subtle, crafty, deceitful artifice—I came near saying art—serving all sorts of purposes, occasionally even honest ones. Its service is no longer confined to institutions, such as governments, commerce, science and art, but has debased itself to the purely personal affairs and vanities of individuals, and it is employed by them with a determination which stops at nothing and hesitates at precious little. It has already robbed life of privacy, one of its sweetest delights, and hospitality of unselfishness, its chief charm It has vanquished much freshly budding gentility and much modesty, both masculine and maidenly. It has perverted much parental solicitude. It has debased and distinctly vulgarized sentiment and feeling in general. It has disfigured, desecrated the holiness of nature wherever humanity is likely to seek repose and pleasure in its beauty. It has defiled the approaches to all our beautiful towns and cities. It will end—where?

The vanity of Miss Jones, who advertises her return from a "delightful visit in Podunc," is not so very bad; it only bores us When Mr. Smith records it in the public prints that he drank a cup of tea in the house of a friend, he makes us weary of both him and his friend, not counting the others who were "among those present." It is a much more serious matter to see young girls, about to enter matrimony, publish minute accounts of their trousseaus, and the matter looks still more alarming when we reflect that their mothers must have consented to the publication. Women, who by their wealth and station are exempt from the bane of being stared at by the *hoi polloi*, deliberately court this annoyance by publishing their pictures in the newspapers, and this sometimes in poses to which a comic opera actress consents only under the stress of her manager's business interest, if at all.

The logical sequence of this unspeakable vulgarity must, sooner or later, bring us face to face with such items of interest as:

"Mr. Brown left the house of his fiancée last night at half-past thirteen. The parting kiss lasted fifty-three seconds. Among those present were, etc., etc."

Or, "Mr. Green has looked somewhat melancholy of late. Last night his friend White loaned him twenty dollars without security. Mr. Green looks happier."

Or, "Miss Budding's coming out in society last night was one of the most brilliant events of the season. She looked radiantly beautiful. Weight, 115 pounds. Olive complexion. Shoes, No. 3½. Gloves, No. 5. Bust measure, 39. Obj., mat."

The vista of possibilities in such surreptitious advertising could give one the goose-flesh of disgust and the resignation of despair, were it not for the empiric consolation that all wrong carries its own doom with it. Surreptitious advertising is bound to kill itself and decency of sentiment must prevail in the end, whenever that comes. In the meantime the evil, like the measles, must run its sickening course, and no aggressive measure can stop it.

There is, however, such a thing as passive resistance and this, in time, might prove an applicable and effective check. Surreptitious advertising is and should forever be discountenanced by thinking people, quietly but unrelentingly. Those who consecrate their lives to abstract—or let me at least say impersonal—thought; those who prefer doing some*thing* to doing some*body;* dealers in intangible goods; in one word, professional people. They are the ones from whom salvation must and, I am glad to add, may be expected. I say this in full cognizance of the circumstance that *some* physicians, *some* lawyers and, alas, *some* clergymen stoop to surreptitious advertising and do not even restrict themselves to the press. My hope, however, does not repose in quacks, shysters or mercenary notoriety hunters, but in persons of respected standing in their professions. Men and women in the higher walks of professional life do not advertise, neither surreptitiously nor otherwise; and it cheers my heart to observe that music teachers, too, practice a dignified restraint in this respect.

Restraint need not stiffen into puritanic abstinence. A wholesale condemnation of advertising should be absurd. Just as in some States the carrying of a revolver *openly* constitutes no crime, so is a frank and simple announcement of one's name, address and occupation perfectly legitimate. Many of us music teachers have no access to the musical public through concerts or compositions and are therefore obliged to place and keep our "card" in the local papers.

It is quite true that the seekers after professional services never consult a newspaper *primarily* and that their selection of a physician or music teacher is invariably influenced by the recommendations of their friends and neighbors. Still, these good folk, who may know their favorite's name, personality and merits well enough may, nevertheless, have forgotten his exact house number and may be utterly ignorant of that portion of his skill which they themselves had no occasion to employ. Advertising, therefore, is quite legitimate to professional people, because it is necessary until their growing renown, reputation, celebrity or fame lifts them above it.

In order to be legitimate, however, *an advertisement should never contain an incentive to comparison nor offer an inducement.* The first precludes the mention of one's terms in the newspapers; it is in bad taste. The other smacks of mendicancy to boot. Underbidding is as unprofessional as the proffering of a premium in any form.

There is a music school which advertises itself as "the leading music school"—if that "lead" had a following, good taste should soon be among the lost arts. Still, even this vulgarism can claim the mitigating circumstance of open- (if not bare-) facedness. There are far worse methods, proceeding anonymously or under the flimsy shelter of a complaisant reporter's name; methods in which some professional people utilize anything and everything for the purpose of "keeping their name before the public." The visit of a private acquaintance; the dire calamity of a sick headache; an increase in their family; even the quality of their work—the sole true medium of reputation building—they will relegate it to the domain of surreptitious advertising.

There are, for example, *some* teachers who persistently and incessantly parade their pupils before the public. They invite a sometimes large audience to hear what, at its level best, can only interest the pupil himself and, let us say, his fond parents. The latter, though, could hear this music surely much better at home where they could offer a culinary compensation to their kind, self-sacrificing friends.

I know perfectly well that teachers of any kind owe it to the parents of their pupils to give some sort of demonstration of the latter's progress. It has become customary to make these affairs public. Some teachers, however, are so lavish in this matter that their pupils—whom they rather *drill* than teach—must be in a chronic state of concert preparation, which is equivalent to a constant interruption of real study.

Nor can I approve of it that such pupil-concerts are discussed in the newspapers. Public mention in the Art columns should be the well-deserved prerogative of the *Artist* and when it is wasted upon *pupils* it is apt to result in an undue dilation of their hat bands.

It is but natural that incapable teachers, unable to awaken in their pupils a love of music for its own dear sake, should resort to the dodge of stimulating their vanity by administering the harmful narcotic of publicity, but men and women of ability should not follow such an unfortunate and vulgar lead. This is not said in a dogmatizing spirit, because the utilizing of one's pupils for advertising purposes is largely a matter of conscience. My frank expression, however, may help some brother teacher to restore the force of his ethics which might have been imperiled by the surreptitious advertising of one of his colleagues.

A friend of mine, in the legal profession, recently epitomized the whole matter of advertising in three words. When I casually mentioned to him that a certain lawyer advertised a good deal of late, my friend replied: "He has to." My friend did not "have to"; that is all there is to it.

One word, the parting salute as it were, should be given to the thoroughgoing, middle-of-the-road worshipper of indiscriminate advertising. As children play with a toy compass until it gets out of order, so there are grown folks who toy with the compass of their conscience until their heart grows dull and ceases to be a reliable pivot for the active magnet of honesty, that ever points but one way. They grow cynical and naturally judge others by their own ethics. As *they* would do no kindly deed unless they derived a large advertisement from it, so they scent advertising in everything that others do. They lose all discernment between fame and notoriety; between honorable merit and wily stratagem; between the just reward of honest work and the loot of greedy mercenariness. They know not the joy of congenial work; not the pleasure of giving; not the blessing of hospitable friendship; not the impelling force of even a small truth when it reveals itself to the searching mind. They know of no nobler motive, no higher aim, no more glorious achievement than *Advertising!* It is their fetish and also their pet ghost which they believe to see everywhere, behind every noble impulse, in every generous act. They will not hesitate to suspect and to voice their suspicion, that Raphael painted his "Sedia," Beethoven wrote his "Eroica" for advertisement.

For such cynics there is no help, nor against them; but the bellowing of such arch-vulgarians need not ruffle any honest man's serenity. Genius has sometimes suffered from a lack of common prudence in the management of finances, but the mismanagement does not alter the fact that Genius did receive a reward, and so will every honest worker. There is fame and fortune in store for a few only, but a local reputation and a competency for many; the distinguishing element must ever lie in the calibre of the man and this no amount of advertising can change.

The just and sometimes tardy reward—such is life—has to be patiently awaited and must not be rapaciously extorted from fate by the ruses, tricks and vulgarities of surreptitious advertising. To "help luck along" is a damnable euphemism, called *corriger la fortune* by the French who, with correct instinct, apply it to cheating at cards; but all the euphemisms in the dictionary of oblique morals cannot save card cheating from being a social crime, the smallest penalty of which is ostracism for life—and surreptitious advertising should be similarly punished.

Let professional people *announce* their name, address and occupation in the newspapers and magazines, but let the quality of their work do the rest of their advertising. And let those among them, who are willing to brazenly prostitute their personal dignity for money-getting, remember that they are not free to do this without impairing the dignity of their whole profession, because people will always measure the strength of a chain by its weakest link.

Music, or, to speak with more precision, a musical work, is more than a work, it is a thing of proportions—almost a being, collective and social; the terms alone of the musical language—accord, harmony, concert—prove this. In music, moreover, as in architecture, the elements are united by relations of mathematical precision; but while, as in architecture, the combinations or groups so formed are inanimate and dumb, these of music move and speak, or rather sing, possessing thus a twofold life, for which we search in vain in the most beautiful shapes of marble and stone. All music is thus socially alive; even an isolated melody is multiple, in the sense that it is constituted of periods—members of a phrase repeating themselves—ever separating and reuniting.—*Camille Bellaigue.*

THE VOICE

MR. FRANK HERBERT TUBBS, Associate Editor.

With this issue we continue the series of answers to inquiries. We have been running articles of a pedagogic nature from which material for study has been derived. Now we purpose giving a very practical trend to this department by answering questions sent us by teachers and students. This instalment shows the helpful character of this department. We will welcome inquiries from all who desire help.—Editor of THE MUSICIAN.

INQUIRER'S DEPARTMENT.

FRANK H. TUBBS.

My teacher says voices can be trained only in Italy. Has the Italian climate anything to do with it?

Not the slightest. Voices can be trained wherever there is a teacher who knows how to train them If the teacher above quoted speaks from his own experience, it is confession that he cannot train voices. If he merely quotes an oft-repeated saying he still clings to an exploded idea. Italians are natural singers because their language lends itself to easy flow of tone and they have been, unconsciously, training the singing organs in the right way from childhood. We Americans at adult age must bring ourselves to the point, by practice, where the Italian adult finds himself by nature.

Some years ago a company was formed to import Italian air for the use of singers. It did not do business long. It may be that air greatly charged with oxygen would be specially good for the voice. Selling pure oxygen has also been tried, and has not had great demand. Gain, however, came, not because of the better air but because the general condition of the body was improved and one could therefore sing better.

In our country there is every variety of climate. In many sections there are exactly the same climatic conditions to be found in Italy. If climate made any difference we might expect the great singers to come from Colorado or the dry plains of Arizona. At some time they may come from there, but it will be because good teachers settle there and not from the climate.

Of the Americans who go to Italy to study far more of them have their voices injured than improved. That is because the teaching is not adapted to English speaking voices. The truth is, if a person has the right knowledge of how to train the voice, he can do it in one place as well as in another.

●

You speak against using trifling music; cannot children best be taught to love good music by hearing easy music?

Educators used to say that people would learn to love good literature by being coaxed into reading novels. Statistics from the public libraries show that novel readers always remain novel readers. It may be that they grow somewhat more critical of the novels, and like only the best, after many years, but they do not pass out of their class.

The parallel between readers and singers is not exact but there is analogy. Students who are given trifling music never want any other. Mind you, there is great difference between trifling music and easy music. By trifling music I mean that which has rhythm and jingle only and lacks ideas which amplify the meaning of the text. If we ask most young people to sing, they can give us coon songs or like trifles. When a group of young people get together in the evening they will sing, and what do they know to sing? The popular songs of the day and these have no saving merit. They please for the moment but they appeal to nothing deep. Their use can never lead the young to appreciation of anything better. Use of it dulls appreciation of better.

It is not hard to get pupils to know good from bad, and when they are able to pick the good they will avoid the bad. In this we see the duty of teachers. Education is something apart from training. The latter has to do with physical development, but the former deals with acquirement of knowledge and the application of that knowledge to intellectual use. Training cannot be ignored but it can be, and is, used by most teachers to the exclusion of education.

To understand good music students must know the structure of music. Of course, it would be unreasonable to show the form of a symphony before small (or call them easy) compositions are understood. Nor would it be wise to analyze an oratorio before showing how songs are to be known. More than that, the analysis of Beethoven's "Adelaide," or the "Loreley" would not be wise until lighter (call them easy) songs were understood. I could go a step more toward the start and say that vocalizes should be taken up first.

It is outside the province of an answer to the question, but I would urge teachers to gather their pupils for instruction in song form as a means to leading them to appreciate good music. We all hold recitals and sing good music at them. We trust that students, by having such, will come to love it. But recitals have instruction so mixed up with personalities, with social thought and dress display, that education is lost. I would not lessen the recitals but increase the instruction classes.

●

Do professional singers pay for a reputation?

This question is asked in all sincerity by one who has studied in a small city and has sung there for years, and who now wants to become a professional singer in a large city. She had written a manager who had replied that he would need $500 to make her a reputation. It is a question which has personal interest to all who anticipate entering professional ranks.

Nearly all the "puffs" of new singers are paid for. It may be the singer has great merit and the reverse may be true. If she has the paid-for puffs call attention to her and she attains permanent prominence. After that the "puffs" may not be paid for. One who has merit and can wait for years to have that known need not pay for reputation. But it is a long and slow road to the reputation which one needs to make engagements come thick and fast. Now and then a wonderful voice and grand singing bursts into notice. Such cases are rare and something must be done to get a first hearing. After a great success managers are only too glad to engage the singer at his own terms and they will, as an investment, pay out the money needed to make the reputation. But it is like a publisher accepting a manuscript: He may like the story himself but the public may not. There is a chance which most publishers hesitate about taking. Just so is the manager placed. When he has heard a singer and believes she has "money in her," he does not wish to risk much on an uncertainty. It brings it round to this: Most singers do pay to obtain notice and name and they would better do so, if they can, than to wait long years to build up on merit alone.

●

Should the word "touch" be applied to voice culture?

We are familiar with that word in piano study and we may use it in voice training. Probably when first used by pianists it referred to the mechanical act of striking the key with the finger, but it has now grown to express the idea of delicacy of tone. That idea applies to tone emission of the voice perfectly well. The pianist who obtains smooth and velvety tones because of the delicacy of finger touch does just what the singer does when he obtains the corresponding velvety quality in the voice. As everybody knows what the word means in one case he may know in the other.

The word "touch" is synonymous with good quality, but expresses more definite meaning to the average student than does the latter. Where a word conveys the idea, use that word, and do not think that because a certain word has been generally employed by the pianist that it may not be by the vocalist.

●

Please tell us how tone used in singing is made? That is, what process gives the sound?

All sound, including musical tone, is made by some manner of vibration. The theory which has long been held by scientific men regarding the tone of the voice is that the vocal chords, which are two little strips of flesh within the larynx (Adam's apple) are vibrated by the pressure of air from the lungs. One class of theorists say the vocal chords act like a string and by their swing caused pulsations which may be heard. Others say that the air passing through the vocal bands set up vibration. The former manner would be illustrated by the swing of a violin string, and the latter by an organ pipe. The theory most commonly accepted is that the vocal chords act in about the same way that a string on the violin does. To the editor this theory seems very unreasonable, but as he cannot advance another which can be demonstrated, he doesn't propose to attack those who believe the accepted theory. In answer to the question he gives accepted belief.

Further, and perhaps clearer, explanation would be this: When one is about to make a tone, the vocal chords spring across the throat intercepting the upward movement of air from the lungs. As the vocal chords completely arrest that upward movement, momentarily, there is a slight degree of compression of air just below the bands. This compression is strong enough to burst through the bands in a little puff. That occupies only a small fraction of a second. This act is repeated again and again. The rapidity of vibration is beyond comprehension. The note A, in the middle of the soprano voice, demands 435 of these vibrations per second. We can hardly conceive the possibility of such rapid movement of two bands of flesh. This is why the editor does not believe the scientific gentlemen are right. Then, the upper A, which all sopranos sing, requires double the number of vibrations which the middle A has, or 870. To think that flesh moves so rapidly requires some little faith. But that is the way we are told the tones of the voice are made. Something must vibrate that number of times, within the larynx, to give the pitch of those notes. We incline to think that no one as yet knows what does the vibrating and that it remains for future demonstrators to reveal the truth.

It is not necessary to know what vibrates and how it vibrates in order to sing. Hardly anything about the finer working of the body is known, yet we all use the body. What causes the food to be pushed downward in the back of the mouth no one knows, but we all take food and swallow it. Some wise man may appear at some time who will explain these mysteries. They present field for speculation and certain it is that it is all speculation at present.

Dr. Wilford Hall advanced the theory some years ago that tone is something which is present everywhere and in everything, and that by percussion of something in the vocal bands the resident tone was made manifest. It seems plausible and presents an idea which may be worked out into a demonstrable process at some time. The rapidity of vibration of the electric current is well known now and the knowledge of that makes it possible to admit that there may be a mechanism in the larynx such as is employed in electric machines. But who can show us what the machine is and how it works? The whole is so complicated and subtle that few, if any, wish to give time to the practical demonstration which could make the matter clear to the average mind. It must, again, be grouped with the mysteries.

●

I can sing high C, but when I swell from a soft tone into a large one there is a distinct break: how can I avoid it?

The practice needed to overcome the defect is not to be had on the notes of the high voice. All the organs of the voice, or those which influence tone production, need more training. When the voice is used in connection with such training it is better to use it in the lower half of the voice. The respiratory organs must be worked more and the larynx must be given more freedom of action. The tongue and organs of speech must be liberated. The tongue must lie very high. Secure the ability to start tone on all vowels with the tongue in high position and get so as to continue tone without any dropping of the tongue. Then use little runs with the vowel "ah" into the high voice. When these can be used with great ease begin the practice of swelling the notes of the upper voice. The first note to use the swell upon is F. Then on G, and so proceed gradually upward until the highest notes are reached. Do not hasten the practice. It is better to acquire the habit of making the upper tones gradually. Too much speed will bring back the trouble. Very little practice on the high notes should be indulged in at one time.

At one time my voice, which is soprano, was even throughout. For two years the notes from C to F (upper part of staff) have been very weak. How can I strengthen them?

Complaints like this come so frequently and the same trouble occurs in cases which come for personal instruction, that I am inclined to believe it to be the part of the soprano voice which first shows wear. A voice may have been perfectly cultivated, but if anything happens to the voice the effect is most felt in the part described. These notes in the soprano constitute the upper medium voice. They are made, so far as the larynx is concerned, by vibration of the fine inner edge of the vocal chords. The stronger muscles of the chords, back near the cricoid cartilege, have very little action in making these notes. Because of this location of tone production is why wear or wrong use shows these first. One may well receive warning when these notes show weakness and call for the remedy.

Many years ago I called attention to this failure, consulting Mr. Behnke and Mr. Shakespeare about it. Neither had observed it. It is possible that it is more frequent with us than it is in Europe. Certainly it does come to our singers.

The remedy which I have effectively used with private pupils, and let me say that it was not suggested by the eminent London teachers mentioned, is "Stop all practice on those notes, temporarily; strengthen the breathing muscles; make more elastic the organs of articulation; practice in lower voice the vowel sounds 'oo' and 'oh'; and, then sing runs of five notes and the scales up and down the whole voice." That treatment has always been effective in restoring the weakened upper medium voice. If one will be faithful to continued daily practice the voice will be restored in two or three weeks. Too much emphasis cannot be laid upon the necessity for less work on the fine edges of the vocal bands in this case. Strengthening the breathing muscles is purely to withdraw pressures from below the vocal chords. And to recover those notes in their fulness and beauty it is absolutely necessary to remove that pressure. Pupils are so lazy—no, let us not put it that way—pupils realize too little the need of physical drill for the breathing machine that they will do little practice in that direction. They feel content to get able to use the diaphragm and connecting muscles right, forgetting that that is only the first step. After one can use them aright he must use them, and that every day. Occasional practice with them will not suffice. There must be direct practice with them every day. To be sure, many singers say it is not necessary, but they supply the people whose voices are giving out. Generally they are ashamed to confess vocal failure and stop singing entirely.

A word about practice upon "oo" and "oh." Speak one of these vowels many times in conversational tone and see the way it vibrates the whole inner mouth quite out to the lips. Now secure just that vibration while singing that vowel sound. Then proceed from that vowel into "ah," seeking to keep the same poise of voice. If quality changes or if tone slips back from the lips it is wrong. Generally the reason it does so is because the breath control has collapsed. But one must become able to proceed from "oo" and "oh" to anything else and not have the slightest collapse or change of quality. It is not best to sing into the part of the voice which has weak notes, until one can do that.

The value of the runs through the voice lies in the lightness of the singing. It is not taxing upon the voice to sing runs. That is, no strain comes from it. But it brings into use all the parts of the larynx in their proper places. The early Italian singers who made renown exercised constantly upon runs. Some of the music which they became able to sing astonishes us, and we wonder how they did it. Only by "eternal vigilance" could they have mastered it.

This chat upon the way to bring back those weak notes would not be complete did I not refer once more to the possibility of restoring the voice always. The sad abandonment of singing by many who have really great talent at just the time that they could the best is to be deplored.

●

Does quality or power make the more "secondary vibration"?

Neither makes vibration of the chambers of secondary resonance. I suspect that the question was asked from the thought, "Possibly if I put more effort or vigor into my tone I will get more resonance in the chambers of the nose and mouth." But more force or more powerful singing will, in most voices, call for more tension on the organs and that tension will lessen, instead of increase, the forward vibration. Getting that forward vibration consists of bringing into use parts which, in the untrained voice, do not vibrate at all. A beginner makes all his tone in and by the throat. An artist calls into use vibration of the chambers of nose and mouth and joins such vibration with those made in the throat. A whole system of voice culture or a "method," as it is sometimes called, might be made on the recognition of this truth. After the chambers vibrate in conjunction with the larynx vibration the whole tone may be made more ample. A student cannot make the action which brings this about. He can permit it. Thought of amplitude probably causes all the muscles to act more completely and the chambers to increase in size. If they do synchronously—that is, all parts preserving their proper relation and proportion to each other during the act of amplifying—there is very great increase of voice, and beautiful voice to. If parts do not balance—increase synchronously—there results harshness and forced tone. Any attempt to secure secondary resonance by means of applied power will end in forced voice.

It is probable that seeking to get good quality will help one to get "secondary resonance." But quality does not make more of it. That is not the office of quality. It colors tone and gives its characteristics. It may be brought home to the mind of teachers and students once more that quality is always to be in mind while practicing, whether for one thing or another. Good quality is the basis of good singing. It alone, if there is any voice at all, will give satisfaction to refined people. When power palls quality still satisfies. Nearly all the renowned singers of the past are remembered for the beauty of their voices rather than for their power.

●

As the ladies voice, being an octave higher than the man's, requires twice as many vibrations to make a given note, must she sing twice as hard?

Because of the self-imposed perplexities which students have an answer will be given the above, although what difference it can make to the student is not apparent. When first studying notes, which had to be done without a teacher, how many perplexing things were there! For instance, I found that a quarter note had a stem turned upward and another quarter note had a stem turned downward. What did it mean? It took me quite a while to discover that notes above the middle of the staff had the stems turned down, and those below the middle turned upward. Such are self-imposed tasks.

The reason why ladies voices are an octave higher than men's is because of the smaller and finer larynxes and throats. To make any note—as middle A—needs no more or less work for a lady to sing it than should a man use to sing the A an octave lower. Nature has regulated the matter for each. One word more: If a man sings his high A, that being exactly the same note in pitch of the middle A in the lady's voice, he does have much more work going on in his throat than has the lady. The big larynx has been made to do the same work the small larynx does. That means more work. But the successful singer gets so he can do even that and display (or feel) no effort in doing it.

LAMPERTI.

EDITH ABELL.

It was at the very height of Lamperti's popularity that I was accepted by him as a pupil. I had already sung two seasons in opera, had done church and oratorio work and, despite the gentle and kindly encouragement of my American audiences, deeming my faults far more conspicuous than my merits, I went to Italy, hoping to find in the musical atmosphere and surroundings of that country and the teaching of the great masters of Milan the means of developing my voice, conquering my faults and gaining as full a knowledge of that famous school of singing from out of which arose the wonderful artists which have delighted the world for generations. Singers, whose golden notes have charmed away the melancholy of kings, who have been the joy of princes and nobles and the idols of an adoring public.

***

I had been directed, on leaving my own country, to Signor Sangiovanni, a tenor who came over to the United States with Jenny Lind on her first concert tour, and who had also been a great favorite in European cities. Unquestionably he was an impeccable musician and master, but while yielding him homage and admiration, I yet found him too easily satisfied with my voice and efforts. I knew my faults, he judged them too leniently and we did little but "pass" operas, while he continually urged me to accept engagements when my Italian pronunciation was far from being anything but embryonic and I was well aware that the Italian public demanded purity, clearness and accuracy in that respect. Sangiovanni was a very handsome man, with a fine presence and a large, expansive manner; in fact, so ornamental that when he came to my little room to give me lessons I looked upon him as a quite attractive and picturesque addition to my daily life. He would enter with a "Con permesso, signorina" ("with your permission"), admire his fine figure in my long glass, then seat himself at my piano and play my accompaniments in his masterly manner, cry out a few "Brava's," and after hearing me sing through my part in some opera, reversing the order of his coming, would take himself away pouring out a volley of the conventional Italian compliments.

"Now this," I said to myself, "is all very fine and delightful, but it isn't good study. I am learning a number of operas and an enormous amount of new 'cadenze,' but I must have a master who sees my faults, who is more severe with me. This dead level praise is very benumbing." So with many expressions of regret I parted with Sangiovanni.

***

Some one told me of Corsi, another famous singer for whom Verdi wrote the part of Rigoletto in the opera of that name, and who subsequently became the head of the St. Petersburg conservatory. To Signor Corsi I then directed my steps. Signor Sangiovanni had spoken English perfectly, but not a word of my mother tongue could Corsi utter or understand, so I took along with me to my lessons a fellow American who could speak Italian, as I had not fully mastered that tongue at the moment.

Corsi was fine, but he had two faults; he, too, was easily satisfied with me, and he could go to sleep at any and every moment. To have your teacher sound asleep when you were pouring out your voice with fervor, while your soul was standing on the pinnacle of musical ecstacy, was not to be thought of, not to be endured for one moment, let alone for a long hour's lesson, and so Corsi and I, with many compliments, reluctantly parted. My fellow pupil said: "You want some one to criticise you more severely? Well, go to Lamperti, he'll do it; and he won't go to sleep." So, after a few weeks spent in mastering Italian that I might understand him fully, I went to Lamperti—and found he spoke the Milanese dialect. It had not occurred to me to learn the dialect. However, I hoped that the universal language of music would aid me.

***

I went to the shabby studio of the famous man, over a little café or wine shop, which filled the house with the fumes of various brands of wine and beer. Added to this was the cigar smoke which came from the room adjoining the studio, used by one of Lamperti's sons as a musical agency, and which was always crowded with men, every one of whom was invariably smoking. You may imagine the atmosphere. The studio itself was astonishingly bare. The least pretentious music teachers in my own country would have scorned it in this day of studios overloaded with bric-a-brac and useless and trivial adornments. This one was furnished with a small grand piano of very poor, thin tone, whose case looked as if it had barely survived a shipwreck. There were moments when Lamperti, failing to make a pupil comprehend time and accent, would beat them out with his baton on the lid. Add to this the fact that nearly every pupil ordered some kind of mild refreshment from the wine shop below, and that all the glasses, in the absence of any table, were put on the piano, and one may easily see that the poor instrument could not keep up much of a pretention to original beauty and polish. On an old sofa sat Lamperti, baton in hand. He was a tall, bent old man, light complexioned, with faded sandy hair and whiskers, and pale blue eyes, and a large mouth, with projecting teeth. He had absolutely no pretentions to any appearance of dignity or authority. His speaking voice was indistinct and misty, his singing voice a horror—but he seldom gave an example of it.

***

All the pupils who could crowd down beside him sat on the old sofa. The rest of us were ranged around the room on little chairs of a very humble pattern. The master liked to have those pupils whose day it

was to take a lesson spend the morning or the afternoon doing so, calling us up in turn to sing about fifteen minutes at a time. This at first was disconcerting, but one quickly got used to it and found that as much was to be learned by hearing the others, if not more, than by having a lesson quite alone with the master. On the whole, I now think that it is the best way to study, although most students would object to it. In this manner I heard the lessons of many who have since become famous. One by one the master called us to him. The accompanist sat at the piano mechanically playing the necessary chords and talking volubly with some pupil beside her, while we stood before the old man, who sat in a huddled heap on the sofa, baton in hand, with which he sawed us up and down on the shoulders. Why he did this I never knew, unless it was to keep in our minds the legato style he so earnestly cultivated in us all. His great cry was "Breathe! always breathe;" and yet one of his greatest pupils at the time, Signora Waldmann, for whom Verdi wrote the part of Amneris in the "Aida," and the contralto part in "The Requiem," was particularly faulty in this respect, which distressed Lamperti greatly, as he confessed to me. When we sang an aria about which the master was very particular, he himself played for us and then we fairly outdid ourselves. He was very painstaking and exigeant. I remember one poor girl who sang nothing but the mad scene from "Lucia" for three eternal months. And to this day I can remember the various "cadenze" in a score of operas which I learned by just hearing pupils sing the same ones week after week until in his judgment they approached what he called "finish."

***

All of the pupils were making a serious study of music. None came simply to learn drawing-room songs. All the work was big. Many were learning new operas between engagements. I remember well Signora Waldmann, of whom I spoke above. When she first appeared with her sister at the studio a poor, plain, awkward, shabbily-dressed girl, who possessed a glorious contralto voice, no one dreamed that within a few months on the stage at La Scala all Milan would shout "bravas" and wildly recall her again and again, or that she would be chosen by the great Verdi to create two of his noblest roles. Still less when she retired from the stage that that usually dishevelled head would wear the coronet of a duchess. That the silver-voiced and gentle Albani would eventually be the friend and favorite of the great Queen Victoria, she who sat with us on those humble and rickety chairs and took her lessons just as we did.

One episode which I will relate has lingered all these years in my memory. It was on a hot summer afternoon, when all the voices sounded unusually dull and uninteresting to me, the chatter of the pupils unbearable, and I was longing to get through my lessons and back to my cool, shady, pretty room. As usual, the piano was covered with an array of glasses, and now and then a man would come in from the agency in the next room, seize a glass, drink the contents and retire, letting in a confusion of voices and much smoke as he came and went. This man whom I took to be the waiter from the café below, dressed simply and untidily in a rumpled shirt and trousers, and a yet more rumpled linen coat, "got on my nerves" with his fluttering to and fro, his coat-tails flying in the air, and I wished that he would finally clear the piano of its glasses and betake himself to the shop.

***

At last, Lamperti called me up to sing, and when I finished he said: "Would you please put your head into the next room and call Campanini?"

I parted the curtains and shouted the name into the confusion and noise of the agency, and then seated myself to await my turn to conclude my lesson. The waiter entered. "Ah!" I said to myself, "this time he surely will clear off the glasses from that piano and carry them away. I hope he won't return." Judge of my surprise when I saw, instead, Lamperti, disentangling himself from the effusive pupils hanging around him, slowly arise and seating himself at the piano, began the prelude to the tenor aria from "Don Sebastian." The "waiter" went over to the master's side and sang that song with the divinest tenor voice I had ever heard. Strong, brilliant, sympathetic, with that lovely Italian legato which is the distinguishing characteristic of that school.

Campanini was then at the zenith of his brilliant powers. The following season he made the greatest success any tenor had made, many said, since the days of the far-famed Rubini. And he poured out that glorious voice in that mean little room while our hearts shook with the beauty and splendor of it all. That poor, shabby, common-looking little man with the voice of an angel!

When he had finished and gone back to the agency the master called me again, but I could only shake my head, my throat was choked with unshed tears. Lamperti understood and gently dismissed me. I went out into the little street, passing under the shadow of the great cathedral to my quiet room, overwhelmed by what I had heard. Long, long that voice lingered in my memory, and not his least ardent admirer who welcomed him on the night of his first triumph at La Scala was his fellow-student at the great Lamperti's.

WILL YOU SUCCEED?

FRANK H. TUBBS.

Every autumn several thousand music students descend upon the cities of the East. They come from the West and South chiefly. All come with the intention to make their lives better and greater, and to prepare themselves for such positions as will give them independence in life. Each have high hopes. They are the best and brightest young people from their communities and every one of them has already had a measure of success. Many hope to enter professional careers in the large cities. Others propose to return to their homes greater for their stay in the cities. Questions: Can all succeed? What will the harvest be? What will help them most?

When I say that all can succeed, I do not mean that all will succeed. In fact, the majority of them will not succeed. Why? You see all the questions can be answered simultaneously. The majority will fall far short of their expectation, because, although they thought themselves ready for the trip to the large city, they were not. Probably they could not be made so at their own homes. Conditions in the large cities are so different from what they are at home, that when the get to the city a new life must be begun. Students don't realize that. They begin study and expect lessons in their specialty will make them great. When they have studied as long as funds will permit, they go home, much improved but far short of what they might have been. They are not satisfied, and don't know what has been wrong. The trouble lies in this: they do not realize that all true growth in life comes from development of the character, the mind, the soul of the individual. They enter a home or a boarding-house and stay there, guarded and secluded. That is the worst thing they could do. It may seem rough to turn a young girl fresh from a choice home loose in a city like New York and tell her to make herself over quick as she can. To most mothers that would seem like telling the lovely daughter to become a bold, forward and immodest creature. That is because the mother doesn't know New York, except by reading about it. In the city are the most active minds; the men and women highest in culture; those quick to think and strong to act. A student, as soon as he or she reaches the large city should begin the transformation of self into the kind she finds there who are holding the best positions. It means making acquaintance with good people and being among them; of studying styles; of feeling city activity; of attending the great churches; of hearing the great actors and singers; of visiting art galleries; of studying all sorts of problems, social, scientific, and even financial. There is no time to sit still. There is the mistake which the majority make. Although all improve, comparatively few change to city folks. Yet, every one of these bright students could become all she anticipated.

It is an interesting, yet sad fact, that nearly all young ladies after a season in New York and a return to their homes, marry very soon. Interesting, because it demonstrates that the city sojourn has so improved them that they are conspicuously great and therefore quickly selected by home swains. Sad, because marriage with most ends musical ambition and is confession of failure. I believe in marriage and want to see every young lady grace a happy home, but I want her first to develope the ego—real self—to the point which prevents retrograde. Her study, association and grasp of true life should go so far that the impetus will carry her onward and upward as long as she lives. To place the soul-growth in the large city is the real object of the visit and that will give pure success.

SOME PERSONAL HISTORY.

EDOUARD DE RESZKE.

It is generally known, I believe, that I came from a family in which the interest for music and singing was paramount. But it is less known that, just because of this, I was destined to follow a path quite at a tangent from that already trod by my sister Josephine and my brother Jean. I was to make myself fit in every way for pursuits of land-farming and agriculture. I was following a course of studies at Proschau, in Silesia, with average chances of success, when a school holiday brought me to Paris, where my sister had been just engaged at the Opera House. I stayed to escort her and my mother to various social functions, and, as I could sing a few songs, now and again I was pushed towards the pianoforte and asked to "oblige."

My performances, originally, were a mere device on Josephine's part to avoid being importuned herself; but, little by little, I got a reputation as an amateur, and I began to be talked about amongst our set. Verdi's publisher, M. Escudier, had heard of me in this way, joined a party once or twice to listen to my singing, and one day proposed that I should sing to Verdi, who was just then in Paris conducting the rehearsals of "Aida." It was in 1875, in March, and the production of the work, though imminent, was delayed by some difficulties with the cast. I went to Verdi's with M. Escudier, sang something, and then the master opened the score of "Aida," and asked me to try over the part of the King. I did, and the moment I finished, Verdi turned round, and saying, "You will do; go and get yourself measured for a costume," bundled us both out of the room.

I was so angry, and so bewildered at what I thought a questionable joke, that it was only when we got home that I understood Escudier's explanation: the production of "Aida" was hanging fire because Verdi could not find a singer whose voice he liked for the part of the King; my voice pleased him, and I must needs give up Proschau, and all the rest, to obey his command! More than that: I was counted upon at rehearsal the next day, and, with one other rehearsal, I was expected to make a *début* in a production which everybody considered the most important for a quarter of a century. However, *la jeunesse ne doute de rein*, and I, without hesitation, agreed to everything.

To this day, I do not know how I got through the evening of the *première*, especially with those terrible eyes of Verdi, who was conducting, upon me. I remember only that my make-up was ghastly, though Greilhard helped me with it, and I recollect also that Verdi was pleased, and the public and the press very kind. But the agonies of that evening were so vivid that I refused every engagement offered, and never thought of singing on the stage again. Fates decreed otherwise, for some months later, when walking about Milan with Jean, we met Massenet and his publishers, Ricordi and Hartmann, and I was persuaded to come to the rescue very much on the same lines as was the case in "Aida." Only here it was not *a* bass part that was thrust on me, but *two*. And so it happened that my second appearance was at the Scala in the production of "Le Roi de Lahore."

Those were record beginnings for a youngster: La Scala and Paris. The Reale in Madrid, Lisbon, and Covent Garden followed soon. Verdi asked for me again when "Simon Boccanegra" and "Ernani" were revived. Then came the engagement for the Paris Opera, and at its close that for the United States. There is little more of interest I can tell you. My repertory is rather extensive, as I sing eighty-five operas, some of them in three languages: "Lohengrin," for instance. I have created seventeen parts during my career, in "Aida," "Herodiade," "Le Cid," "Patrie," "Aben Hamet," "Demonio," "Velléda," "Elaine," "Sigued," the "Lady of Longford," "Gioconda," the "Re di Lahore," "Maria Tudor," "Don Giovanni d'Austria," "Simon Boccanegra," the "Figliuol Prodigo," and "Elda." I was chosen by Gounod for Mephisto at the 500th performance of "Faust" at the Paris Opera, and also for the jubilee performance there of "Don Giovanni," when I sang Leporello, and Jean, Don Ottavio.

I have no predilections of any kind in my art: I love music and the art of singing, and there is no greater pleasure to me than listening to or taking part in a fine performance of a beautiful work.

The true artist aims to give utterance to the pure impulses of art within him; to do good with these impulses; to make others happy and do good to humanity.

ENCORE.

The singer stood in a blaze of light,
And fronted the waiting throng;
Her lips apart with her greeting smile,
Her soul soared out in her song.
Now hovering like an imprisoned bird
With its plainings thrilling high,
Then faintly sweet, as the reapers hear
A la k afar in the sky.

And forth like thunder the praises broke,
And the singer bowed and smiled,
And flowers fell fast in a scented storm—
But she was not to be wiled.
"Shall I throw my gifts to this fickle throng?"
She thought with a bitter sigh.
"What do they care for my simple song?"
And she courtesied a glad good-by.

The singer sat in her lonely room,
And the stars peeped out of the haze,
And her voice poured forth in its sweetest gush,
Though none was near to praise—
Till she saw a form to her window creep
And crouch by its misty pane,—
An old dame wept at the wondrous song
That gave back her youth again!

The singer stirred not, nor made a sign
That she saw where the listener stood,
But once and again she raised her voice
And poured out its golden flood,
And only ceased when the minster bells
Shook out their evening clang—
Then one thanked God for the song she heard,
And one for the song she sang.

BREATH PRESSURE AND THROAT ACTION.

HENRY W. GILES.

Perhaps the most marvellous thing about the work of the larynx in the singing voice is the perfect adjustment of the action of the intrinsic muscles to every delicate or more pronounced change in the breath pressure. It is a well-known fact that in the case of wind instruments, an increase in the pressure of air tends to raise the pitch, and *vice versa* a diminution of the pressure tends to lower the same. This is particularly true of the string tone stops in the organ, where a slight over pressure of wind gives the harmonic of the original tone of the pipe. Much more sensitive, however, are the vocal bands to slight and delicate changes of pressure. To test this in your own voice, try the following experiment. First, eliminate from the mind any idea of pitch. This is difficult at first, but may be accomplished with practice. Attack a tone gently on the vowel ah (naturally it will be in the medium part of the voice.) While holding the tone, with the throat very loose, and still without any thought of pitch, gradually increase the breath pressure, and notice the rise in pitch as in a groan, or something like that which takes place in executing a portamento to a higher tone. Then, as you relax the breath pressure, notice the return to the original pitch, or perhaps lower. Do not look for beauty of tone, as it probably will be very weak and without character. Mueller says that the increase of breath pressure can raise the pitch a full fifth; Harless succeeded in raising it one octave. Nevertheless, so rapid and strong is the response of the little muscles of the vocal bands to the mental idea of pitch, that when not interfered with, they immediately adjust themselves to the breath pressure, thus preserving the intonation intact, and under control of the will. Now supposing that these adjusting muscles are not left free to do their work as they desire, what happens? In that case we have a veritable *butte vocale*, or vocal contest. Here is first the mental idea of pitch exerting its influence; next the active wrong throat effort of the singer opposing, together with generally a wild and uncontrolled pressure of breath, with resulting throaty quality, faulty intonation, and the general disgust of the singer and those who listen.

What is the remedy? Simply loosen up these interfering muscles, and allow the right ones to grow strong, gradually and surely. That is the reason we hear so much from the voice teacher about relaxed throat, tongue, jaw, etc. But, you say, "if I do this my tone will be so weak I cannot be heard." In reply, I will ask, do you appreciate how the tone will develop under careful practice for months and years? Do you not look for growth in your voice, as results of study? You cannot expect this if you start now where you ought to be after years of preparation. I have known voices to be built up from almost nothing—mere breath—if the throat action was correct. And yet we hear voice-teachers glorifying themselves because they send away all but those with the very best voices, as though they were committing a particularly meritorious act by so doing. The truth probably is that they do not care to burden their ears with the noises from an ill-fledged pupil.

And now having seen that we may sustain and alter the pitch of the tone by breath pressure or by throat action, the question obtrudes itself: How and when shall we intensify or diminish the action of the one or the other, in singing? It is neither possible nor necessary to answer this question in detail. To do so would be to write an extended treatise on the art of cultivating the voice. Undoubtedly the best singers have given it no thought whatever in the shape as above presented, but at the same time have obeyed the laws governing it intuitively and almost unconsciously. As a general principle it may be stated that the voice in its crude state requires a greater breath pressure; that as the artistic tone develops, the intrinsic muscles grow stronger and less and less breath pressure is required. This would seem to indicate that tone practice should be begun with little breath in order that the muscles that produce the artistic tone may act fully and completely, thereby insuring commensurate growth and development.

AN IRREPRESSIBLE SONG.

ALFRED C. EDWARDS.

It was on June 29, 1819, that one of the most popular songs of the last century was originated. Its author, Thomas Dunn English, was visiting in New York City, and Nathaniel P. Willis who, with George P. Morris, was editing the New York *Mirror*, asked him for a gratuitous contribution, and suggested that it be a sea song. Dr. English promised one, and on returning to his home in New Jersey—where he still resides—attempted to make good his promise. Only one line that savored of the sea came at his bidding, but at a white heat he composed the five stanzas of "Ben Bolt," as it now reads, betraying the original intention in the last line of the last stanza.

Within a year the poem had been reprinted in England, and its author thought it might be a still greater favorite if set to appropriate music. Dominick M. H. Hay composed an air for it, which was never printed, and Dr. English wrote one himself, which, although printed, reached no sale.

It was arranged entirely for the black keys. In 1848 a play was produced in Pittsburg, Pa., in which the song of "Ben Bolt" was introduced. A. M. Hunt, an Englishman connected with Western journalism, had read the words in an English newspaper, and gave them from memory to Nelson Kneass, filling in from his imagination where his memory failed. Kneass adapted a German melody to the lines, and they were sung in the play. The drama died, but the song survived.

A music publisher in Cincinnati obtained the copyright, and it was the business success of his career. In theatres, concert rooms, minstrel shows and private parlors nothing was heard but "Ben Bolt," and "Sweet Alice" became the pet of the public. A steamboat in the West and a ship in the East were named after her. The steamer was blown up and the ship was wrecked, but Alice floated safely in the fragile bark of song.

The song went abroad and obtained great popularity in England. The streets of London were flooded with parodies, answers and imitations, printed in broadsides, and sung and sold by curbstone minstrels. A play was written there based upon it and as late as 1877 a serial novel ran through a weekly paper of note, in which the memories evoked by the singing of "Ben Bolt" played a prominent part in evolving the catastrophe. Of course, everyone knows of its more recent revival in DuMaurier's famous novel.

Within the past year the song has achieved great prominence and music dealers all over the world note the fact that immense sales have been made of the irrepressible American composition.

Hon. Thomas Dunn English, who represented New Jersey as Democratic Congressman for several terms, is a well-known and greatly respected citizen of Jersey City, N. J. As the originator of "Ben Bolt," he will always be pleasantly and cordially remembered by Americans.

The writer set in type the first printed announcement of "Ben Bolt," while employed in a Massachusetts country newspaper office in the Fall of 1856.

The ideal realm which some of us enter, and which is so sweet and filled with reposeful harmony, will in due time become more and more real—it will become the objective materialized kingdom of our existence.

WHAT IS YOUR SONG?

F. S. P.

Standing by the window the other morning, my husband called me to look at a beautiful bird perched upon a branch near by, saying: "Listen, let us see what his song shall be." Why can this not be so with us? Let us listen and see what each other's song will be. God has gifted us all with inward, if not outward, beauties; now let us sing in our own way, but each have a song, and the world, as well as the birds, will listen for each other's singing and happier be.

THE SONG OF LOVE.

Through the harsh voices of our day
A low sweet prelude finds its way;
Through clouds of doubt and creeds of fear
A light is breaking, calm and clear;
That song of love, now low and far,
Krelong shall swell from star to star:
That light, the breaking day, which tips
The golden-spired apocalypse!

—*John G. Whittier.*

SUGGESTIONS.

POL PLANCON.

In singing, think as much of the words as of the music. But the great majority are more occupied with the music than with the words. Their desire is to emit the note instead of the word.

In studying a song I always begin with the words, getting the sense of them thoroughly fixed in my mind. The picture must be painted in the imagination before you can paint it in tone. Then I sing the music over, and later both music and words, thoughtfully working at each separate phrase until it is finished in a way that I feel I cannot improve upon it.

In French there are so many nasal sounds, *on*, *an*, *en*, and the like, that if the emission and enunciation are faulty, readily become exaggerations. And how prone young singers of every nationality are to this nasal exaggeration in singing the French language. It is something that needs pre-eminently to be guarded against, not only for the sake of the tone, but of the language. Exaggeration in any direction is one of the gravest offences against art. One of the things a singer should do is to soften these nasal sounds and not to make them more pronounced than necessary. There are singers who, in order not to be too nasal, omit these sounds altogether. As the nasal sounds are part of the French language, I think it wrong to omit them, and, as I said, I pronounce them softened.

The selection of songs by the singer depends upon the matter of education and the development of the mind. A singer without true refinement and distinction can never properly interpret a song demanding both. And, believe me, the character of every singer is shown distinctly in his song. The most beautiful songs will become common in interpretation if that be the level of the singer. A beautiful voice and beautiful enunciation is not all that is necessary. Many there are who may possess these qualities in eminent degree, but who are surpassed by others having these same qualities less fully developed, and who sing, nevertheless, far more satisfactorily. As I said, the song takes on the character of the singer.

First of all, in interpretation the sentiment and power of expression must be regarded. Up to a certain point the individuality of the singer must be considered in the selection of the song. But we must also select songs that do not accord with our own temperament, otherwise we shall be in danger of getting into a groove. It is very necessary to sing songs of every style. For this reason I often, in singing in a concert, choose songs which I know I do less well than others in order to give the public variety. For instance, in a recital which I shall shortly give in Boston, I shall sing two or three songs which are not wholly in my style, and which, I fear, I shall not do so well as I do other things; but I shall take them to broaden my sphere.

Among the modern French composers' work you will find many beautiful songs. Saint-Saëns, Massenet, Benjamin Godard, Augusta Holmés, Délibes, Gabriel Faure, Paul Vidal, Bemberg, Gastin Paulin, all have written beautiful melodies.

The music of the younger French composers is less simple. It is very difficult, indeed; and the trouble is that it is often so complex that it produces no effect upon the public. But, as I said, I am an older singer, and, therefore, I like the older songs. In the very old French songs you will find lovely examples admirably fitted for use in recital programs in the works of Grétry and Rameau.

THE ORGAN.

ORGAN AND CHOIR.

WM. HORATIO CLARKE.

The Organ Case.

Excepting as a support to the bass pipes, the casing, or "Orgel Haus," is entirely independent of the organ as a musical instrument. Yet it has relation to the distribution of the tone to a greater degree than is generally considered, particularly as an obstruction to the free radiation of sound. Up to the impost or belt, in which the front display pipes stand, the case work is protective to the works within, and confines whatever noise may be produced by the operation of the action-work which, by modern improvements, has been diminished so that it is not apparent. But, as ordinarily arranged, the front pipes are so located as to prevent the free egress of the sound from the manual pipes.

The front pipes are commonly placed near together, with not over an inch of space between them, with no other openings save the diagonal interstices between the feet. The effect in the distribution of the tone is the same as if flat boards were fastened along the front, the cylindrical shape of the metal pipes making no difference, and often a number of pedal wood pipes are used for display, which offer an additional barrier.

The case of an organ offers a fine field for architectural design to which the musical capacity is sometimes made subservient, whereas the reverse order should prevail, and the design made subservient to the musical value. Directly in front of the Great Section there should be an ornamented open screen work, with frame and carving in harmony with the church architecture, and displayed pipes should rather be placed at the corners and sides. This would afford an artistic opportunity, which would be pleasing to the eye, and add to the sonority and effectiveness of the instrument.

The belt of the organ should never be higher than the Great Chest, as the power of the tones as they come to the organist would otherwise be greatly diminished.

When an organ is placed in a recessed chamber, as is often instanced in chancel organs, it would be much better to have an open screen work above the belt rather than any displayed pipes. This would somewhat obviate the stifled effect of the sound which is usual when organs are thus enclosed. It is not a good plan to have a low arch, with the interior space higher than the arch, for the tone is then held back, the vibrations not being well communicated to the air in the auditorium. The effect is analogous to smoke being generated in such a recess, which would ascend to the top and remain until its accumulation would be crowded down and find its way outside the arch.

I recall an illustration of this stifled effect where I was engaged to exhibit a chancel organ of good size, where the opening was low and narrow, filled with front pipes. In rehearsing the program the resonance of the empty church aided much in giving sonority, but in the evening, when every pew was filled, the effect was very disappointing. The organ had no more power than an ordinary reed organ, and even the tone of the pedal pipes did not pervade the room, and only resounded within the enclosed recess. When the church was empty there was a sympathetic vibration communicated to the air, which was reflected from every point, but when filled with an audience the heated air and absorbing clothing destroyed the resonance of the room and the organ tones found limited egress. Therefore much of the money invested in this organ was lost on account of its location.

Organs are sometimes built with no casing above the belt, the pipes standing in their natural position on the chests. While the musical effect is the very best, on account of the absence of any obstruction, there is an impression that the organ is unfinished and the effect is more mechanical than ornate. An open screen work of artistic design would relieve this impression without detracting from the musical effect. The capacity of an organ is measured by the number of speaking registers and not by the size of the case or quantity of displayed pipes.

In nearly every instance where an organ has been placed in a recess with the arched opening filled with front pipes there has been a disappointment in the musical effect, compared with what the number and quality of the stops would indicate. Organs placed in the chancel or in the rear of the pulpit are often finished in this manner. Instruments located at the opposite end from the pulpit, with more open case work, have generally given a better musical effect in the auditorium than chancel organs, but when crowded back into the tower the result has not been good.

Up to about the year 1855 nearly every organ in this country was placed in a gallery opposite the minister. Where there were no side galleries, the organ was sometimes placed on a choir platform, three or four feet high, which gave ample space overhead for the dissemination of the tones. The effect of the organist —out of sight—was better than seeing a player manipulate the keys and stops, which latter often detracts from the impersonality of the music. For this reason it is a good plan to have the organist entirely screened from the view of the congregation and a number of organs have thus been built, the screen work appearing to be a part of the case below the belt.

In many of the large European organs the Choir Section is placed on the gallery front, with a separate case from the main instrument, the organist being located behind the choir section and hidden from view.

In former centuries the foreign organ cases were very elaborate in design and decoration. The case of the old Haarlem organ is considered one of the most remarkable, 108 feet in height, standing in the church of St. Bavon. One of the most beautiful cases ever constructed is to be found in the Cathedral of Hertogenbosch, in Holland, the name of the town on maps being Bois-le-Duc.

There is a noted museum, in Amsterdam, which has one section devoted to ancient organ fronts, which were preserved when the old churches were demolished, an inspection of which would richly repay a musical tourist interested in elaborate organ designs.

Readers of THE MUSICIAN, who are making a folio of the designs of organ fronts for their musical libraries, will be pleased to learn that engraved illustrations of the following English and Continental organs may be ordered through the Hatch Music Co. at an average price of about ten cents each, viz.:

Trocadero, Paris; Town Hall, Sidney, N. S. W.; St. Sulpice, Paris; Benedictine Monastery, Weingarten, Germany; Cathedral, Rheims; St. Stephen's, Vienna; Minster, Basal, Switzerland; Town Hall, Pietermaritzburg, Natal; Cathedral, Amiens; Church of St. Bavon, Haarlem; Cathedral, Cologne; Cathedral, St. Omer; The Hagg, Mirfield; Alexandria Palace, London; Parish Church, Bishop's Stortford; King's College, Cambridge; Royal Manchester College of Music; Falshaw Hall, Wilmslow, Cheshire; St. Saviour's, Southwark; Allhallow's, East India Dock-road; Queen's College, Cambridge; Cathedral, Worcester; St. David's, Pembrokeshire; St. Luke's, Chelsea; Presbyterian Church, Marylebone; St. Mary's, Bradford; St. Mary's, Islington; St. Peter's, Eaton Square, London; St. Mary's-at-Hill, Eastcheap; St. George's Chapel, Windsor; St. Paul's, Covent Garden; St. Leonard, Shoreditch; St. Katherine's, Regent's Park; Town Hall, Hanley, Staffordshire; Wesleyan Chapel, Southport; Parish Church, Barton Under-Needwood; Whitchurch, Edgware; St. James, Piccadilly; Great Assembly Hall, Mile End road; Queen's Hall, Langham Place; Parish Church, West Derby; St. John's, Birkenhead; Parish Church, Fulham; Parish Church, Bury, Lancashire; Parish Church, Halifax; Parish Church, Newport, Isle of Wight; Cathedral, Bangor; Pavillion, Rhyl, North Wales; Parish Church, Beddington, Surrey; St. James', Garlickhithe, E. C.; Kelton Hall, Stamford; Parish Church, Rawtenstall, Manchester; All Hallows, Barking; Parish Church, Doncaster; Cathedral, Manchester; St. Margaret Pattons, Road Lane, E. C.; Foundling Hospital, London; St. George's, Botolph Lane, E. C.; St. Mary's, Moorfield, E. C.; Town Hall, Birmingham; St. Olave, Southwark, E. C.; St. Peter's, Cornhill, E. C.; Old Choir Organ in Cathedral, Manchester; St. Magnus the Martyr, London Bridge; St. Andrew, Undershaft, E. C.; Parish Church, Blackburn; Cathedral, Peterborough; Town Hall, Bolton; Cathedral, Lincoln; St. Peter's Italian Church, Hatton Garden; New Public Hall, Preston; St. Paul's Institute, Burton-on-Trent; Free Trade Hall, Manchester; St. Peter's, Manchester; St. Martin's, Brigton; Holy Rood Church, Southampton.

These illustrations are accompanied with historic account, specifications, etc., which give them a special value to lovers of the organ. Each design is 10 x 7 inches and, doubtless, the whole set could be forwarded by mail for $6.50.

Where organs are placed in the corner, at either the right or left of the pulpit, it is usual to mount the belt of the two exposed sides with an array of displayed fronts, a number of which do not speak, but which are introduced to fill out the space of a symmetrical design. It is customary to use seventeen of the 8 ft. Open Diapason lower pipes in front, in small organs, with five from the 4 ft. Octave. The front lengths have no regard for the pitch, as the backs are cut out for tuning. Where a front pipe is very long several openings are cut out above the tuning point, so that the quality of tone shall not be changed by the greater length. Front pipes are also used from the Pedal and Choir Sections, and when the Great Section contains 16 ft. open metal stops there is a larger field to utilize in the use of mounted basses.

For the last half century or more, front pipes in ordinary organs have been made of annealed zinc, and are either gilded, bronzed, nickel-leafed or decorated in colors. Some organs are finished with the plain zinc. More costly organs have fronts of pure tin which are polished to resemble silver. This polished block-tin work gives a rich and dignified appearance to the case of an organ and adds much to the expense. Yet I have seen such costly pipes, when a church has been re-decorated with fresco work, painted over with colors to please the perverted taste of the annual church committee.

The musical value of pure tin front pipes is no better than when heavy zinc is used. When 32 ft. front pipes are used the weight is such that an inner foot of iron, overlaid with tin, is used to support the body which otherwise would crush the foot.

Previous to the introduction of zinc basses for fronts, the old organs used a large percentage of lead in the fronts, so much so that in the course of years the larger pipes were crushed at the toes and sank down from the top. Where these old organs have been preserved they have been refurnished with zinc fronts or repaired with new zinc feet.

Many of the cases of the continental organs had hinged panel-doors covering the entire front which were closed when the organ was not being used. These panels were highly decorated, and when the instrument was played these doors were swung outward and formed wings to the case.

●

Prima Vista Playing.

The playing of difficult organ music at sight is not to be expected of any player, even of the highest attainments, and this statement may prevent young students from becoming discouraged. Organ music, with its manual and pedal parts on three staves, its registration and expression, cannot be satisfactorily rendered the first time of its performance. The notes may be executed correctly, but it is impossible to absorb the entire structure and the thought of the composer in a cursory rendering, without a careful study of the piece. This is necessary for an intelligent communication of the idea incorporated in the structure of the composition.

There have been prodigies who have seemingly been exceptions, but there is more of sensationalism pertaining to such exceptions than solid satisfaction. Classical organ compositions are products of educated musical ideas which are put together in symmetrical design, which design must be clearly perceived in order that there may be a true interpretation on the part of the organist.

A celebrated English concert organist, yet active in his profession, told me, twenty years ago, that he had not practiced an hour for twenty years, and yet he is constantly giving concerts, with new programs and transcriptions, which certainly need looking over in their adaptation to different organs. Perhaps he

meant that he had not been obliged to devote himself to arduous study on account of a more proficient technique than usual, he being kept in constant practice in his concert giving.

No concert organist would attempt to give a program upon an organ with which he had not familiarized himself with its individual characteristics and faults by a private rehearsal.

Many young organists are disheartened because they cannot interpret difficult organ compositions at sight, but if they can play the church anthems and devotional voluntaries of the Sunday services at a first reading they are prepared for their practical work. Classical concert programs require hours of study by organists whose reputations have long been established, and it is not expected of any one that it can be interpreted at sight and no test examination for a church position demands it.

●

Organ Fugues in Devotional Services.

When a student on any subject becomes absorbed with an idea, on which his mind is concentrated, his enthusiasm often leads to an incipient fanaticism in the desire to arouse the same interest in other minds which have not been through the same order of thought in their experience.

For this reason a musical student must guard against becoming visionary in asserting the results of his studies, in places where they are not appropriate. An organ fugue is a learned species of composition which can only be fully appreciated by those who have studied the subject and know the method of its construction, with its leading theme (*comes*) and response (*dux*), or antecedent and consequent, with the varied counter-subjects, numerous episodes, pedal points and stretto.

These fugal elements cannot be traced out even by an expert, in simply listening to the performance, without the form of the composition being seen in the notes at the same time, or in previous study, because in carrying out the theme it often proceeds above or below another part, in addition to an inversion, diminution and augmentation. Besides, the sameness of the quality of tone as fugues are commonly played, obscures the individuality of the parts.

What person, not a player, has the least idea of the meaning of the terms alluded to? What musically-educated listener only, the first time of hearing an elaborate fugue, could possibly have the principal theme so impressed upon his mind that he could instantly detect an inversion, diminution or augmentation if introduced in any part while the antecedent is progressing?

Therefore its structure must be seen and what is seen is intellectual, because, as light is the symbol of wisdom or intelligence, so the eye, by means of which knowledge is absorbed, is also an emblem of the understanding, which holds the intelligence.

The emotional nature is kindled into warmth more through the sense of hearing than vision. Now, if the ear hears a grade of music beyond the capacity of the mind of the listener to understand, it is not appreciated and fails to touch the heart, or, in other words, to excite the emotional nature with love, compassion, comfort or hope.

An organ fugue in a religious service where the spirit of devotion is to permeate the thoughts, is out of place, and it is customary for the organist to interpret his fugal studies in the postlude, as the worshippers are leaving the sanctuary, while those who desire to listen quietly remain until the finale.

Occasionally one may find delicate canons, like the Canon in F, by Merkel, which, with its appropriate registration, includes an emotional element which is devotional, but such compositions are rare.

These thoughts are not intended to dampen the ardor of organ students in playing fugues, for there is no advanced musical study which will better aid in developing the technique of manual and pedal playing, while the intellectual structure of this higher and often pedantic form of music is being impressed on the mind. But in devotional services, to the majority of listeners, organ fugues have no higher meaning than would scale practice, in contrary motion, produce upon a person not musically inclined.

As a finale to a solemn service in a stately cathedral a noble fugue has a grand and inspiring effect upon a musical mind. The increase and diminishing of the power of the full organ as the theme is built up and added to the various parts, the entering and cessation of the ponderous pedal tones, to re-enter and blend in impressive harmonies, which resound from arch to arch of the vaulted roof, through nave and transept, gives to the fugue a majesty produced by no other species of musical composition, and which has its place amid such architectural environments with which it is in consonance.

●

Italian Organs.

E. C. T.—"I have arranged to spend several months in Italy and do not want to relinquish my organ practice during that time. Can you inform me if it will be possible for me to get access to any of the churches there and obtain the use of the organs?"

Answer.—You will not find much to encourage you in the way of organs or organ playing in Italy. With a few exceptions the organs are poor and the players poorer. A friend, writing me from Pisa, says that the organ in the Cathedral was execrable to listen to when he heard it, and that the playing was exasperating to a musical nature, which would not be tolerated in this country. Of course, there are modern organs in some parts of Italy, and there are such performers as Bossi, in Venice, and Renzi and Capocci in Rome.

Modern organ music cannot be played on the older instruments, as the pedals, as a general rule, do not even have an octave compass, ranging only from C to A, and in some instances they are placed perpendicularly on the side of the case, instead of horizontally, under the feet. The stops are composed of harsh reeds and mixtures, without sufficient fundamental registers to give dignity and balance, although the case work is excellent. You will best keep up your organ practice by taking a pedal piano with you, unless you take a vacation from organ study during your absence.

●

Discarded Stops.

C. N. F.—"I have been much interested in your articles upon organ matters and especially in your advocating the use of string-tone stops in the place of reeds in small organs. I have held my present position as organist for thirty-five years and thoroughly understand tuning and the setting of temperament, uniting piano tuning with my teaching. In the organ I have played so long the Hautboy is so uncertain in speech and uneven in quality that I never draw it. The Gt. Trumpet so overbalanced the Organ and Flute tone and was so snarly that I took it out years ago and packed it away, under the pulpit platform, never to make an appearance again. The Sesquialtera was so unmusical and discordant that I also then disconnected the slide so that it could not be inadvertently drawn. Could I have an Oboe Gamba placed in the Swell Box instead of the Hautboy? What stops would you suggest to replace the Gt. Trumpet and Sesquialtera?"

Answer.—You have had the experience of countless organists with these stops. You could have an Oboe Gamba replace the Hautboy, running down as far as the height of the Swell box will permit. If the old Hautboy started from Tenor C the height would be right for the string stop to begin at the same pitch. In place of the Gt. Trumpet and Sesquialtera I would recommend a Forte Gamba with a draught beard and an 8 ft. Quintadena, which will add much to the effectiveness of the organ and give you a pleasing variety. The length of your services as organist shows appreciation on the part of your society through so many years of changing members.

●

Nodal Points in Auditoriums.

B. G.—"Are there not certain locations for a listener where the organ will sound to better advantage than others? Is a seat under a gallery as favorable as in the centre of the room?"

Answer.—Every audience-room has certain points where an organ will have a better musical effect than in other locations, just the same as with a speaker's voice. But there is not one fixed point where the heavy pedal pipes will be heard with the same power and resonance. This may be illustrated by having any one of the lower pedal notes held while you walk in various sections of the room. You will discover a number of points where the vibration resounds with intense fulness, and upon moving a few feet away sometimes the pipe will hardly be heard. Each note has different nodal points in the room. When at the keyboard the organist does not hear all the lower pedal pipes with the same degree of power and is often apt to judge that certain pipes have defective speech when, on hearing these apparently poor pipes from a position out in the room, they will be found to be all right in voicing and power. These peculiarities are taken into consideration in the final regulation of the pipes. A position under a gallery is not favorable for musical resonance. Any obstacle which interferes with the direct diffusion of musical vibrations is detrimental to their clear reception by the ear. If an organist should put on a hat with a wide brim and note the effect he would find the power much diminished on account of the obstruction, just as when a person puts his hands in front of his ears he hears his own voice as if at a distance.

●

Swell Flute.

M. J. H.—"Which would be the best for a 4 ft. Flute in the Swell, a metal or wood harmonic stop? What is the advantage of a Clarinet or Oboe Flute over the flute stops commonly used?"

Answer.—I have always preferred a cylindrical metal Harmonic Flute to one of wood, because it is more distinct and penetrating. When such open wood stops as the Melodia and Clarabella are enclosed in a swell, the characteristic quality is somewhat absorbed, which a metal stop does not lose. Stops which are marked Clarinet or Oboe Flute have no relationship to the names thus indicated. The Clarinet and Oboe timbre is produced from reeds, which has no resemblance to the Flute tone, and the names are misnomers adopted by builders to represent something which does not exist. There would be less confusion concerning the names of organ stops if a fanciful nomenclature could be eliminated from specifications.

●

Non-Blending Stops.

A. G. H.—"There is a Twelfth in the organ I play which does not sound well in any combination. Can you tell me the reason and advise what stop to put in its place? There is also a Fifteenth which is very shrill and makes the tone of the full organ thin and squeaky. Can this be revoiced and softened?"

Answer.—Your Twelfth was voiced with the Organ Tone, common in old organs, and which does not blend in any combination. This could be revoiced by an expert and made to sound a delicate, pure flute tone, so that it could be used in many combinations without being obtrusive. The Fifteenth could also be softened at the same time. The work could be done in the church in a day, by an experienced voicer, at the price charged for such labor.

●

M. C.—"I play a small one manual organ which has a harsh sounding octave couple which, when used, although it adds to the power, makes the upper part so indistinct that no melody is heard. Can this stop be revoiced so as to remedy this defect?"

Answer.—You should learn the difference between mechanical and musical stops and the nature of each and their use. The best remedy for the defect you mention is not to use it.

●

The Old Boston Music Hall Organ.

W. A. F.—"In a criticism of the large German organ, which was completed in the old Boston Music Hall, in 1863, and which was removed, I once saw it stated, by a writer of some musical authority, that it was decidedly a weak-toned instrument on account of not having enough mixture stops, and that people were disappointed because it was not powerful. Was this true? Also, can you tell me when this organ was removed, and the reason of its removal, and what became of it?"

Answer.—The actual volume of tone from this organ was not equal to the expectation from the number of stops indicated, but the quality of the individual stops was excellent. The mixtures were more than ample and overbalanced the fundamental work. The organ lacked the proper amount of strong 8 ft. flue work and the scales of the pipes were not large. The Pedal Section had not the fulness of English and American instruments of a like specification, as the 16 ft. open wood pipes were of smaller scale. The 32 ft pedal reed stop was of free reed construction, the pipes having bodies a diatonic fifth shorter than the normal length and this stop was not powerful. When the manual reeds and mixtures were used in the full organ the tone was harsh and brassy on account of the absence of sufficient 8 ft. organ tone.

This organ was removed, about the year 1885, to give more stage room for the Boston Symphony Orchestra, and for a number of years was stored in a frame building in an old, disused cemetery, at the South End, in the rear of Dr. Tourjee's New England

Conservatory of Music, with the expectation that sometime it would be rebuilt for the use of the pupils in a hall which was then in contemplation. Its cost was $50,000, and it was sold, about six years ago, to Mr. E. F. Searles, of Methuen, for $1,500, who has since built a hall in that town for its reception, but as yet there has been no announcement of the completion of the instrument in its new home.

●

Service Prelude No. 7.

This Prelude is in a simple form appropriate to devotion with unanticipated modulations effected by means of the chord of the seventh in the fourth position in several instances. Beginning in the key of C, the theme modulates to the key of B, returning to C. After four measures between the alto, tenor and bass the treble enters, leading to the key of B flat, and again enters in D minor. Then through interrupted resolutions in D flat and E flat minor it returns to the original key, with a diminishing cadence in which care must be taken in shutting off the stops to make the changes so that they will be done on successive notes.

●

Congregational Singing.

Choir and congregational singing occupy distinct planes in religious services. The former belongs to the æsthetic degree of sacred music and implies study and culture, according to grade, while the latter is a natural expression of devotional feeling without assuming to be artistic.

Congregational singing contains the simple elements of religious aspiration devoid of external display and self-assertion. It does not require cultivation on the part of the singer, nor even a knowledge of the art of reading music. The chief requisite is the ability to sing the melody of the hymn as traditionally held in the memory. Male voices sing the melody an octave lower which, with a solid organ accompaniment, is no detriment. Singers who read notes generally sing the other parts when their voices are adapted. In the mass of sound the better voices predominate, so that harshness is somewhat covered. Even where one can only join in monotones it is not heard as discordant, and it is not essential to enunciate the words distinctly as in choir singing.

This singing is not satisfactory to an educated musical nature and does not savor of concert work. It is not to listen to but to engage in.

Its object is to impress on the mind the good thoughts contained in the hymns, which will be helpful in the nourishment of the religious nature. In engaging in this part of religious services, one does not listen to the effect, nor criticise others, nor seek to have his or her voice heard above others, but with the mind concentrated upon the idea conveyed by the hymn, the emotional nature is affected, if the conditions are in harmony with the sentiment.

Among the topics relating to helps in daily private devotion commended by a quaint writer two centuries ago, is an interesting chapter on the benefits arising from the audible utterance of the Psalms, as though set to music. He suggests that singing should flow forth naturally and extemporaneously (perhaps after the manner of a chant), even by those who think that they cannot sing. He argues that this exercise will greatly assist in kindling the religious affections with fresh zeal, and enjoins that it should be pursued as a privilege and a duty.

Crude as this idea seems at first thought, the old writer struck a foundation principle in congregational singing, which has relation to the effect upon the emotional nature.

Concerning harmonious conditions, it is a mistake to attempt to sing congregational hymns too rapidly as if each singer were in haste to get ahead of the others, and the organist should not attempt to rush his accompaniments a note ahead of the voices, as this hurried singing is destructive to meditative thought. The tempo should be sedate with a firm and massive swing, and if it is engaged in with harmonious spirit there will be no danger of its dragging wearily. In a succeeding number it is designed to indicate an average tempo as per metronome for many of the well-known congregational hymns and chorals.

It is not essential that the singing should be stentorian and vociferous, but rather engaged in with smoothness and a quiet heartiness. Two grades of power are sufficient, forte and piano, according to the sentiment of the verses. If the voices are brought down to pianissimo, the cohesive effect is likely to be lost. Choral singing is not intended to be filled with nuances and shades of esthetic expression, other than in the natural increase of power and diminuendo in ascending and descending melodies.

The organ accompaniment should be quite strong for the forte singing, with solid heavy pedal bass, and in the piano singing, the organ combinations should be of sufficient power to be heard above the voices, which otherwise would flat from the pitch and fall behind the tempo.

It requires experienced skill to accompany congregational singing well, and the organist must favor the method of singing in vogue and not adhere to the absolute rendering of the notes, especially at the end of the lines, for many of the singers possess only a memory of hymns as they have been sung. The organist must be in sympathy with this mode of singing, or he will thwart the idea and make it a source of irritation rather than a help. The matter of signal notes and interludes will receive attention in a future article on the subject which in this number is simply introductory.

●

Clarigold Services.

A quiet ethical movement has been inaugurated in Clarigold Hall, Reading, Mass., in which congregational singing is made a bond of religious union.

The services are held on Sunday afternoons, and consist of *Familiar Hymns and Helpful Thoughts* for all who desire to participate in an hour of sacred song. The hymns are sung with organ accompaniment, and are interspersed with short poems and paragraphs chosen from every good source, each verbal selection occupying only one or two minutes.

The hymns and excerpts are undenominational in their expression, independent of any system of ecclesiastical doctrine, and no private opinion is uttered. Everything sung or read is intended to afford comfort and hope in the trials and struggles of daily life, and to inculcate a simple trust in the infinite, according to each one's conception of God, united with the spirit of kindness toward all persons.

The hymns and extracts are carefully selected so as to be alike helpful to Hebrew and Christian, Catholic and Protestant, Trinitarian and Unitarian in the broadest spirit of charity, avoiding any doctrinal sentiments or assertions which would be offensive to any mode of religious thought, but rather which instill a reverence for those cardinal virtues which form the basis of true character, and upon which all good minds agree.

These services are not open for the presentation of sectarian views, the interchange of personal experiences, nor metaphysical eccentricities of any kind, and no collections are taken, there being no organized effort which incurs expenses, nor membership.

From fifteen to twenty hymns are sung, occupying about forty five minutes, and the helpful thoughts which are interwoven, fill out the allotted time. The object is to encourage good-will by means of the aspirations incarnated in the hymns, and to impress them upon the mind by active participation in singing them in a natural manner without display or sensationalism.

Clarigold Hall, or Chapel, was built to contain a large organ on the estate of a retired organist, in a pleasant rural neighborhood, on the line of electrics between Reading and Woburn. The name signifies that every influence thence emanating shall possess the quality which *clear gold* implies, for gold is an emblem of that love and good-will which elevates humanity. The word Clarigold is also found in English writings of the fifteenth century, as a name given to a species of harp which, in mediæval times, was the precursor of the spinet, harpsichord and pianoforte, and in this hall there is a large golden harp of conventional design surmounting the central organ pipes.

●

Tact in Choir Leadership.

Tact is adaptation to every environment and is the ability to educe the best there is in the varied capacities of a choir so as to accomplish the best results, and implies constant self control.

Choir leaders should always preserve a cheerful disposition during rehearsals, and never then manifest the slightest irritation, or at unavoidable mistakes during public services. A snarling director defeats his own work.

Singers should always be encouraged in their preparatory work at rehearsals. A nervous director does not accomplish as much as one who disciplines himself by not giving way to his excited emotions. A leader may be strict in his profession as chorister without exhibiting the irritation incident to the inevitable mistakes which occur in the regular drill work.

Some leaders are pleasant and companionable until they begin their drilling, when they are metamorphosed into hateful scolds. Such only retain their positions on account of their actual musical ability. Change can hardly be expected in an old chorister of this temperament, but young leaders may take warning and ward off such abnormal tendencies at the outset of their professional work.

●

Westminster Abbey Singers.

J. S.—"I have noticed short allusions to members of this choir being in this country, but have seen no accounts of their singing in any of our cities. Are they making a concert tour?"

Answer.—Nine members of the Westminster Abbey Choir were granted a leave of absence during their summer vacation and made a concert tour in Canada, from August 28 to September 13, as the Abbey Choir Glee and Concert Party. The only city visited in the United States was Buffalo, where they gave two concerts. They sang only secular music which included English glees, madrigals and part songs. Their artistic singing, blending of voices, excellent enunciation and finished work evoked the admiration of all listeners.

There were six men and three boys in addition to an eminent English contralto soloist. There were three boy sopranos, two altos, two tenors and two basses, and they certainly would have attracted large audiences in this country had not their time been so limited.

In sending new choir music to be graded, it is requested that sacred songs, duets and trios be omitted, as only four part choir selections are noticed. Some pieces kindly sent, have not sufficient merit to warrant calling attention to them, and it is a rule followed that music open to criticism will not be mentioned, as the gradings and selection are for the aid of choir leaders rather than for critical notice.

Grade I.

Anthem—"Thou Wilt Keep Him in Perfect Peace." Solon Wilder. Key of A♭. 3-4 moderato. 2 minutes. 5 pp., 8c. Soprano to F. For chorus without solos.

Recessional Hymn—"We March, We March to Victory." Joseph Barnby. Key of C. 4-4 marcato. 1 minute to each verse. 3 pp., 5c. Soprano to F. Chorus throughout.

Jubilate Deo—"O Be Joyful in the Lord." H. P. Danks. Key of G. 4-4 allegretto. 2 minutes. 5 pp., 10c. Soprano to G. Chorus with soprano or tenor solo.

Evening Hymn for Vesper Service—"Once Again the Day Hath Flown." W. F. Sudds. Key of F. 2-4 andante. 1½ minutes. 2 pp., 6c. Soprano to F. For quartet or chorus without solos.

Trio Anthem—"O Send Out Thy Light." Carl Bruche. Key of F. 4-4 moderato. 2 minutes. 2 pp., 6c. Alto to C. For alto, tenor and bass.

Bonum Est—"It Is a Good Thing to Give Thanks." H. P. Danks. Key of D. 4-4 allegretto. 3½ minutes. 5 pp., 10c. Soprano to G. Chorus with soprano and bass solos.

Harvest Anthem—"Praise Waiteth For Thee." Carl Bruche. Key of C. 6-8 moderato. 2 minutes. 4 pp., 8c. Soprano to F. Solo for soprano or tenor, with chorus.

Anthem—"O Come Let Us Worship." W. F. Sudds. Key of D♭. 4-4 andante. 2 minutes. 2 pp., 6c. Soprano to F. Soprano solo followed by quartet or chorus.

Benedic Anima Mea—"Praise the Lord, O My Soul." H. P. Danks. Key of D. 4-4 allegretto. 3½ minutes. 4 pp., 8c. Soprano to E. Chorus with soprano and alto solos.

Anthem—"I Will Greatly Rejoice in the Lord." W. F. Sudds. Key of D. 3 4 animato. 2 minutes. 3 pp., 8c. Soprano to F♯. Chorus with duet for soprano, or alto and tenor.

Evening Prayer for Vesper Service—"The Light of the Evening Now with Gloom is Bending." M. Hauptmann. Key of F. 2-2 larghetto con moto. 2 minutes. 6c. Soprano to F. A sacred four part song without solos.

Unison Anthem. Jubilate Deo—"O Be Joyful in the Lord." Harvey Löhr. Key of C. 3-2 allegro. 2 minutes. 2 pp., 6c. Highest note, D. All voices in unison with full organ accompaniment.

Unison Te Deum—"We Praise Thee, O God" Harvey Löhr. Key of C. 3-2 allegro. 5 minutes. 6 pp., 8c. Highest note, D. In unison throughout with full harmony for organ. From the "Service in C."

IN THE MUSICAL WORLD

AMONG OUR SCHOOLS AND TEACHERS.

On October 14 a celebration of the feast day of St. Theresa was held at the Rideau Street Convent, Ottawa, Canada.

An interesting recital was given by the pupils of Miss Minnie Jacobs' Kindergarten Class (place not mentioned) on October 4.

The Wannita Quartet, assisted by Miss Johnson, pianist, recently gave a concert at Hackneys, Pa., under the direction of Edgar Throckmorton.

Mr. Frank Le Fevre Reed, fellow of the American College of Musicians, has opened a studio in Cincinnati, where he will teach piano and theory.

Miss S. C. Very is giving her third course of five musical lectures under the auspices of the Cecilian Club, of Freehold, N. J. Her subject is: "Homes and Haunts of Composers."

Findlay (Ohio) College Conservatory of Music, has been doing excellent work and offers a comprehensive course of study. Its pupils' recitals evidence thorough training and excellent judgment.

S. Dwight Smith, organist, and R. Russell Maxwell, vocalist, gave the opening concert on a new organ in the Presbyterian Church at Orrville, Ohio, recently. They were appreciated by a large audience.

Two concerts were given at the studio of Mrs. Strelitz-Davis, San Francisco, September 20 and 27, by pupils of Mrs. Davis and by Mrs. Davis, assisted by H. Strelitz, 'cellist. Mrs. Davis's program inclued the first movement of a Beethoven Concerto.

Mr. T. L. Rickaby has been doing a good work at Taylorville, Ill. The season of 1900-1901 was signalized by a series of concerts by his pupils and his choral society, which were of a high order of excellence. Mr. Rickaby is an educator, and his work and influence are elevatiug.

Mr. C. Rupprecht, of St. Louis, gave afternoon and evening concerts on the occasion of the opening of the new pipe organ in the Evangelical Lutheran Church, at Wellsville, N. Y., on Sunday, October 6. He also played a good program in Trinity Church, St. Louis, on October 20.

Baylor Female College, located at Belton, Texas, is striding ahead in its music department, beyond the attendance of any former years. The large influx of students is composed of a higher musicianship and includes a larger number of music teachers. The improved general standing of the music department points clearly the methodical and systematic organization of its skillful music director, Dr. Eugene E. Davis.

Mr. William Irving Andruss, Director of Music at Doane College, Crete, Nebraska, for the last four years, has accepted a call to a similar position in Pomona College, Claremont, California. A concert with a varied and attractive program was one of the features. It was attended by a large number of former pupils and friends. The formal opening of the new library in which the Alumnæ Library Association and the Youville Reading Circle will hold their sessions, also took place. The day was also the 200th anniversary of the birth of Madame d'Youville, foundress of the Grey Nuns, who established the convent.

The following program was given by pupils of Mrs. Caroline Woods Howell, at Worcester, Mass. It is worth emulating: Trio—Down in a Dewy Dell, Smart; Song—While the Stars Look Foudly Down, Carter; Violin—(*a*) Le Chant des Fileuses, Hollender; (*b*) Concert Mazurka, Wieniawski; Song—Love's Serenade, Mawson-Marks, Duet—Sing On, Denza; Aria—(Il Re Pastore), Mozart; Duet—Hark to the Mandolin, Parker; Song—My Redeemer and My Lord (Golden Legend), Buck; Trio—Lift Thine Eyes (Elijah), Mendelssohn; Song—Bedouin Love Song, Jordan; Violin—Rhapsodie Hongrois, Liszt; Song—Why Art Thou Cast Down, Oh My Soul, Wooler; Trio—Excelsior, Berger; Aria—(Lucia di Lammermoor), Donizetti; Song—Toreadors Love Song, Couchios; Trio—Lullaby, Brahms.

Mr. Edgar L. Justis, assisted by Mr. Edward Watson Pedrick, baritone, and Mr. Stanley Cooper Muschamp, Jr., accompanist, gave a piano recital in Centenary M. E. Church Chapel, Camden, N. J., on Thursday, October 17. The program follows: Sonata, Op. 26: Andanta Con Variazione—Scherzo: Marcia Funebre Sulla Morte D'un Eroe—Rondo, Beethoven; The Prophet Bird, Machstucke No. 4, Aufschwung (Soaring), Schumann; Willkommen Mein Wald, Franz; The Horn, Fieger; Three Dances—Norwegian, Grieg; Hungarian, David-Liszt; Polish, Scharwenka; La Savane (Ballade Creole), Last Hope, Pasquinade, Gottschalk; Danny Deever, Damrosch; Mazurka, A flat, Nocturne, F major; Fantasie Impromptu, Waltz, C sharp minor; Tarentelle, Chopin; Hark! Hark! the Lark, Schubert-Liszt; Polonaise Heroique, Liszt.

Miss Johnson, contralto, assisted by Miss Gertrude A. Cooley, reader, and Miss M. Ethel Nichols, accompanist, gave their fifth song recital in Elmira, N. Y., October 10. The program follows: Songs—(*a*) Bleibe, Abend Will Es Werden, Ries; (*b*) Ihr Lied, Ries; (*c*) Si mes vers avaient des ailes, Hahn; (*d*) Soupir, Bemberg; Reading—An Object of Love, Wilkins; Song—Oh! for a Burst of Song, Allitsen; Reading—Scene from "The Kentucky Cardinal," Allen; Aria—Gavotte from "Mignon," Thomas; Reading—The Going of the White Swan, Parker; Old English Songs—(*a*) Drink to me Only with Thine Eyes. (*b*) When Love is Kind, arranged by A. L.; (*c*) The Three Fishers, Hullah; Readings—(*a*) Angelina Johnson, Dunbar; (*b*) Iphin; Songs—(*a*) The Sunbeam's Kiss, Gaynor; (*b*) The Gingerbread Man, Gaynor; (*c*) The Journey is Long, Coombs; (*d*) The Slumber Boat, Gaynor.

The Misses Crawford, of Brooklyn, announce that, owing to the success of their Musical Picture Classes of 1901, under the direction of Mr. Henry Holden Huss, they will give a course of five during the season of 1902 for pupils of all ages, and mothers, that are interested in the study of music. The aim of these classes is to prepare students for a more intelligent understanding and appreciation of the concerts which they attend, and to awaken an interest in the lives of the musicians and their works. New scenes are especially designed for these classes by an eminent artist, which will be thrown upon a screen illustrative of the notes given and music played. In the picture class, it is proposed that pupils take turns in playing, and the pieces, no matter how simple, will be critically reviewed by Mr. Huss, not neglecting the purely aesthetic side of the compositions. Anecdotes of the lives of the composers under discussion, in some cases the special circumstances under which the pieces were composed, will be given, accompanied by questions and hints, which aid and stimulate the child's imaginative faculty, thus leading them step by step to understand the tone language. If it is found feasible, short, simplified explanations of some of the music to be performed at the Young People's Symphony Concerts will be given. Mr. Huss will give a concise analytical explanation of compositions requested by pupils and teachers, making the chief musical themes distinct and recognizable by playing them separately as well as in their place in the whole work, to press the salient points in unfamiliar musical work.

Mr. N. J. Corey, familiar, by reason of his contributions, to MUSICIAN readers, lectured at Cornell University, on October 28. His subject was "The Great Man in Art." The musical illustrations were "Vorspiel to Parsifal," "Valhalla Music" from the Rheingold," "Liebestod" from "Tristan and Isolde," and "Magic Fire Scene" from the "Walkure."

AT HOME.

Fenelon B. Rice, director of the Oberlin (Ohio) Conservatory of Music, died of heart failure the last week of October.

The Kneisel Quartet announce November 11, December 16, January 20, February 24 and March 24, 1902, as the dates for the concerts of its fifth Philadelphia season.

Frederick Archer, the celebrated organist, died recently at his home in Pittsburg. He was organist at the Carnegie Hall, in that city, and has done much for the musical advancement of the city.

Mme. Labori, wife of the celebrated French lawyer who defended Dreyfus, will visit friends in Montclair, N. J., this fall. Mme. Labori is a pianist of considerable reputation, and was formerly the wife of Vladimir de Pachmann.

Emil Fischer, the famous German basso, who will long be remembered for his impersonation of Hans Sachs at the Metropolitan Opera House, has taken studios in New York and will teach singing and interpretation of German Lieder during the coming season.

It is said that a deficit of several hundred dollars resulted from the recent Worcester Festival, the blame for which is placed by the management on the inability of Mme. Emma Eames to appear. The management is reported to have paid Mme. Suzanne Adams $1,000 as a substitute for Mme. Eames.

Henry Wolfsohn, the manager of artists, has issued his sixteenth annual catalogue in the shape of musical date and engagement book. The little volume is very convenient, and besides containing information concerning musical events and artists, is so arranged as to make an admirable appointment book. It costs 25 cents.

Dudley Buck, the composer and organist of Holy Trinity Church, Brooklyn, is suffering from nervous prostration due to overwork, and is threatened with complete loss of eyesight. Physicians hope that his sight may be restored by a long rest. He has been granted an indefinite leave of absence by his church and will probably go to Europe.

The Department of Education, Brooklyn, N. Y., is providing a course of four analytical piano recitals. These are to be given by Dr. Henry G. Hanchett. They are entitled: (1) Material of Musical Compostion; (2) Methods of Musical Composition; (3) Merits of Musical Composition; (4) Masters of Musical Composition. An annotated program is provided. The whole arrangement is of the highest order of excellence.

The Directors of the Musical Art Society of New York have decided to organize an auxiliary choir in order to produce more effectively the larger polyphonic choral works. Applicants for membership in this choir must have good voices, read readily at sight, and be trained and artistic singers. They will receive first consideration in filling vacancies in the original choir of the society. Mr. Frank Damrosch is the conductor.

The dates of the concerts of the Philadelphia Symphony Orchestra are Saturday evenings, November 23, 30; December 14, 21, 28, 1901; January 4, 18, 25; February 1, 15; March 1, 8, 15, 22, 1902, with public rehearsals of Friday afternoon preceding. The soloists are Josef Hofmann, Mme. Schumann-Heinck, Fritz Kreisler, Harold Bauer, Ossip Gregorowitsch, Jean Gerardy, Guyilm Miles, Emil Liebling and Gertrude May Stein.

Ten lectures on "The Life and Works of Richard Wagner" are to be given in Cnickering Hall, Boston. Mr. Carl Armbursterr is the lecturer and Miss Pauline Cramer gives vocal illustrations. Mr. Armbursterr gives also a Lowell Institute Course. The dates for the course at Chickering Hall are Thursday, October 31; Monday, November 4; Thursday, November 7; Monday, November 11; Thursday, November 14; Tuesday, November 25; Tuesday, December 3; Thursday, December 5.

During the coming season the Philadelphia Orchestra will give Fourteen Concerts on Saturday evenings, and Fourteen Public Rehearsals, at popular prices, on the preceding Friday afternoons. This plan has been successfully followed by the Symphony Orchestras of Boston, Chicago and Pittsburg. Both the evening and afternoon concerts will take place in the Academy of Music; the programs will be substantially the same, with the exception of the soloist. At the evening concerts vocal and instrumental soloists of the highest rank will assist.

The Chicago Orchestra, Theodore Thomas, conductor, announces a series of historical programs. Of them Mr. Thomas is reported to have said: "My idea is to illustrate not so much the development of musical form as the growth of the orchestra and the gradual broadening and deepening of orchestral expression. For this reason the composers shown will be represented by those works in which they have made some change or advance in the manner of instrumentating or the make-up of the orchestra as existent at the time they wrote. Works in which they helped on toward the perfecting of the musical form—the symphony, the overture, the symphonic poem, for examples—have received less consideration in the present series. "The result will be, I hope, that the patron of the six concerts will be able to form a comparatively clear idea of how the orchestra has grown, developed and increased in size, complexity and powers of expression during the last three centuries. The material is so abundant that twelve instead of six concerts could easily have been included in the series—this being especially the case as regards the programs containing the works of the earlier composers, but the six will suffice to give the public an insight into the music of the past."

ABROAD.

A life of the eminent violoncellist Piatti, who died on July 18, is being prepared by Mr. Morton Latham.

Paderewski's concert tour in Germany will begin on October 24, and will embrace twenty-eight concerts between that date and the middle of December.

The degree of Doctor *honoris causa* has been conferred upon Joseph Joachim by the University of Göttingen on the occasion of his recently completed 70th year.

It is rumored that Mascagni and Puccini will collaborate in an opera, for which the libretto, taken from a sentimental French novel, is being written by Giacosa and Illica.

The new International Bach Society, though organized only a year ago, has already more than 500 members. Its object is to secure the performance of Bach's neglected masterpieces.

The magistrates of the French city of Lille have voted 150,000 francs for the arrangement of an international prize-contest for choral societies, brass bands, trumpeters, and mandolinists, on August 15 and 16, 1902.

Richard Strauss will direct six symphony concerts with the Tom-Kunstler Orchestra in Kroll's Theatre this winter. The dates are October 21, November 18, December 16, January 13, February 10 and March 10. The concerts will be known as the Richard Strauss Symphony Concerts.

Dr. Antonin Dvorâk has been appointed director of the Conservatorium, Prague, upon the retirement of Anton Bennewitz, who occupied the important post for twenty years. Dvorâk, who, it will be remembered, was the director of the National Conservatory in New York from 1891 to 1896, is in his 60th year.

The German Emperor has conferred upon Dr. Camille St.-Saens the great honor of the Prussian order "Pour le Mérite" (Civil Division). It appears that the order may be bestowed upon thirty Germans and thirty foreigners. The latter, however, must be recommended to the Kaiser by the unanimous vote of the Academies of Science and Arts.

English composers are being well treated by the choral societies. At this year's Gloucester Festival the list of novelties included a Biblical scene, "Emmaus," by A. Herbert Brewer; a dramatic scene by Sir Frederick Bridge, entitled "The Forging of the Sword;" a motet by C. H. Lloyd, and orchestral works by Cowen, W. H. Bell, and Coleridge Taylor.

Considerable interest was manifested last April in the performance in Dresden by the Mozart Society of Mozart's great mass in C minor, which was left unfinished by the master, but was completed by Hofcapellmeister Schmitt in accordance with Mozart's sketches. This mass is now to be made generally accessible, as the score, and also a version with pianoforte are being printed.

The *Musical Times* of London prints a facsimile of a concert given by Wagner in St. Petersburg on March 6, 1863, together with some amusing extracts from English criticisms of Wagner in that period. One, written by the famous Davidson in 1856, begins with this scornful sentence, to which time has given a delightfully grotesque turn: "Robert Schumann has had his innings and been bowled out—like Richard Wagner. 'Paradise and the Peri' has gone to the tomh of the 'Lohengrins.'"

According to the New York *Herald*, M. Gailhard, impressario of the Paris Grand Opera, and M. Jean de Reszke have both cabled Mr. Grau asking him to release Mlle. Bréval from her contract, so that she may sing Brünhilde to M. de Reszke's Siegfried in next winter's Paris production of the Wagner drama. Mr. Grau, however, holds that having promised Mlle. Bréval to the public he has no right to disappoint those who wish to hear her; so Bréval will be here next winter.

While Johann Strauss died without achieving his ambition of writing a genuine grand opera, his "Fledermaus" has, since his death, been produced in the leading German cities as a comic opera with the best local singers in the casts. His "Gipsy Baron" also has achieved the distinction of being produced in a grand-opera house, at Carlsruhe, under no less a conductor than Mottl; and it is probable that his go d example will be followed elsewhere. Strauss's music is too good to be allowed to die after the brief run usually allotted to operettas.

Liszt was invited to dine with a French general, Rome being then in the hands of the French. After dinner some of the younger officers of the dinner party asked the master to "play something." He refused, gently at first, and then angrily. "But, Master," said one of the young fools, "you were invited to dinner to 'play something.'" At this Liszt said, "*tres bien!*" He sat at the piano, thundered a few chords on the piano which broke the keyboard in less than a second. Then, rising, with a face white with passion, he turned to the officers and said: "There, gentlemen, I have paid for my dinner!" And he left them to their thoughts.

The following by a Munich critic, Oscar Merz, as to the reason why Frauleln Ternina never ventured to sing Isolde in Germany till this year, will interest our readers. In America, he explains, the audiences do not insist on correct performances of great works of art, and the singers, instead of interpreting operas in the sense intended by the composer, adapt them to their individual tastes and capacities. Such rude and barbarous folks as Americans, it was, therefore, easy enough for Frl. Ternina to please in any role she chose, including Isolde; but in civilized Germany she preferred to wait until she could sing this role under such exceptionally favorable conditions as were afforded by the opening of the new Wagner Theatre in Munich.

A Vienna periodical prints for the first time a letter written by Mozart at the age of nineteen, after the first performance in Munich of his opera "La Finta Giardiniera": "Thank heaven! my opera was produced yesterday and met with such good success that I cannot possibly describe to you the noise made. After every aria there was a terrible hubbub and hand-clapping. When the opera was over, the whole intermission, till the ballet began, was taking up with applauding and bravo shouting. I have kissed the hands of their Highnesses, who were all very kind. The Bishop sent me a message of congratulation early this morning from Chiemsee. Next Friday the opera will be given, and I am much needed at its production."

Saint-Saëns' opera, "Samson and Dalila," had twenty performances in Dresden last season—a larger number even than any of Wagner's operas or Paderewski's "Manru." It attracted crowded audiences at every repetition and will no doubt be one of the great features of the present season. Sixty-one different operas were sung in Dresden last season, six of them being entire novelties for that city, and five of them revivals of former favorites. The total number of operatic performances given was 279. Many complaints had been heard in recent years that the Dresden public refused to patronize anything except the Wagner operas, and every se sible person is glad now that Saint-Saëns and Paderewski have come to the rescue and broken the Wagner monopoly. But Paderewski's admirers now ask themselves anxiously: "Will he, like Liszt, give up the piano entirely and devote himself solely to composition?"

Mme. Gounod, widow of the composer of "Faust," recently related the story of her first meeting with and engagement to the composer. She did not know him at the time when his early opera, "Sapho," was produced. This opera met with no great success, but it had its admirers, among them Berlioz and the poet Ponsard, who asked Gounod if he would be willing to write the choruses for his five-act tragedy, "Ulysse," which was destined for the Theatre Francois. Gounod felt flattered by the offer, and at once set to work on the music. One day he came across the well-known pianist and conservatory teacher Zimmermann, who asked him what he was doing. "I have just written the choruses for the tragedy 'Ulysse,'" replied Gounod. Zimmermann thereupon invited him to his house, where his guest sang and he accompanied him on the piano. Gounod was noted among his friends (Saint-Saëns, for example, writes with enthusiasm on this topic) for the marvellous expressiveness of his singing, in which no professional equalled him. Zimmermann's daughter, who happened to be present on this occasion, was so overcome that she fainted away, and two months later she was betrothed to Gounod. It was not until after their marriage that he found his pen remunerative. The first hundred-franc note he earned was for his "Ave Maria," which has since yielded the publishers hundreds of thousands. For his "Sapho" score he had not been able to find a publisher, so he had it printed at his own cost. With the "Ulysse" choruses he was more fortunate, as the Escudier Brothers offered to print them free of cost to him.

PUBLISHERS COLUMN.

The music supplement of this number contains eight pieces, retailing in sheet form at from 25 cents to 40 cents each—amounting to a total of $2 55. Following are the eight pieces referred to above :

In the Wood. Song. W. C. E. Seeboeck.
Smooth, flowing melody joined to an exquisite poem by Annie A. Starkweather.

Humoresque. C. Chaminade. Op. 25, No. 2.
Extremely interesting rapid fiuger study by a celebrated composer.

Annual Encampment. C. Heins. Op. 231.
Brilliant and very striking military movement by a popular writer.

Petite Polka. G. Horváth. Op. 26, No. 6.
Rapid, brilliant and extremely showy piece in the second grade.

While Madge and I Are Swinging. S. Landsberg.
A cheerful and bright song of the fields. Words by M. L. Osborne.

Wedding Dance. I. Székely.
Joyous and inspiriting composition in the second grade.

Menuet. A. Allen.
Simple and pleasing melody, with bass in single notes.

Short Service Prelude for the Organ, No. 7. W. H. Clarke.
For description, see Organ Department of this number

Each number of THE MUSICIAN contains at least twenty-four pages of music, the average cost of which —in sheet form—is about $2.50. As it is our desire to include those compositions which will prove most useful, we solicit and hope to receive the opinions of our readers in reference to selections for future numbers.

***

The contents of the November MUSICIAN cover a wide field. A legitimate complaint of the accompanist is set forth in "Soloists and the Golden Rule," by Fay Simmons Davis, while Effie W. Munson touches a vital point in "Topsy Turvy Musical Education." The discussion of the right method of playing Grace Notes is continued in the Teachers' Forum, in answer to an inquiry. "The Relation of Teacher to Pupil," one of the subjects announced in the prospectus, is interestingly written about by a practical teacher, and Dr. Hanchett concludes his series on "The Study of a Sonata." "How to Handle Pupils," another of the announced subjects, is treated by Karleton Hackett in a forceful way. The humorous story, "Scraps of Paper," lightens the issue with a bit of relaxation. These are but a few of the subjects with which it is filled, all of which are equally pertinent.

***

The December (Christmas) Number of The Musician will be an unusually large and attractive issue. The editor authorizes us to say that he has already secured a number of especially valuable and interesting articles by the most prominent writers, and a choice variety of illustrations—many of them entirely new. Each department, including the music supplement, will be increased, and no expense will be spared to make it excel, in every respect, all previous effort. Profiting by past experience, we will endeavor to print an edition large enough to meet all demands, nevertheless we shall be glad to learn, at the earliest possible moment, how many additional copies you may need—this applies to all subscribers and teachers—as we want to be in a position to meet all demands.

We earnestly request the active interest and coöperation of our readers in extending THE MUSICIAN'S circulation and field of usefulness during the coming year—not only by prompt renewals of expiring subscriptions, but by securing and sending us as many NEW subscriptions as it is possible to obtain.

***

The Musician's Premium List. This list, made up of musical works and articles needed by all musicians —students as well as teachers—offers some remarkable inducements. With but little effort, each of our subscribers can secure one or more new subscriptions, and we offer liberal premiums for any interest they may take in extending the circulation of this journal. The list, printed on the second cover page, will enable you to build up a library of choice musical works without the expenditure of any money.

***

THE MUSICIAN *wants to keep in close touch* with teachers and schools in all sections, and the editor believes that space devoted to reports of concerts, recitals, lectures on musical subjects and musical events of general interest would prove interesting to readers. You can aid him in making an interesting feature of this department by sending reports of musical happenings that will interest your fellow teachers in other localities.

Attention is called to our Special Offer to send Music On Sale to Schools and Teachers. Full particulars will be sent upon request. Our success in obtaining and holding the school and teacher trade is based upon the fact that in making selections we use only such music as will prove useful. We do not follow the plan, adopted by so many dealers, of taking the first assortment that comes to hand, regardless of the special needs of the customer. When you patronize us you can depend upon receiving music selected by experts, and selected with the special object of supplying just what is wanted. Only the latest and best publications are used in making these selections, insuring a nicely balanced and well contrasted supply. If you have never tested our ability in this line, *give us a trial.*

***

How Many New Subscribers will You Send Us? Now is the time when our readers can demonstrate their belief in the value of THE MUSICIAN as an educational factor. The large percentage of renewals is an indication of the esteem in which its readers hold it, but they can do the magazine, themselves, and the large army of earnest students who are ever seeking additional help, incalculable good by securing new readers for it. It is not necessary to use space here in pointing out its value as an aid to teaching and study ; our readers know all about this and are constantly writing us about it. We want them to tell others as well as the publishers. If you believe in THE MUSICIAN, tell your pupils and friends about it, build up its clientele and every advance made in the subscription list will be reflected to you in additional improvements.

***

Are You Certain that you are buying your music at as good rates of discount as your fellow teachers? If not, you are doing business at a *disadvantage. We claim* that the discounts we allow teachers are MUCH BETTER than offered by other dealers, and unless you have had our latest quotations, you *cannot* be sure that you are not paying *more* for your supplies. This applies not only to our own publications, but to ALL the music you use. On our own publications we offer such liberal discounts (which will be supplied on request) that, no matter how far distant you are, or the cost of Postage or Express, we GUARANTEE you a saving when purchasing from us. In this connection you should remember that we send liberal selections of the latest and most desirable music "ON SALE," with the privilege of returning and having credited, at the end of the teaching season, all that has not been sold or used. Full particulars regarding this department of our business may be had on request. We also offer numerous additional advantages which it is impossible to mention in the limited space of this page. *Write us!* No trouble to answer your letters and inquiries. It will pay you to correspond with a house that is progressive and up-to-date in all of its dealings. We can save you time, trouble and money. We suggest that you give us an opportunity to demonstrate this fact by sending us a trial order ; it will surely bring us your steady patronage.

***

Music for Christmas. We carry a complete line of the latest and best Carols, Services, Cantatas, Anthems, etc., and are prepared to fill quantity orders at exceptionally low prices. Sample copies will be sent on selection, if desired.

***

Readers of THE MUSICIAN who desire to keep posted upon all new publications of merit, should carefully read the advertising columns of THE MUSICIAN, from which they can secure much valuable information. Any of these publications can be procured through us at the least possible cost.

***

Branzoli's Theoretical and Practical Method for the Mandolin. On page 361 we announce the publication of a new, revised and enlarged edition of this celebrated instructor. Without exception, this is the best mandolin instructor ever published, and in very many respects our edition is superior to the original or any other reprint See our *Special Introductory Offer*, which applies to all orders received prior to November 23d.

***

Musicians—A New and Instructive Game of Musical Biography, for Teachers or Pupil, by C. R. Tinsley. It will familiarize the player with the names, birthplaces, ages and other important facts relating to the lives of the great composers, teachers and performers. The classic, romantic and modern schools are treated in a manner that will enable a child, in a short time, to distinguish the characters that represent each school. The game awakens interest in musical history, because the player is brought in touch with the personality of all of the well-known musicians.

We have secured a limited number of this game, which we are enabled to offer (applies only to the lot in hand) at 45 cents, *postpaid.* It will not be sent on approval.

SOME THINGS OUR READERS SHOULD KNOW AND REMEMBER:

That We Handle and Supply Anything in Music.

That We Are Large Publishers of sheet music—vocal and instrumental—all of which are listed and fully described in our Catalogue—free to any address.

That We Publish many valuable books, in addition to the seventy-three numbers of the "**Hatch Edition,**" listed on page 363 ; all are fully described in our Catalogue.

That Our Publications Are Noted For Correctness and Beauty.

That We Carry a Complete Line of All Foreing and American Publications.

That We Supply all Music mentioned in the articles appearing in THE MUSICIAN ; all music included in the lists of Desirable Choir Music ; all publications mentioned in the advertising columns of THE MUSICIAN.

That we send liberal selections of the latest and most desirable music "ON SALE," with the privilege of returning and having credited, at the end of the teaching season, all which has not been sold or used.

That Our Facilities For Promptly Filling All Orders Are Unequalled.

That All Music is Supplied Teachers at More Liberal Discounts than those offered by any other house.

That You Should Have Our Catalogues and Professional Discounts, both of which will be sent upon request. They will interest you.

***

Liberal Selections Sent On Sale. While we are pleased with the increase of our business in this line, we are especially gratified by the expressions of satisfaction received from customers concerning our selections. It's a satisfaction to know that our judgment is in line with the wants of teachers who are seeking the latest, best and most useful teaching material. As there is a large and increasing demand for meritorious pieces in the easier grades, our efforts have been directed to the collection and publication of the best that could be obtained in this country and Europe. Each piece has been carefully edited, and all are issued in the most attractive form. An almost endless assortment of the best material, combined with long experience in making selections for all special purposes, makes good our claims of being specialists in this particular line, viz. : *the selection of music suitable for your especial needs.*

***

If in need of a Metronome, one that will give entire satisfaction (all others are worthless) and last a lifetime, send your order to the Hatch Music Co. Owing to the increased cost of manufacturing Metronomes, prices have been advanced by nearly all dealers. We still offer them at the old prices—another proof of our claim that you save money by purchasing from us. We handle only the best makes, and guarantee every instrument for two years. All complaints receive careful attention and prompt adjustment. Our prices ($2.50 and $3.50) are very low, and we offer an extra discount on orders for six or more instruments.

***

We have exceptional facilities for printing sheet music and music books. Upon receipt of manuscript, with full particulars concerning the style of publication desired, we will submit complete estimate.

***

A Revised and Enlarged Edition

—OF THE—

NATIONAL GRADED COURSE.

While the editors of this Standard Graded Course have always been confident of its superiority, and confident that it has been, since the issue of the first edition, the best and most practical graded school—superior in every respect to any similar publication—they have periodically revised the work so as to keep it right-up-to-date. Whenever a teacher suggests a change, the suggestion is given careful consideration, and if it will strengthen the work in any respect, it is very cheerfully accepted and adopted. Neither care nor expense has been spared to make it perfect.

During the summer, the editors revised the entire work, and the new editions of Grades I-IV are now ready. The new editions of Grades V-VII will follow shortly. We desire to call especial attention to the new edition of Grade I. In order to include additional valuable matter, and to make the progression perfectly smooth and natural, it was found necessary to enlarge this number, which now contains fifty-four pages. We believe that it is, in every respect, a *perfect* work—that it is the best elementary work published. It merits the careful consideration of every earnest teacher who is desirous of using the BEST.

We invite examination and critical comparison, and will cheerfully send Grade I, or the entire Course—seven grades—subject to approval. We are willing to assume all of the risk in order to have you the test merits of our claims, and of the Course.

THE BURROWES MUSICAL KINDERGARTEN METHOD

INSTRUCTION FOR TEACHERS BY HOME STUDY

TEACHERS are reminded that the Burrowes Method may be advantageously acquired at any season of the year.

Write for particulars.

THE BURROWES METHOD was built up for children and from actual study of the needs, preferences, character, and even the whims of children. The authoress has taught a musical kindergarten for many years, during which she has composed songs, invented games, and constructed apparatus too numerous and varied to mention or describe; and of these only the most valuable have been retained. Everything that was dull, cumbersome, ineffective, or unchildlike has been abandoned, and what remains has been tested through and through, and its value proved beyond the shadow of a doubt. There is nothing in it that is not agreeable and entertaining. **IT IS NOT BUILT ON MERE THEORIES.** It is not the inspiration of a day. It is, on the contrary, the **CREAM OF FIVE YEARS OF SPECIAL EFFORT,** and the fruit of many other years of toil and study. The results speak for themselves.

MUSIC TEACHERS OF ALL GRADES should investigate this work. **ADVANCED TEACHERS** will profit largely by establishing kindergartens in charge of an assistant or partner, thus creating a preparatory department which will act as a feeder to the advanced classes. The advantages of the Method to **YOUNG TEACHERS** are obvious.

All Teachers who have not seen the Art Souvenir Booklet (mailed Free to Teachers) should send their addresses at once.

A New, Revised and Enlarged Edition of

BRANZOLI'S

THEORETICAL AND PRACTICAL METHOD FOR THE MANDOLIN

English and Italian Text. **Used in All the Leading European Schools.**

Branzoli's is, without exception, the best theoretical and practical method of instruction for the Mandolin ever published, and it is so well and favorably known to teachers generally that a detailed description of the work itself seems needless.

Our edition, reprinted from the latest European edition, after careful revision and editing by Mr. Benj. F. Knell, embodies a number of new and important features, including: values of notes and rests, intervals and minor details of musical theory; additional examples designed to show, in the most explicit manner, how the various exercises should be played; clear instructions regarding the pen stroke needed for varying degrees of speed; lucid and easily understood examples of the various graces, and an illustrated explanation of triplet playing; all positions are clearly marked, and the entire work has been fingered with great care.

A unique and very important feature is the introduction of Mr. Knell's "Tone Studies," illustrated by half-tone cuts showing hand positions.

Our edition contains 168 progressive lessons, a choice collection of duets, and the scales and chords in all major and minor keys. All inaccuracies of the original edition were corrected and all uncertain examples clearly explained. For the purpose of placing them in direct connection with the subjects under consideration, a number of studies have been transposed. Particular attention is called to the editor's annotations, which cannot fail to prove valuable to both teacher and pupil.

Our edition is printed from new plates. The engraving, paper, printing and binding are superior in every respect—each the best of its class.

Ask for the Hatch Edition. Take no other, if you want the best.

Half Cloth Binding. Price, $2.00.

Special Introductory Price: All orders received prior to November 23d, will be filled at $1.00 per copy, postpaid. This special introductory price applies only to orders accompanied by cash. If to be charged, the postage (20 cents) will be added.

FLETCHER MUSIC METHOD—SIMPLEX AND KINDERGARTEN

The following are a few of the many endorsers of the Method, and a partial list of the Conservatories in which it is taught:

DR. WILLIAM MASON, New York.
JOHN ORTH, Boston.
DR. HUGO RIEMANN, Leipsic.
SIGNOR AUGUSTO ROTOLI, Boston.
H. M. FIELD, Leipsic.
EDWARD FISHER, Director Conservatory of Music, Toronto.
W. O. FORSYTH, Director of Metropolitan School of Music, Toronto.
SIGNOR GARCIA, London.
M. ANAGNOS, Director of the Perkins Institute, Boston.
CAVEN BARRON, Dir. London Conservatory of Music, London.
DR. GERRIT SMITH, New York.
W. MACDONALD SMITH, London, England.
THOMAS TAPPER, Boston
FRANKLIN TAYLOR, London.
WILLIAM TOMLINS, Choral Director World's Columbian Exposition, New York.
JAROSLAW DE ZIELINSKI, Buffalo.
ALLAN LINDSAY, Director Troy Choral Club, Troy.
KATE S. CHITTENDEN, Vice-Pres. Inst. of Applied Music, N. Y.
MAX WEIL, Director Weil Conservatory, Halifax.
GILBERT R. COMBS, Director Broad St. Conservatory, Philadelphia.
GILMORE BRYANT, Director Durham Conservatory, Durham, N. C.
MRS. KATHERINE FISKE, New York.
SAMUEL W. COLE, Boston.
WILLIAM CUMMINGS, Director Guildhall School of Music, London.

NORTHWESTERN UNIVERSITY SCHOOL OF MUSIC, Evanston, Ill.
FONTLEROY HALL SCHOOL, Roxbury, Boston.
DURHAM CONSERVATORY, Durham, N. C.
DETROIT CONSERVATORY OF MUSIC, Detroit.

Original Kindergarten System In America and Europe

THE AIM OF THE FLETCHER METHOD

Is to reduce the difficulties which the study of music causes to children and to give a Fundamental, Systematic and Logical Musical Education in a way that shall be thorough, natural and pleasurable, and thus make it possible for Music to exercise her threefold power and to develop the child physically, mentally and artistically.

FLETCHER MUSICAL ASSOCIATION

In connection with this system, and for the benefit of its teachers, the Fletcher Musical Association has been formed. The object is to promote unity and strength of purpose among the teachers, and to keep every teacher in touch with all new and good ideas which bear on the teaching of music to children.

Fletcher Musical Association Bulletin

This is a paper edited three times a year for the benefit of the Fletcher music teachers.

Evelyn A. Fletcher-Copp, the originator of the Fletcher Music Method, spent five years studying music abroad and has since successfully introduced her system in London, Berlin, Leipsic, Brussels and Paris. Already the demand in these foreign centers is so great that Mrs. Fletcher-Copp has arranged to teach a Normal class every second year in London or Berlin. The advantages to teachers of being brought in touch with the latest European musical ideas which this regular recurring visit to Europe entails are obvious. Realizing the inadequacy of teaching by correspondence, and recognizing the great value of the system musically, Mrs. Fletcher-Copp continually refuses applications from those who desire to study by mail, and her certificate of authorization to teach her method can only be obtained by those who study with her personally.

My Dear Miss Fletcher:

Allow me to convey to you the unanimous delight and interest expressed by the teachers of the Synthetic Guild after your demonstration. Personally your talk and the exhibition of your appliances filled me not only with admiration but gratitude. In these days when little children are set at such a multiplicity of studies, and such unreasonable demands are so often made upon teachers, it is a relief to know that some one has found an incline plane by which Parnassus may be reached even by the little folks. It seems as if your kindergarten system were a sort of tunnel through which true ideas may be carried into every intelligent method of either vocal or instrumental music, and as such all teachers must give you a hearty indorsement.

Yours very truly, KATE S. CHITTENDEN.
President of the Synthetic Guild.
President of the Metropolitan College of Music
Vice-President and Dean of the Faculty of the American Institute of Applied Music.

A few of many letters received from world-renowned musicians:

New York, Jan. 1, 1900.

My Dear Miss Fletcher:

I was deeply impressed recently with the force and simplicity of your Method. * * * There can be no discussion of the value of your Method of work because the results are perfectly in evidence and cannot be disproven—they speak for themselves. With best wishes for your success in this country, I am

Sincerely yours, GERRIT SMITH,
Hon. Pres. American Guild of Organists.
Past Pres. Manuscript Society, New York.

Mr. William H. Cummings writes:

The Guildhall School of Music,
Victoria Embankment, E. C. (Near Blackfriars Bridge)

* * * It was evident that Miss Fletcher possessed an exceptional gift as a teacher, and that her system would very speedily enable young students to attain proficiency in all the essential knowledge which is indispensable to vocal and instrumental performers.

WILLIAM H. CUMMINGS, Principal.

June 1, 1899.

In answer to your question regarding the Fletcher System, allow me to say that it has my strongest endorsement. Every school where a course of music is pursued should adopt this method.

Yours truly, ALBERT A. MACK,
Music Director at St. Mary's School, Raleigh, N. C.

I have taught the Fletcher Music Method now for about three years, with increasing satisfaction as to results. It has helped me wonderfully, not only directly with my junior pupils, but in broadening and deepening all my work, and solving many knotty problems of teaching. There is nothing one-sided about it, eye, ear, fingers, brain, memory, imagination, all are reached and made to contribute their share to the general musical culture. Further, it is a delight to the children, who learn easily, love their classes, and later on their practice, finding it no hardship, to the great surprise of their parents.

ROBERTA GEDDES-HARVEY, Mus. Bac.,
(Trin. College). Organist of St. George's Church, Guelph, Ont.

Dr. William Mason says

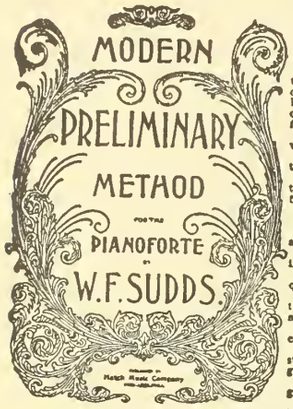
New York.

The Fletcher Method seems to me well adapted to the rapid and thorough accomplishment of its purpose because of its tendency to immediately arrest attention, to arouse interest and thus to promote a habit of mental concentration on the part of young children. Games, sports and pastimes constitute a powerful force in our early education because, through their agency, knowledge is quickly inducted and woven into each personal experience. Miss Fletcher's method being based upon this principle, appears to me well adapted to the accomplishment of the desired result, and with ease to the pupil, because the sense of drudgery is minimized.

For further particulars address E. A. FLETCHER-COPP, **Home Address,** 99 Francis St., Brookline, Mass. **New York Address,** 1125 Madison Avenue.

Standard and Popular Books Published and For Sale by the Hatch Music Company.

MODERN PRELIMINARY METHOD
FOR THE PIANOFORTE



Embodying the Latest and Most Approved Systems Conducive to Rapid Progress and Artistic Interpretation

By W. F. SUDDS.

As its title implies, this Method is modern, contains the newest ideas and their practical application. The bulky and voluminous instruction book is a thing of the past. The Method of to-day deals with *more* subjects than its predecessors, but deals with them in a terse and effective manner. It recognizes the importance of practical exemplification of the principles involved, but wisely leaves the application of various points to future study.

Among the many excellent features of the Modern Preliminary Method, we direct attention to the following:

The Rudiments are very progressive and explained with such clearness that the pupil cannot fail to comprehend them.

The Various Touches are clearly set forth and are accompanied by illustrations, drawn and engraved expressly for this work, showing the movements of finger, hand and arm.

The Correct Principles of Touch and Technic are illustrated by examples.

The Scales are introduced in an effective manner.

Proper Use of the Pedals, a matter generally disregarded, is given particular attention.

The Explanation of the Minor Mode, another subject seldom touched upon in works of this character, is such that it can be readily understood.

Five-finger Exercises are judiciously used, but not in the usual enormous quantity that disgusts and discourages the pupil.

The Musical Illustrations attending the various principles are taken from the best composers, of whom short sketches are given. This introduces a desirable amount of musical history.

The aim is to teach and illustrate one thing at a time. By a judicious contrast of subjects, weariness is avoided.

Four Hand Pieces are introduced, not merely for recreation, but to promote steadiness and inspire confidence in the pupil. This plan has the approval of all great teachers.

A Copious and Carefully Compiled Pronouncing Dictionary—a matter of great importance to a work of this character—is included.

It is a Complete Preliminary Method—a work which cannot fail to interest both the practical teacher and the earnest student.

MODERN PRELIMINARY METHOD is the result of many years' experience as a teacher, by an editor who needs no introduction to the musical public. It is a book of 144 pages (10 x 13 inches), printed from entirely new plates on the best grade of music-book paper.

Half Cloth Binding. Price, $1.00.

KULLAK'S SEVEN OCTAVE STUDIES
From the School of Octave Playing. Op. 48, No. 2.

Revised and Annotated, with Introduction and Practical Directions for Study, by

WILLIAM H. SHERWOOD.

While numerous exercises for the practice of octaves have been presented to the musical world by virtuosi and masters, Kullak's is the only method or "School" of octave playing that has become a standard. But good as they are in their original form, it is remarkable how much the usefulness of these studies has been enhanced by Mr. Sherwood's revision and annotations. A broad foundation embodying the general principles involved and the method by which the end may be most satisfactorily attained is laid in his Preliminary Remarks; instructions and suggestions for technical preparation are given in his "Notes on the Studies;" each study is *treated in detail*. Each movement of the hand and arm is designated by an ingenious device and these characters, elaborately used throughout the text, show the student *exactly* how the hand should approach and leave the keyboard in performing various passages. The progressive teacher will appreciate the importance of Mr. Sherwood's editorial work, and especially so since he gives, for the first time, his system of of instruction in octave playing.

Regardless of the great expense involved in the preparation of this edition, the price is the same as that charged for the ordinary reprint.

Paper Binding. Price, $1.25.

Classic Piano Solos for Young People
VOLS. 1-2.

ELEGANT COLLECTIONS BY WELL-KNOWN WRITERS.

Classics selected for the young are frequently of the dryest character and students are too apt to absorb the idea that good music *must be dull*. In the preparation of these collections the requirements of the youthful mind were kept in view, and the selection of works will prove that music of an advanced standard can be pleasing as well as useful in the formation of a correct and pure musical taste. These works are unequalled by any similar publications of corresponding grade. A critical comparison will establish our claims of superiority.

Paper, with Cloth Back. Price, $1.00 Each. Half Cloth. Price, $1.25 Each.

CLASSIC PIANO SOLOS
VOLS. 1-2.

Superb Collections by Eminent Authors.

While the contents of Volume 1 is largely made up of the works of the older masters, with but few exceptions the pieces included in Volume 2 are the works of the more modern classical writers, many of whom are still living. All of the compositions of both volumes are within the capabilities of the ordinarily good performer and will be found most interesting whether used for purposes of recreation or instruction. We ask a critical examination and comparison with works of similar character.

Paper, with Cloth Back. Price, $1.00 Each. Half Cloth. Price, $1.25 Each.

BUSSLER'S PRACTICAL HARMONY
Newly Revised and Corrected Edition

Authorized Translation from the Third German Edition by N. GANS.

Without exception, the best and most practical work on this subject ever published. The author is a noted German theorist, whose works are known, used and held in high esteem at all the most prominent European colleges and conservatories. The demand for PRACTICAL HARMONY has been so great that three revised editions have been printed in Germany. Ours was translated from the third German edition, by a writer selected by the author. It is, as its title indicates, a thoroughly practical work, embracing the latest and most approved methods. It is simple, is illustrated by practical examples, and is eminently suited for self-instruction. Its price brings it within the reach of all.

For class instruction or for self instruction, Bussler's Practical Harmony is unequalled. It makes the study of harmony easy, rapid and entertaining.

Cloth Binding. Price, $1.00.

DICTIONARY OF MUSICAL TERMS

100 Pages. By STAINER and BARRETT. 6 x 9 Ins.

Compressed from the Imperial 8vo Edition, by K. M. ROSS.

We take pleasure in presenting a compressed edition of Stainer and Barrett's valuable work. Mr. K. M. Ross, in his preface says: "In reducing this book from the author's larger work, we have endeavored to omit only such terms as are not in general use, but have been compelled to eliminate an amount of details, in order to keep within reasonable limits. To the general public it is hoped that this edition will be found of practical utility."

"Dictionary of Musical Terms" is a neat and attractive book. It is offered at a nominal price with the hope that it may prove of incalculable value to those in need of a handy reference book.

Paper Binding. Price, 25 Cents.

BURROWES' PIANOFORTE PRIMER
Latest Improved Edition

Revised and Modernized by THOS. A'BECKET.

The fundamental principles which have given the work a world-wide reputation were not disturbed in the revision, but as the method of instruction has improved more rapidly than any other portion of the musical art, the sole aim of the editor was directed to bringing it up to the requirements of a progressive age.

There are other editions of this work—a number of them—but none are equal to the Latest Improved Edition, although all are sold at the same price.

Half Cloth Binding. Price, 25 Cents.

JOUSSE'S MUSICAL CATECHISM
Latest Improved Edition

Revised and Modernized by THOS. A'BECKET.

No one questions the merit of Jousse's Catechism—it is a universal favorite; but the progressive teacher demands text books and studies of the most advanced character. He is not satisfied with original editions, but wants the latest and best ideas. The possession of up-to-date editions saves time and insures more rapid and more substantial progress.

There are other editions of this work—a number of them—but none are equal to the Latest Improved Edition, although all are sold at the same price.

Paper Binding. Price, 20 Cents. Half Cloth Binding. Price, 30 Cents.

THE HARMONIZING OF MELODIES
A Text Book for Students and Teachers

By HENRY C. BANISTER.

The harmonizing of melodies, generally termed the knowledge of harmony, is one of the most practical applications of the knowledge of chords and their treatment. One may know the meaning of a number of words and still be unable to construct a sentence; he who lacks the ability to use chords in harmonizing a melody is in a similar position.

"Harmonizing of Melodies" will prove a most helpful aid to the student of harmony. It is extremely practical and abounds in examples which will readily be understood. No point has been overlooked, and all important subjects are treated at considerable length. Various methods of handling the same melody are shown, and valuable information as to the best choice, with reasons for the selection, are given. Many excellent hints as to taste and ornamentation, culled from the experience of the writer, are included.

Paper Binding Price, 50 Cents.

WICHTL'S YOUNG VIOLINIST

A new and magnificent edition of Wichtl's celebrated violin school, including the original 100 progressive exercises in the first position, through all intervals and keys, with a second violin part for the teacher, to which we have added "Pleyel's Celebrated Duets for Two Violins"—carefully fingered and bowed—and a splendid collection of Popular Duets for Violin and Piano.

Without exception ours is the best edition of this standard work. Compare it with others.

Half Cloth Binding. Price, $1.25.

Thirty Standard and Popular Operas
ARRANGED FOR VIOLIN AND PIANO

Violin and Piano, 200 Pages. By A. S. BOWMAN. Violin, 64 Pages.

In this superb collection the compiler has displayed taste of the most eclectic character, his selections comprising the various "schools" of music—French, German, Italian and English. In one compact volume, grand opera, opera *comique* and opera *bouffe* have contributed their choicest melodies. The list includes the great operatic successes of a generation ago and passes, in continuous order, to those of the present day; we have Rossini, Donizetti, Verdi, Wagner, Bizet and Mascagni, in close relation. In the arrangement that happy medium has been reached which presents just enough difficulty to interest the player without proving troublesome or overtaxing the powers of the average performer. Without exception, it is the most useful and entertaining work of its character in print.

"Thirty Standard and Popular Operas," for Violin and Piano, is a handsome volume of 200 pages, bound in half cloth. The same, for Violin, contains 64 pages and is neatly bound in paper. Both are printed from new plates, on a fine quality of music-book paper. No expense has been spared to make them perfect in every respect.

Violin and Piano, One Volume, Half Cloth Binding. Price, $1.25. Violin Alone, Paper Binding. Price, 75 Cents. Both Books, if ordered at the same time, $1.50.

POPULAR SELECTIONS FOR MANDOLIN AND PIANO

By JOHN J. EBERHARDT.

Mr. Eberhardt, well known as a composer and arranger of music for the mandolin, and for mandolin clubs, is also leader of one of the most popular clubs in the United States. We have, therefore, no hesitation in recommending anything that he may offer in this particular line.

"Popular Selections" is a large book (9½ x 12 inches) of 128 pages, printed from engraved plates, on fine quality toned music-book paper; it has an attractive cover.

Paper Binding. Price, 50 Cents. If Sent by Mail, 11 Cents Additional.

Sieber's 36 Elementary Vocalises
Op. 92-97 Inclusive

FOR SOPRANO, MEZZO SOPRANO, ALTO, TENOR, BARITONE AND BASS

With Introductory Notes by FREDERIC W. ROOT.

Sieber's 36 Eight Measure Vocalises, for all voices, are well known and appreciated by teachers. The composer had a double object in view and prepared them for use in the school, as well as for self-study at home. The book for each voice differs from the companion volumes, as the exercises were written with especial regard for the voice part under consideration. Each study is contained within eight bars—therefore do not become tedious—and are written with the *sol fa* syllables, also with an ingenious and effective set of vowel sounds designed by the composer, who is a teacher of European celebrity. All of his studies are melodious and interesting.

Our new edition is, in every respect, the finest in print. These studies have, heretofore, been published only in sheet music form, at $1 50 each. While our new edition is of much more convenient size and much handsomer in every way, it is sold for 50 cents per copy.

Mr. Frederic W. Root says: "The new edition of Sieber's Exercises are beautifully gotten out and I hope will be properly appreciated. I congratulate you upon the edition and hope to use it in my teaching for many a year."

Paper Binding. Price, 50c. Each.

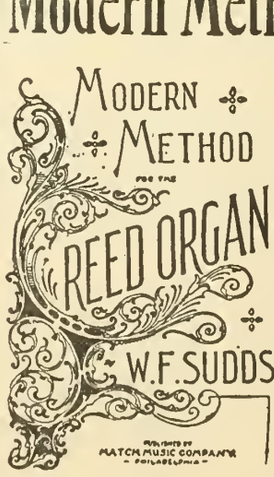
Modern Method for the Reed Organ



Embracing the Latest and Most Approved Systems Conducive to Rapid Progress and Artistic Interpretation; also Containing Various New and Important Features, such as Registration, Stop Nomenclature, Adaptation of Piano Music, etc., etc., Not to be Found in Any Other Work of the Kind

By W. F. SUDDS.

As the title implies, this method is modern, the newest ideas, and their practical application, governing its compilation. It treats all subjects in a terse and effective manner.

Among the many excellent features of the MODERN METHOD, we direct attention to the following:

It begins with Dictated Lessons.

The Rudiments are explained with remarkable clearness.

It is Carefully Graded.

It is sure to Awaken the Musical Instincts of the pupil without smothering the soul with too much drudgery.

The Fingering is the so-called Foreign, thus according with all the better class of modern musical publications for either Organ or Piano.

It contains a complete treatise on registration as applied to the modern Reed Organ; also full information and comparison in the matter of Stop Nomenclature.

It is the only work of the kind treating the subject of Adapting Piano Music to the Reed Organ.

Every variety of Touch is clearly set forth, accompanied by illustrations (drawn and engraved expressly for this work), showing the movements of finger, hand and arm.

The Scales are introduced in an effective manner.

The Explanation of the Minor Mode, another subject seldom touched upon in works of this character, is such that it can be readily understood.

The Musical Illustrations attending the various principles are taken from the best composers, of whom short sketches are given. This introduces a desirable amount of musical history.

The aim is to teach and illustrate one thing at a time. By a judious contrast of subjects, weariness is avoided.

Four Hand Pieces are introduced, not merely for recreation, but to promote steadiness and inspire confidence in the pupil. This plan has the approval of all great teachers.

A Copious and Carefully Compiled Pronouncing Dictionary—a matter of great importance to a work of this character—is included.

It is a work which cannot fail to interest both the practical teacher and the earnest pupil.

MODERN METHOD is the result of many years' experience as a teacher, by an editor who needs no introduction to the musical public. It is a book of 144 pages (10 x 13 inches), printed from entirely new plates and on the best grade of music-book paper.

Half Cloth Binding. Price, $1.00.

The "Hatch Edition"

Diminished reproduction of cover plate used on the "Hatch Edition."

All numbers included in this list have been carefully edited and annotated by leading American teachers, our corps of editors including: W. S. B. Mathews, Wm. H. Sherwood, Frank H. Tubbs, Frederic W. Root, R. S. Goldbeck, Jaroslaw de Zielinski, J. S. Van Cleve, Thos. a'Becket, Wilson G. Smith, H. C. Macdougall, Bernhard Listemann, etc. This important work has never been attempted by any other publisher. The engraving, paper, printing and binding are superior in every respect—each the best of its class. Regardless of the additional expense involved in the publication of annotated editions, prices have not been advanced, but are the same as those charged for ordinary reprints of the works included in this list.

Easy Pieces for Little Folks

IN THE FIRST GRADE.

The demand for meritorious pieces of the first grade of difficulty, always great, is constantly increasing. The publication of EASY PIECES FOR LITTLE FOLKS was undertaken in order to add to the supply of this material a choice collection, filled with a view of presenting the most extended variety in character, tone and touch. The most entertaining and best compositions have been taken from the works of famous instructors and writers for young players. All of the selections have been carefully fingered and revised, and many of them fully annotated—attention being called to vital points. The annotations act as a guide to the teacher and not only aid the pupil in properly rendering the author's thoughts, but make the teacher's work comparatively easy. Special attention is to its effectiveness.

The variety of styles, contained in this excellent work, are nearly all represented. Too much stress cannot be laid upon the importance of contrasting styles in the formation of correct musical taste, and this feature will be fully appreciated by all instructors having advanced ideas.

EASY PIECES FOR LITTLE FOLKS contains several old favorites, but with this exception the thirty-five pieces included in its contents are new. Each piece is of the first grade of difficulty and included on account of its merit. In making the selection, a great number of pieces were carefully and critically examined, and the editor included those which would, in his opinion, make the strongest and best collection. No expense has been spared in its preparation.

EASY PIECES FOR LITTLE FOLKS is issued in a manner which cannot fail to attract attention. It is printed from new plates, on a fine grade of music-book paper, and is neatly and attractively bound.

In order to show, at a glance, the musical worth of this book, we print the

Folio of Easy Pieces

IN THE FIRST GRADE

(Companion to "Easy Pieces for Little Folks").

"Easy Pieces for Little Folks" the most popular collection of first grade music ever published, has had an enormous and constantly increasing sale. Its success confirmed our opinion that a work of this character was needed—that teachers would welcome a first grade book containing instructive and recreation in well balanced proportions. Numerous inquiries for another collection of similar character led to the preparation and publication of a companion volume under above title.

Experience gained in the preparation of "Easy Pieces," and from teachers who have been constantly using it with first grade pupils, has enabled the editor to make a very strong book of the Folio, which contains thirty-four compositions for little folks. With a view of pleasing all tastes, and with the hope of encouraging young musicians to investigate and become familiar with every variety of form, extreme care was exercised in the selection of subjects. Experienced teachers will appreciate the editor's motive and will find it an extremely useful work.

All of the selections have been carefully revised and fingered, and many of them comprehensively annotated. We have no hesitation in saying that it is, in some respects, a decided improvement over its predecessor.

FOLIO OF EASY PIECES, printed from new plates on a fine grade of music-book paper, is neatly bound and cannot fail to attract attention.

To show, at a glance, the general contents of this excellent book, we print the

MELODIC SKETCHES

Twenty-four Characteristic Pieces in the Second Grade.

The initial number in our series of 50 cent books, published under the title: "Easy Pieces for Little Folks," met with instant success, conclusively proving that the demand for books of this character, covering the first and second (and probably the third) grades of difficulty, is practically unlimited. The ordinary 50 cent book is a "collection" made up by using old sheet music plates—good, bad and indifferent pieces—built upon no particular plan, and printed in book form solely for the purpose of providing a new use for worthless plates. EASY PIECES and MELODIC SKETCHES are BOOKS, the contents of which were selected, revised, fingered and annotated with a view of making the strongest and best collections of music in the first and second grades, regardless of expense. Both must have large and constantly increasing sales, because they deserve success; they are the best that can be produced.

MELODIC SKETCHES—the second book of the series—is an admirable collection designed for use in the second grade—contains nothing above or below that grade. It presents a series of contrasts—contrasts of character, contrasts of tone quality and touch—thereby combining beneficial instruction with recreation and amusement. It follows the latest educational methods—seeks to instruct by means of pleasing forms, which cannot fail to awaken in youthful minds a desire for knowledge.

The brilliant *tarantelle*, the martial *rondo*, the rippling brook, the Hungarian dance, the quiet song of love, the joyous village festival, the cheery hunting song and other characteristic sketches are all illustrated in this charming collection, which includes all styles and shades of color. It would be difficult to arrange a more pleasing book, or one better suited to the purpose.

MELODIC SKETCHES is printed from new plates, on a fine grade of music-book paper and is attractively bound. It cannot fail to interest both teacher and student.

To give an idea of its value, we print the

Nineteen Tone Pictures

IN THE THIRD GRADE.

The third in our new series of 50 cent books, is published under the above title. In announcing the publication of "Melodic Sketches"—the second of this series—we said "The demand for books of this character covering the first and second (and probably the third) grades of difficulty, is practically unlimited." It will be noticed that we had, at that time, more or less doubt regarding a third grade collection, but its reception has convinced us that NINETEEN TONE PICTURES will be fully as popular and salable as the other books of this series. The three collections are the strongest and best that have ever been published to sell for 50 cents per copy.

No expense has been spared to make them perfect in every respect. In the selection of the contents, the revision, fingering and annotations, paper, printing and binding, they are unequaled.

NINETEEN TONE PICTURES is a collection of third grade music—contains nothing above or below that grade. In its preparation, the editor has included pieces which give the greatest variety in style, and contrast of tone color, and he has prepared a volume which cannot fail to please the most critical teacher or student. To the player of third grade music, it offers all the requisites for acquiring a musical taste of pure and broad character. The examples selected are not of great length, it being deemed more valuable to include a greater number of selections, in order to permit a more extended variety of subjects. Classic forms have been purposely omitted, simply because a large library of this class of works is at the disposal of teachers and students but books containing good and graded compositions, illustrative of the romantic school, are not so readily obtainable. On that account, it is believed that this work will supply a want, that it will be welcomed by teachers and students.

Each piece included in this collection has been carefully revised and fingered; annotations have been added where needed or deemed advisable. In every particular it is a complete and perfect book.

NINETEEN TONE PICTURES is printed from new plates on a fine grade of music-book paper and is handsomely bound in paper. Mechanically it cannot be adversely criticised. We print the

FIFTEEN RECREATIONS

In the Fourth and Fifth Grades)

FOR ADVANCED PLAYERS

When pupils reach the fourth and fifth grades, they frequently have their own ideas regarding the selection of compositions for recreation. It is the editor's opinion that this excellent collection of selections will meet with favor, and his confidence is based upon the fact that as even the most capricious, will find among the contents a number of pieces that are entirely to their liking, both pleasing and pleasing.

Fifteen Recreations contains fifteen pieces at the same price, which is many and such a variety of grade and styles as in no collection of similar character can claim the same careful preparation. In these days of advanced thought and advanced methods, teachers want well fingered and annotated editions, and they also want a book with new material and plenty of variety indicated. And these demands are met in this book. Publishers who do not yield to them will fall behind.

With the facts before them, the editor aimed to make FIFTEEN RECREATIONS an absolutely perfect work, and in this he has succeeded. The selections are all recreative, in fairly contrasted grades of time and moods, and include material available for all occasions, whether public concert, private (such as Commencement) or for the home.

FIFTEEN RECREATIONS is printed from new plates on a fine grade of music-book paper, and is neatly bound, with an attractive cover.

To give an idea of the character and variety of the selections included in this collection we print the

Endless Amusement

A COLLECTION OF FOUR HAND MUSIC.

The fourth book in our 50 cent series is published under the above title. "Easy Pieces for Little Folks," "Melodic Sketches," and "Nineteen Tone Pictures"—the first three books in this series—cover a special field in first, second and third grades of piano solos, and they cover the field in a manner which has met with the hearty approval of teachers and students.

As a rule, collections of music in book form possess little or no educational value, no well-defined plan or principle can be detected in their make-up, they are collections—nothing more—and their sale depends either upon an attractive cover, or upon one or two popular pieces, included for the sole purpose of "carrying" a very ordinary selection of music.

Endless Amusement, and the other books in this series, do not belong to the class of publications described above. They have been carefully compiled and edited. The editor of the series, a well-known teacher, has exercised discrimination, judgment and great care in the selection of the subjects. Each piece possesses some feature of educational value. All of the selections have been carefully edited and fingered (many of them have been annotated), either by the editor or by other well known teachers. This is an important feature. No other 50 cent books can claim the same careful preparation.

A glance at the contents (printed below) will show that the editor has succeeded in making a strong collection. The seventeen attractive compositions are varied and useful—each piece presenting some desirable quality—the sole reason for its use. As every plate was engraved expressly for this work, the editor was not compelled to include anything which would not add strength and value. In other works, there was no necessity for "padding" as the subjects could be selected from the catalogues of all leading European publishers. They vary in difficulty from Grade I to medium Grade III, and the contents include works in which both parts are of equal difficulty; works in which one part (either *Primo* or *Secondo*) is easy while the other requires a more experienced performer. The compositions embrace many of the well-known musical forms. Each number is carefully fingered in both parts, and the annotations will prove helpful.

It cannot fail to please teachers and pupils, who will quickly find it a necessary adjunct for study and recreation. Without exception and regardless of cost, we believe that it has an equal; that no other collection of four hand music contains so much instructive and amusement value.

Endless Amusement is printed from new plates on a fine grade of music-book paper and is attractively covered and bound. It will attract attention; an examination will prove that a description cannot do it justice. We print the

JUST PUBLISHED

STRAY FANCIES

TWENTY-FIVE SELECTED COMPOSITIONS IN THE SECOND GRADE

Companion to "Melodic Sketches."

Frequent inquiries for another collection of second grade music, led to the publication of the volume under the title of "STRAY FANCIES." The characteristic features which have made FIFTY CENT BOOKS the most useful and most popular series of educational works ever published have been retained in the compilation of this number. An unusually large amount of valuable material was examined in making the selections, and neither expense nor labor was spared in the preparation of material and plates. Each subject has been carefully edited, fingered and annotated, and "STRAY FANCIES" is offered with the belief that its sale will be fully as large as that of its companion volume.

Paper Binding. Price, 50 Cents.

CHARACTERISTIC SKETCHES

A COLLECTION OF THIRD GRADE PIECES

(Companion to "Nineteen Tone Pictures.")

"*Nineteen Tone Pictures*" has had a large and constantly increasing sale, and we feel assured that its companion will prove as great a success. The editor has exercised great care and nice judgment in the selection of subjects, and for variety of style and contrast in tone color it is doubtful whether "CHARACTERISTIC SKETCHES" can be equaled by any other collection of third grade music—not excepting the collections which sell for twice the price. Each piece (it contains nineteen complete pieces) has been carefully edited, fingered and annotated, and the work cannot fail to prove useful for recreation, as well as for educational purposes. Uniform in style with the other books contained in this series.

Paper Binding. Price, 50 Cents.

GRADE 1.

The Corner Stone of the Course.

Table Exercises: Instructions from the Very Beginning, Most Carefully Graded; Difficulties Introduced in Logical Order. Interesting Exercises and Etudes; No Octaves. Exercises for Free Wrist; Major Scales—*Written*, but *not* Played.

GRADE 2.

Introduction of Scale Playing. Exercises for Passing Under the Thumb; Minor Scales Written; Beginning of Arpeggio Work (Broken Chords); Major and Minor Chords. Awakening of the Ideal of the Singing Touch; Interesting Etudes; Careful Grading of Difficulties.

The Preparatory Gymnastic Exercises, in Grade 1, are Practical and Helpful.

GRADE 3.

Velocity Assumes Some Importance; Attention Given to the Staccato, while Cantabile Playing Is Carried Along with Equal Care; Etudes Become More Like Pieces; Polyphonic Playing Introduced; Exercises for Weak Fingers in Each Hand.

GRADE 4.

Polyphonic Playing Carried Forward; Rhythmical Problems (Two Against Three) Introduced; Greater Richness in the Etudes; Etudes for Melody Playing, Rapid Runs, Trills, Arpeggi, Marked Rhythms, Extreme Agility, Fourth and Fifth Fingers. Interest Maintained Throughout the Grade.

GRADE 5.

Musical Material of Great Beauty; Etudes for Left Hand, Octaves, Polyphonic Playing, Staccato, Double Notes, Grand Arpeggi, Fourth and Fifth Fingers. In Singing Tone, Touch, Velocity and General Intelligence, Much More is Demanded of the Pupil.

GRADE 6.

Etudes for Extended Finger Touches, Staccato, Double Notes, Extreme Rapidity in Staccato and Runs. More Attention Given to Octaves; Pupil's Task Steadily Increasing in Difficulty—Greater Requirements in Regard to Touch, Interpretation, Color and Phrasing.

GRADE 7.

Pieces and Etudes by Saint-Saëns, Henselt, Kullak, Chopin, Mendelssohn, Raff, Alkan and others. These, Making Greater Demands upon the Pupil, advance his Technical Skill to the Highest Efficiency and Insure Ability to Interpret the Greatest Works for the Piano.

Several Opinions.

WILLIAM H. SHERWOOD: I am happy to state that the "National Graded Course" is remarkably adapted to the needs of teachers and students of music. Your claim in regard to the excellent grading of the studies is a thoroughly just one. I do not think that I have ever seen as good a succession of topics and exercises arranged as they are from the beginning on, using the best kind of materials from all sources and without any superfluous pages.

WILSON G. SMITH: I have been particularly impressed with the practical value and uniform excellence of the "National Graded Course."

AD. M. FOERS[illegible] National Graded Cou[illegible] to hold a foremost [illegible] the works of its [illegible] know of a better work [illegible] containing a more interesting and valuable selection of studies and pieces for the various peculiarities to be mastered. A list of desirable pieces that may be added to each part, if found necessary, is given in each grade, also definitions of all musical terms used in this work. The work is bound to find favor with thoughtful teachers and students.

O. R. SKINNER: I like the "National Graded Course" much better than any other work I am familiar with. The editing seems to be thoroughly well done, and the print leaves nothing to be desired.

(Want of space alone prevents printing the opinions of hundreds of well-known teachers in all sections of the United States and Canada.)

It Will Help YOU in Your Teaching.

Because

- It embodies the work of the most eminent pianists and teachers in America.
- It can be readily adapted to your "method," no matter what that may be.
- It is the LATEST work of the kind.
- ALL of the studies are carefully annotated, fingered and edited.
- It is the most carefully graded of any course before the public.
- It begins at the beginning of study.
- It saves the time that otherwise would be spent in laborious and often unrewarded search after that which is good and up-to-date.
- It covers the entire field of piano literature in an eminently practical, interesting and stimulating manner.
- Hundreds of your fellow teachers from all parts of the country have sent us, unsolicited, enthusiastic commendations of these very features.

This complete work (7 grades) together with a specially prepared pamphlet entitled: "Hints for Obtaining the Best Results in Using the National Graded Course." will be sent upon request, subject to examination and approval—without any obligation to purchase.

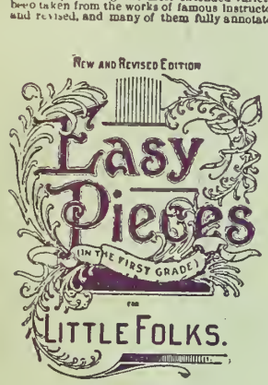
Easy Pieces for Little Folks

IN THE FIRST GRADE.

The demand for meritorious pieces of the first grade of difficulty, always great, is constantly increasing, and the preparation of EASY PIECES FOR LITTLE FOLKS was undertaken in order to add to the supply of this material a choice collection, selected with a view of presenting the most extended variety in character, tone and touch. The most entertaining and beneficial examples have been taken from the works of famous instructors and writers for young players. All of the selections have been carefully fingered and revised, and many of them fully annotated—attention being called to vital points. This annotations act as a monitor in the absence of the teacher and not only aid the pupil in properly interpreting the author's thoughts, but make the teacher's work comparatively easy—certainly adds to its effectiveness.



The variety of styles, contained in this excellent work, are neatly contrasted. Too much stress cannot be laid upon the importance of contrasting styles in the formation of correct musical taste, and this feature will be fully appreciated by all instructors having advanced ideas.

EASY PIECES FOR LITTLE FOLKS contains several old favorites, but with this exception the thirty-five pieces included in its contents are new. Each piece is of the first grade of difficulty and included on account of its merit. In making the selection a great number of pieces were carefully and critically examined, and the editor included those which would, in his opinion, make the strongest and best collection. No expense has been spared in its preparation.

EASY PIECES FOR LITTLE FOLKS is issued in a manner which cannot fail to attract attention. It is printed from new plates, on a fine grade of music-book paper, and is neatly and attractively bound.

In order to show, at a glance, the musical worth of this book, we print the

Folio of Easy Pieces

IN THE FIRST GRADE

(Companion to "Easy Pieces for Little Folks").

"Easy Pieces for Little Folks," the most popular collection of first grade music ever published, has had an enormous and constantly increas ng sale. Its success confirmed our opinion that a work of this character was needed—that teachers would welcome a first grade book combining instruction and recreation in well balanced proportions. Numerous inquiries for another collection of similar character led to the preparation and publication of a companion volume under above title.

Experience gained in the preparation of "Easy Pieces," and from teachers who have been constantly using it with first grade pupils, has enabled this editor to make a very strong book of the FOLIO, which contains thirty-four compositions for little folks. With a view of pleasing all tastes, and with the hope of encouraging young musicians to investigate and become familiar with every variety of form, extreme care was exercised in the selection of subjects. Experienced teachers will appreciate the editor's motive and will find it an extremely useful work.

All of the selections have been carefully revised and fingered, and many of them comprehensively annotated. We have no hesitation in saying that it is, in some respects, a decided improvement over its predecessor.

FOLIO OF EASY PIECES, printed from new plates on a fine grade of music-book paper, is neatly bound and cannot fail to attract attention.

To show, at a glance, the ground covered by this excellent book, we print the

MELODIC SKETCHES

Twenty-four Characteristic Pieces in the Second Grade.

The initial number in our series of 50 cent books, published under the title: "Easy Pieces for Little Folks," met with instant success, conclusively proving that the demand for books of this character, covering the first and Second (and probably the third) grades of difficulty, is practically unlimited. The ordinary 50 cent book is a "collection" made up by using old sheet music plates—good, bad and indifferent pieces—built upon no particular plan, and printed in book form solely for the purpose of providing a new use for worthless plates. EASY PIECES and MELODIC SKETCHES are BOOKS, the contents of which were selected, revised, fingered and annotated with a view of making the strongest and best collections of music in the first and second grades, regardless of expense. Both must have large and constantly increasing sales, because they deserve success; they are the best that can be produced.

MELODIC SKETCHES—the second book of the series—is an admirable collection designed for use in the second grade—contains nothing above or below that grade. It presents a series of contrasts—contrasts of character, contrasts of tone quality and touch—thereby combining beneficial instruction with recreation and amusement. It follows the latest educational methods—seeks to instruct by means of pleasing forms, which cannot fail to awaken in youthful minds a love for knowledge.

The brilliant *tarantelle*, the martial *rondo*, the rippling brook, the Hungarian dance, the quiet song of love, the joyous village festival, the cheery hunting song and other characteristic sketches are all illustrated in this charming collection, which includes all styles and shades of color. It would be difficult to arrange a more pleasing book, or one better suited to the purpose.

MELODIC SKETCHES is printed from new plates, on a fine grade of music-book paper and is attractively bound. It cannot fail to interest both teacher and student.

To give an idea of its value, we print the

CONTENTS.

Alpine (The) Hunter	Wenzel	Moonlit Ocean—Romanza	Holst
Brook (The) in the Wood	Wenzel	On the Rhine	Behr
Chanson d'Enfant	Guilmant	Our Loved One—Tone Piece, Op. 29	Ganschale

Nineteen Tone Pictures

IN THE THIRD GRADE.

The third in our new series of 50 cent books, is published under the above title. In announcing the publication of "Melodic Sketches"—the second of this series—we said "The demand for books of this character, covering the first and second (and probably the third) grades of difficulty, is practically unlimited." It will be noticed that we had, at that time, more or less doubt regarding a third grade collection, but its reception has convinced us that NINETEEN TONE PICTURES will be fully as popular and salable as the other books of this series. The three collections are the strongest and best that have ever been published to sell for 50 cents per copy.

No expense has been spared to make them perfect in every respect. In the selection of the contents, the revision, fingering and annotations, paper, printing and binding, they are unequaled.

NINETEEN TONE PICTURES is a collection of third grade music—contains nothing above or below that grade. In its preparation, the editor has included pieces which give the greatest variety in style, and contrast of tone color, and he has prepared a volume which cannot fail to please the most critical teacher or student. To the player of third grade music, it offers all the requisites for acquiring a musical taste of pure and broad character. The examples selected are not of great length, it being deemed more valuable to include a greater number of selections, in order to permit a more extended variety of subjects. Classic forms have been purposely omitted, simply because a large library of this class of works is at the disposal of teachers and students, but books containing good and graded compositions, illustrative of the romantic school, are not as readily obtainable. On that account, it is believed that this work will supply a want; that it will be welcomed by teachers and students.

Each piece included in this collection has been carefully revised and fingered; annotations have been added where needed or deemed advisable. In every particular it is a complete and perfect book.

NINETEEN TONE PICTURES is printed from new plates on a fine grade of music-book paper and is handsomely bound in paper. Mechanically it cannot be adversely criticised. We print the

CONTENTS.

At the Twilight Hour—Nocturne, Op. 17	Williams	Go to Victory—March Triumphal	Sheldon
Danse Pittoresque—Scene de Ballet, Op. 14	Smith	Other Days—Cavatte, Op 317	Cohen
Fleeting Joys—Scherzino, Op. 9	Hendrick	Silver Spring, Op. 208	Fourhi

Bound in Paper Price. 50 Cents.

FIFTEEN RECREATIONS

(In the Fourth and Fifth Grades)

FOR ADVANCED PLAYERS

When pupils reach the fourth and fifth grades, they frequently have their own ideas regarding the selection of compositions. Nevertheless the editor is confident that this excellent collection of solos will meet with favor, and his confidence is based upon the fact that all, even the most capricious, will find among the contents a number of pieces that cannot fail to prove both valuable and pleasing.

No collection of similar size, selling at the same price, contains so many and such a variety of Grades IV and V pieces, and no collection of similar character can claim the same careful preparation. In these days of advanced thought and advanced methods, teachers demand revised, fingered and annotated editions, and they also demand editions with exact and proper phrasing clearly indicated. And these demands are so strong that the issues of publishers who do not yield to them meet with scant approval.

With these facts in mind, the editor aimed to make FIFTEEN RECREATIONS an absolutely perfect work, and it is our belief that he has succeeded.

The selections are admirable, admirably contrasted in styles and moods, and include material available for all occasions whether public, semi-private (such as Commencements), or the home.

FIFTEEN RECREATIONS is printed from new plates on a fine grade of music-book paper, and is neatly bound, with an attractive cover.

To give an idea of the character and variety of the selections included in this collection, we print the

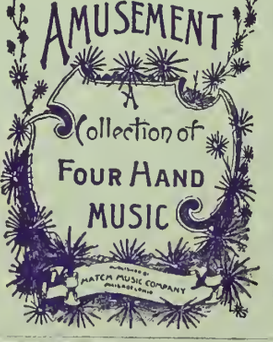
Endless Amusement

A COLLECTION OF FOUR HAND MUSIC.

The fourth book in our 50 cent series is published under the above title. "Easy Pieces for Little Folks" "Melodic Sketches," and "Nineteen Tone Pictures"—the first three books in this series—cover a special field in first, second and third grades of piano solos, and they cover the field in a manner which has met with the hearty approval of teachers and students.

As a rule, collections of music in book form possess little or no educational value; no well-defined plan or principle can be detected in their make-up, they are collections—nothing more—and their sale depends either upon an attractive cover, or upon one or two popular pieces, included for the sole purpose of "carrying" a very ordinary selection of music.

Endless Amusement, and the other books in this series, do not belong to the class of publications described above. They have been carefully compiled and edited. The editor of the series, a well-known teacher, has exercised discriminating judgment and great care in the selection of the subjects. Each piece possesses some feature of educational value. All of the selections have been carefully edited and fingered (many of them have been annotated), either by the editor or by other well-known teachers. This is an important feature. No other 50 cent books can claim the same careful preparation.



A glance at the contents (printed below) will show that the editor has succeeded in making a strong collection. The seventeen attractive compositions are varied and useful—each piece presenting some desirable quality—the sole reason for its use. As every piece was engraved expressly for this work, the editor was not compelled to include anything which would not add strength and value; in other words, there was no necessity for "padding" when subjects could be selected from the catalogues of all leading European publishers. They vary in difficulty from Grade I to medium Grade III, and the contents include: works in which both parts are of equal difficulty; works in which one part (either *Primo* or *Secondo*) is easy, while the other requires a more experienced performer. The compositions embrace most of the well-known musical forms. Each number is carefully fingered *in both parts*; the annotations will prove helpful.

It cannot fail to please teachers and pupils, who will quickly find it a necessary adjunct for study and recreation. Without exception and regardless of cost, we believe that it has no equal; that no other collection of four hand music contains so much instructive and amusement value.

Endless Amusement is printed from new plates on a fine grade of music-book paper and is attractively covered and bound. It will attract attention; an examination will prove that a description cannot do it justice. We print the

JUST PUBLISHED

STRAY FANCIES

TWENTY-FIVE SELECTED COMPOSITIONS IN THE SECOND GRADE

(Companion to "Melodic Sketches.")

Frequent inquiries for another collection of second grade music, led to the publication of this volume under the title of "STRAY FANCIES." The characteristic features which have made our FIFTY CENT BOOKS the most useful and most popular series of educational works ever published, have been retained in the compilation of this number. An unusually large amount of valuable material was examined in making the selections, and neither expense nor labor was spared in the preparation of material and plates. Each subject has been carefully edited, fingered and annotated, and "STRAY FANCIES" is offered with the belief that its sale will be fully as large as that of its companion volume.

Paper Binding. Price, 50 Cents.

CHARACTERISTIC SKETCHES

A COLLECTION OF THIRD GRADE PIECES

(Companion to "Nineteen Tone Pictures.")

"Nineteen Tone Pictures" has had a large and constantly increasing sale, and we feel assured that its companion will prove as great a success. The editor has exercised great care and nice judgment in the selection of subjects, and for variety of style and contrast in tone color, it is doubtful whether "CHARACTERISTIC SKETCHES" can be equaled by any other collection of third grade music—not excepting the collections which sell for twice the price. Each piece (it contains nineteen complete pieces) has been carefully edited, fingered and annotated, and the work cannot fail to prove useful for recreation, as well as for educational purposes. Uniform in style with the other books contained in this series.

Paper Binding. Price, 50 Cents.

LIMITED TO FIFTY MEMBERS.

We take pleasure in announcing the formation of a **CHRISTMAS DICTIONARY CLUB**, limited to 50 members, and formed for the purpose of distributing 50 sets of "**GROVE'S DICTIONARY OF MUSIC AND MUSICIANS**" at a reduction of 30 per cent. from the regular price and upon easy monthly payments extending over a period of one year.

GROVE'S
Dictionary of Music and Musicians

Latest Edition. Five Large Volumes, Including Index. Bound in Full Cloth, with Gilt Top.

Every teacher and earnest student of music should possess a library of the choicest musical literature, and as the foundation or basis of such a collection must consist of standard works of reference, it will of necessity include "**GROVE'S DICTIONARY OF MUSIC AND MUSICIANS**," because it is the only work to be found in musical literature that does for the studeut of music what the many cyclopedias do for the literary worker. For a long time the musician was compelled to gather facts and items of historical knowledge from many sources. Biography of the masters, as well as of many lesser lights who uevertheless did much to advance musical progress, and of whom it is well to have some information, could be had only from widely scattered volumes. A dictionary of musical progress was really unkuown. These important and annoyiug wants are supplied by this work. Biography, definition of musical terms, explanation of Form, origin, structure and development of instruments, History and many other classes of valuable information are contained in it. A complete and specially prepared Index (which is included in our club offer) greatly facilitates the use of the work. What its possession means to the teacher can be readily understood. It is, beyond question,

The Only Complete Encyclopædia of Music in the English Language.

"**GROVE'S DICTIONARY**," in its completed form, represents years of labor, and the expenditure of a very large sum of money in the preparation of the plates. It should have had an enormous sale. While its sale no doubt has been, and is entirely satisfactory to the publishers, nevertheless we believe that if its price had been fixed at $17.50, instead of $25 00, their profits would have been greater. At the lower price the sales would have been quadrupled—no matter how large they have been. Thousands of teachers and students who could and would pay $17 50, either cannot afford to or will not pay $25.00. They have endeavored to get along, without the work, all the while feeling the limitation its absence placed upon their resources. In order to aid 50 teachers and students in procuring a complete set of the latest editiou, we offer that number at a reduced price and on easy monthly payments (fully explained below) to the first 50 who join the

Christmas Dictionary Club

As THE MUSICIAN is devoted to the Educational Interests of Music, its various departments, conducted by experts, contain a great number of articles in which constant reference is, of necessity, made to standard works. Among these works, "**GROVE'S DICTIONARY**" occupies a very prominent posttion, and while no department of our journal makes the purchase of this or any other work compulsory (on the contrary, all departments are conducted upon a basis designed to cut off expeuse as far as possible), nevertheless the general value of the work and its great usefulness commend it to all progressive teachers and earnest students. In order to enable our customers, includiug subscribers and readers of THE MUSICIAN, to provide themselves with a set of "**GROVE'S DICTIONARY**" at a cost and upon terms so advantageous as to merit their attention, we concluded to form a **CHRISTMAS DICTIONARY CLUB**. Hence the following offer, which is

LIMITED TO 50 MEMBERS.

The limit has been fixed at 50, because we cannot afford to sell a greater number of sets at the Club Price, upon the terms and conditions explained below. We are not the publishers of "**GROVE'S DICTIONARY**," and the cost of the work and its handling barely allows the return of our investment, to say nothing of the expense of advertising the distribution. Those who take prompt advantage of this exceptional offer can procure the complete set of books—latest edition—at a greatly reduced price and upon terms of payment which limit the outlay to *less than five cents a day*. Remember that this offer applies to only

50 Sets, at 70 Per Cent. of the Regular Price.

(REGULAR PRICE, $25.00. CLUB PRICE, $17.50.)

Both price and terms of payment are the most liberal that have ever been made on this Standard Reference Library. *Less than five cents a day* for one year will secure its possession. As a Christmas gift to teacher or student of music, uothing could be more appropriate or more useful. But as the Club is positively limited to 50, the importance of joining at the earliest possible moment, in order to secure membership, is apparent. The initial payment of $1.55 will be promptly returned to those whose applications are received after the membership is completed. The full amount ($17.50) is

PAYABLE IN ONE YEAR---$1.45 PER MONTH.

(Less than 5 Cents a Day.)

How to Join the Club. Send **$1.55** with letter stating that it is first payment for a set of "**GROVE'S DICTIONARY OF MUSIC AND MUSICIANS**," and for membership to the **CHRISTMAS DICTIONARY CLUB**. Each membership will be acknowledged upon receipt, and the books will be shipped by express or freight, as ordered. In the absence of specific shipping instructions they will be shipped by express. The other payments will extend over a period of **twelve months**, divided into **eleven** payments of **$1.45 each**, the first being due and payable **one month** after shipment, and the others at an interval of one month each.

Please Remember

That this offer is limited to a Club of 50.
That the Club will be completed upon receipt of the 50th order.
That each set contains five volumes, including Index.
That payments are to be made as follows: $1.55 with order; $1.45 per month, for eleven months.
That you have the use of the entire set of books for a full year before the last payment falls due.
That it is to your interest to join the Club at once, so that your order may be received before its completion.

Hatch Music Company, Eighth and Locust Streets, PHILADELPHIA, PA.

To join the CHRISTMAS DICTIONARY CLUB, carefully fill out this blank, and mail it to the Hatch Music Company.

Hatch Music Company, 236 S. 8th St., Philadelphia, Pa. *Date.* *1901.*

Please forward one complete set of "**GROVE'S DICTIONARY OF MUSIC AND MUSICIANS.**" I agree to receive and pay for same a total of Seventeen and $\frac{45}{100}$ Dollars, in the following manner, viz.: One and $\frac{45}{100}$ Dollars with this agreement, and each and every month after shipment of books, the sum of One and $\frac{45}{100}$ Dollars, remitting same to the **Hatch Music Company** by bank draft, P. O. money order, express order or registered letter, until the entire amount is paid.

The title and ownership of said Dictionary shall not vest in me, but books delivered shall be held by me as the property of Hatch Music Company until paid for in full. In event of my failure to pay any one of said monthly payments for 30 days after the same has become due, I hereby agree, if so requested by the said Hatch Music Company, to carefully pack and ship the said set of books to the said Hatch Music Company in good condition and in such manner as the said Hatch Music Company may direct, or at its option, the said Hatch Music Company may take, or cause to be taken, the set of "Grove's Dictionary of Music," either with or without process of law, it being expressly understood and agreed that the money already paid shall be forfeited for the use and wear of said books. All transportation charges to be paid by me.

NOTE.—Unless otherwise ordered, books will be shipped by Express. If Express Office differs from the Post Office given below, please give full shipping instructions.

Club Members with whom we have no regular account will please give full name and address of two refereuces. As references we prefer business houses, in your own or other cities, with whom you have accounts. Careful attention to this request will avoid unnecessary delay in acceptance of membership.

MUSIC PUBLISHING

WRITE US FOR FULL PARTICULARS.

We have every facility for the prompt and satisfactory publication of any musical work—no matter whether it is a piece of sheet music or a large book. Our facilities are unsurpassed and there is no kind or style of work in our line which we cannot do in the very best manner at the least possible cost.

Our printing is all that could be desired by the most critical and is equal, in every respect, to the finest European press-work.

HATCH MUSIC COMPANY, PHILADELPHIA.

A SELECTED LIST OF FIRST GRADE MUSIC AND BOOKS

SHEET MUSIC.

BEHR, F.

Op. 503, No. 30. Au Revoir (Auf Wiedersehn) 20
A tender little melody, which sings out its good-bye hopefully. Requires a loose, quiet wrist and singing legato finger touch.

Op. 508, No. 18. Bird's Message (Vögleins Botschaft) 20
This makes somewhat greater demands on the player. Its bird imitation makes use of the added lines, which must be read quickly. A light wrist and flexible fingers are needed.

Op. 426, No. 1. Congratulation (Glückwunsch) 20
These congratulations are hearty and the piece should be played sturdily, but with no tendency toward harduess of touch. It is a useful teaching piece.

Ethel Polka 20
A sprightly little dance, bright in melody and easy in accompaniment. A good study in wrist touch and staccato.

Op. 575, No. 23. Farewell to Home (Abschied von der Heimath) 20
Somewhat similar in nature to Au Revoir, but more difficult. It is very pretty and sure to please the pupil.

Op. 575, No. 1. French Child's Song (Französisches Kinderliedchen) 20
A quite easy first piece with a good tune to it. It is entirely in position.

Grandpapa's Dance (Grossvater's Tänzchen) . 20
Grandpapa must be a jolly old fellow, for his dance is quite gay. Another good exercise in wrist staccato.

Op. 575, No. 2. In the Month of May (Im Mai) 20
A song of spring, bright and tuneful. It is a good first piece.

Op. 426, No. 5. Italian Song (Italienisches Lied) 20
This requires more musical perception from the pupil and, given at proper time, will be a good study in phrasing. The reiterated chords in left hand must be watched.

Kindergarten Waltz 20
A very graceful waltz, not hard to play, but pleasing. Should be carefully phrased.

Night in May (Mainacht) 20
This is a splendid piece for teaching purposes. It is clear in form, interesting in treatment and attractive in melody and harmony.

Night Patrol (Nächtliche Runde) 20
A good staccato is demanded in this piece. Its martial character is pronounced. Bright and interesting.

Parade of the Guard (Wachtparade) 20
Somewhat similar to the preceding, but more lively. Partakes more of the character of the two-step. We can easily imagine the guard swinging by at double quick.

Op. 426, No. 3. Star Greeting (Sternengruss) . 20
Of quite different style. Phrases are well marked and a smooth, singing legato is necessary in both hands.

BIEHL, A.

Op. 53, No. 5. Child's Prayer (Kinder Bitte) . 20
Short but very good. Excellent for developing the finer touches of expression.

Op. 52, No. 14. The Clock (Die Wanduhr) . . 20
Very characteristic. The left hand adds much to the effect and should be well played.

Op. 53, No. 2. Dance on the Lawn (Tänzchen im Freien) 20
This dance shows the frisky disposition of the dancers. It is not difficult, but pleasing.

Op. 53, No. 7. Garland Weaving (Beim Kränzewinden) 20
A beautiful little piece. The second part makes some demands upon the left hand. Well worth study.

Op. 52, No. 6. How Hans and Gretchen Dance (Wie Hänschen und Gretchen tanzen) 20
Spirited and affords good wrist training.

Op. 52, No. 13. Joyous Days of Youth (Fröhliche Kinderzeit) 20
A sprightly figure in the melody and a crisp, clean chord accompaniment are the features of this piece.

Op. 52, No. 5. Little Flatterer (Schmeichelkätzchen) 20
Simple melody for right hand, with a contrapuntal accompaniment for the left. Excellent teaching piece.

Op. 52, No. 15. Little Soldiers' March (Kleiner Soldaten Marsch) 20
An attractive study in chord playing in left hand, with a good tune in the right. Not hard, but pleasing.

Op. 52, No. 10. Picnic Dance 20
Exemplifies its name. A jolly dance, such as happy picnicers would indulge in. Good teaching piece.

Op. 53, No. 1. Wild Rider (Der Wilde Reiter) 20
A good descriptive piece, requiring firm tone and light wrists and arms. Good study.

BOLCK, O.

Op. 68, No. 1. Weaving Garlands (Beim Kränzewinden) 20
A very tuneful melody with broken chord accompaniment. Attractive without undue difficulty.

ENGELMANN, H.

Op. 408, No. 2. Curly Locks Polka 25
A taking little dance piece. Sure to please the young player.

Op. 408, No. 4. Humpty Dumpty Schottische 25
A brisk Schottische. Like all of Engelmann's pieces, it is full of melody and interestingly harmonized.

Op. 408, No. 6. Jack and Jill Galop. 25
Somewhat similar to No. 2. Bright and pleasing.

Op. 422, No. 3. King's Delight Mazurka . . . 25
A characteristic Mazurka by same author. Good practice in phrasing. Not difficult.

Op. 408, No. 3. Little Bo-Peep Mazurka . . . 25
Very graceful. Contains excellent practice in staccato finger work.

Op. 408, No. 5. Little Boy Blue March 25
A good march. Excellent practice in wrist touch. Sure to please.

Op. 408, No. 1. Mother Hubbard Waltz . . . 25
A graceful waltz, no hard places to discourage the young player.

Op. 422, No. 5. Old King Cole's March . . . 25
A bright piece, good for teaching purposes and sure to interest the pupil.

Op. 422, No 4 Pipe and Bowl Schottische . . 25
Useful to the teacher. Its flowing melody and taking rhythm will make it interesting to the pupil.

Op. 422, No. 1 Start Up Waltz 25
Sure to start the pupil to practicing it with vigor. It is easy, bright and jolly.

Op. 422, No. 2. Tweedle Dee, Tweedle Dee Polka 25
Brisk in movement; easy to understand and effective when well played.

Op. 422, No. 6. Wind Up Galop 25
Another of the same sort. This set of easy teaching pieces by Engelmann is certain to prove useful.

GAEL, H. VAN

Op 54. Coquette (La Viennoise) Valse 25
Well named. The music is coquettish.. Good training for acquiring a light hand and arm.

Op. 53. Guitars and Mandolins (Guitares et Mandolines) Serenade 25
No sadness in this Serenade. The serenaders must be full of joy, if the music tells its story truly.

Op. 52. Little Father (Le Petit Pâtre) Pastoral 25
Rather more serious in tone than the preceding and, consequently, good to use in developing taste. Excellent chord practice in left hand.

Op. 56. Little Hunters (Les Petits Chasseurs) March 25
An attractive and useful teaching piece.

Op. 55. Skaters (Les Glissades) Mazurka . . . 25
The sparkle of Winter weather is in it. Fresh and full of life, it brings thoughts of fun on the ice.

Op. 51. Voice of the Heart (La Voix du Coeur) Song Without Words 25
Beautiful little song without words. A singing touch is needed to bring out its melody. Well worth using.

GOERDELER, R.

Lullaby 25
A beautiful melody which gives opportunity for cultivating a singing tone. Very interesting.

Merry-Go-Round 25
A joyous little piece. Phrases are well defined, and will aid the pupil in understanding simple form.

Mill Wheel 25
Characteristic little piece, full of go and vigor.

Scotch Bag-Pipe 25
The drone of the bag-pipe is well brought out in the monotonous time of this piece. Splendid practice and worth frequent use.

Sweet Evelyn Waltz 25
An attractive little waltz of no particular difficulty. Melody of first part is in left hand. Effect of tie is good.

GURLITT, C.

Op. 101, No. 5. By the Spring (An der Quelle) 20
Like all of Gurlitt's pieces, this is very musical. It affords opportunity for the practice of phrasing.

Op. 101, No. 7. Lament (Klage) 20
A quaint, mournful little melody. Valuable outside of technical reasons for developing appreciation.

Op. 130, No. 6. March of the Tin Soldiers (Zinnsoldaten Marsch) 20
Melody is given out by right hand and is then repeated in left. In six-eight measure. Very good.

Op 101, No 2. Morning Prayer (Morgengebet) 20
Good study in legato chord playing. This piece affords practice needed by every young pupil.

Op. 101, No. 10. Song Without Words 20
Another musical song. Singing legato and phrasing are essential.

HELLER, M. P.

Op. 6, No 2. Festal March 20
The festal spirit is here. A good, strong march.

Op. 6, No. 1. Going to Church (Zur Kirche) . 20
The chimes and the organ are heard in this piece. Decidedly interesting to young players and sure to do them good.

Op. 6, No. 3. On the Playground (Auf dem Spielplatz) 20
A good study piece. The slurs give practice in lifting hand after binding two notes. A contrasted legato melody in second part should be carefully played.

HILLER, P.

Op. 66, No. 2. Grandmother's Dream 20
An excellent study piece. Its subjects are well contrasted and the work is evenly distributed.

Op. 66, No. 4 Little Rider 20
Splendid little piece. Its steady movement and suggestive rhythm are very taking. Splendid staccato practice.

Op. 66, No. 3. Lonely Rose 20
In the minor. The loneliness of the flower is told quite well. A singing legato and a chance for expression are its distinguishing features.

HOMANN, W.

Op. 10, No. 1. Festival Sounds (Festklänge) Rondino 25
A slow introduction leads into the jolly movement of the festival sounds. Some good exercise in run playing.

Op. 10, No. 2. Hunter's Song (Jägerlied) Rondino 25
These hunters start out in a bold, cheerful frame of mind, and keep it up to the end. A stirring piece in 6-8 measure.

KÖHLER, L.

Op. 210, No. 4. At Home (Am Gemüthlichen Plätzchen) 20
Quiet contentment characterizes this little piece.

Op. 210, No. 6. Cradle Song (Wiegenliedchen) 20
Quiet little cradle song, teaching finger control and singing tone. Very pretty.

Op. 210, No. 7. Soldier's Song (Soldatenlied) 20
A piece in which the martial spirit will be found. It is a good march.

KÜGELE, R.

Doll's Dance (Puppentanz) 20
There must be lively dolls, for this dance is full of go. Beside being a good teaching piece, it is sure to please.

LANGE, G.

Op 249, No. 1. In Rank and File 35
Erect and vigorous these soldiers march by. Occasionally the roll of the drum is heard. Not difficult.

LICHNER, H.

Op. 78, No 4 First Ball. Rondino 35
Some good finger work can be gotten from this piece, which is tuneful and gay. A crisp staccato is necessary also.

Op. 31, No. 2. Forest Flowers Waltz 20
Very graceful waltz, full of melody. An excellent and instructive recreation.

Op. 57, No. 3. Twinkling Feet Waltz 20
Simple and free from catchy places, this waltz is nevertheless very attractive. If played daintily, it is very characteristic.

MERKEL, G.

Op 31, No. 1. Children's March (Kindermarsch) 20
Short, but it is full of music. It should be played with decision.

PRIDHAM, J.

Fairies' Waltz 30
Its two subjects require somewhat different treatment. The first, a quiet hand and firm finger touch. The second, a light wrist touch changing to a finger touch for the runs. Very bright and pleasing.

REINECKE, C.

Op. 107, No. 12. Children and Cuckoo (Kinder und Kukuk) 20
The children's song and the call of the cuckoo are heard here. The children at times break off their song to imitate the bird. Instructive as well as pleasing.

RUMMEL, J.

March 20
A good example of this form. Bright and effective.

SARTORIO, A.

Op. 229, No. 7. Dreams of Youth (Jugendträume). Polka Mazurka 20
Good practice in dotted-eighth and sixteenth rhythm, and in double notes. Tuneful and without hard places.

Op. 229, No. 2. Italian Song (Italienisches Liedchen). Barcarolle 20
A singing melody with a broken chord accompaniment. Excellent practice in phrasing.

Op. 229, No. 13. Leisure Hour (In stiller Stunde) 20
This beautiful piece will repay study. While not difficult it can be made very effective.

Op. 229, No. 3 Military March (Militair Marsch) 20
A good march somewhat more difficult than those before mentioned. Well controlled arms and hands are needed. Results will be good.

Op. 229, No. 1. Under the Linden (Unter den Linden) Ländler 20
Splendid finger study. Bright and with brisk moving melody, it needs fluent playing.

SCHUMANN, R.

Op. 68, No. 10. Happy Peasant (Fröhlicher Landmann) 20
Too well known to need comment. With it is a Hunting Song, which is an excellent companion.

Op. 68, No. 2. Soldiers' March (Soldatenmarsch) 20
This well-known gem needs no comment. It is both useful and pleasing.

THOMÉ, F.

Melodie 20
A very beautiful piece. Its exquisite melody should be played with a full singing legato. The first bass note of each measure is staccato, making a peculiarly effective accompaniment.

WOLFF, G. T.

Op. 25, No. 7. Little Cradle Song (Wiegenliedchen) 20
A cradle song requiring thorough mastery, which will produce good effects. Well written and very pretty.

Op. 25, No. 11. Mill by the Brook (Mühle am Bache) 20
Brisk and characteristic. The clatter of the mill is given first with the right, then with the left hand.

WOOLER, A.

Golden Sunset 25
Especially useful for the running work in left hand. Very pleasing.

BOOKS.

Easy Pieces for Little Folks . . Paper Binding 50
The most popular collection of Grade I music ever published in book form.

Folio of Easy Pieces in the First Grade . . . . . Paper Binding 50
Companion to above. Contains thirty-four complete pieces. An extremely useful and pleasing collection.

A SELECTED LIST OF SECOND GRADE MUSIC AND BOOKS

SHEET MUSIC.

BAUMFELDER, F.

Op. 215 No. 19 Harlequin (Der Hanswurst) . 20
Very bright piece, well treated and clear in form. The little figure of sixteenth notes will attract. Good study in staccato.

BEAUMONT, P.

At the Twilight Hour 30
Of quite different character. A rather broad melody calls for a singing touch. The wide accompaniment in left hand will require care. Very pretty.

Spring's Delight 30
This must refer to the pleasant May days, for it is full of cheer and sunshine. Good for teaching and parlor playing.

Twinkling Stars 30
These stars twinkle very melodiously. A graceful melody without special difficulty characterizes this composition.

BEHR, F.

Song of the Elves (Elfengesang). Melodie . . 25
Graceful melody in $^3/_4$ measure. Affords excellent practice in passage work. Not hard and very pleasing.

BIEHL, A.

Op. 53, No. 3. Gretchen and Her Doll (Gretchen und ihre Puppe) 20
Another bright piece, full of tune and presenting no hard spots. Considerable staccato in both hands.

Rondo Militaire 35
A martial composition that will set the feet to marching. Needs spirit in its playing.

Op. 52, No. 18. Rope Dancer at the Fair (Die Seiltänzer auf dem Jahrmarkt) 20
An excellent finger study, with chords in left hand. Short and interesting.

BIELFELD, A.

Bygone Days. Menuet 20
The days that are passed are not remembered in sadness, for this is a cheery little dance in $^3/_4$ measure. Some good practice for left hand.

BOHM, C.

Little Pleasantries (Petite Plaisanterie). Morceau 35
Good teaching piece; pleasing melody and full of sprightliness.

BOLCK, O.

Op. 68, No. 5. Roguishness (Schabernack) . . 20
One would hardly look for roguishness to be expressed in the minor, but it is done—and well done—in this little piece. A nice staccato scale for left hand.

BURGMÜLLER, F.

Hunting Song (Kreutzer) 20
A good teaching piece, and pretty withal. Arrangement of a scene from the opera, "A Night in Granada."

DOLES, R.

Op. 10. Little Waltz (Une Petite Valse) . . . 20
A very excellent teaching piece. Contains opportunities for phrasing, finger and hand development. Well worth playing.

EILENBERG, R.

Op. 46. No. 3. Come to the Dance (Komm' zum Tanz) Schottische 20
This invitation to the dance is alluring. Bright in its subjects and full of "go," it is sure to please.

Op. 210, No. 1. With Drums and Colors Flying (Mit Trommeln und Fahnen). March . . . 30
Showy little march. Not difficult and responding well to careful practice.

ENGELMANN, H.

Op 308 No. 1. Berceuse 20
A real bit of inspiration. A beautiful theme is interwoven between the two hands. A fine study in expressive playing.

Op. 430, No. 5. Jolly Parting. Scherzo 25
These people must have parted in good humor, for the scherzo is a gem. Lightness of touch and nimbleness of finger are needed. Results will be good.

Op 430, No. 2 Out for a Day's Sport. Rondo 25
Excellent teaching piece. Full of all that attracts the young player, and can be made the means of material advancement.

FISCHER, O.

Op. 114, No. 2. At the Shooting Match 20
Good study in dotted eighth and sixteenth rhythm. Should move firmly and with well controlled arm.

GADE, N. W.

Op. 36, No. 4. Dance of the little Girls (Tanz der Kleinen Mädchen) 20
Well worth using. It is interesting and musically and pedagogically useful.

GAEL, H. van.

Op. 78. La Gracieuse. Valse 35
Deserves its name. It is a graceful waltz, easy to master, yet interesting to play.

Op. 83. Marche Guerrière 35
Stirring march. Good wrist study. Apart from its beauty, its rhythmic character is valuable.

GÄNSCHALS, C.

Op. 239. In the Mill (In der Mühle). Characteristic Piece 30
Very characteristic. Splendid for developing control of first finger (thumb). Light hand and finger staccato are needed.

Op. 29 Our Loved One (Unser Liebling) . . 30
A sentimental piece, calling for good melody playing. Very tuneful. Without octaves.

GEIBEL, A.

Good Morning. Scherzo 35
Good study in rhythm and staccato. Melody work in both hands. Full of brightness.

Good Night. Berceuse 35
A good-night song, nice to play. It is simple in construction, the theme being principally in double notes, with bass of single eighths.

GEIBEL, A,

Pleasant Summer. Melody 35
An excellent study in melody playing. Lovely little melody with simple accompaniment.

GURLITT, C.

Op. 101, No. 8. The Fair (Kirmess) 20
The spirit of the festival is in this piece. Excellent study.

The Vintage Festival 20
Requires loose wrist. A good study in wrist touch. Its modulations increase the difficulty somewhat, but do not mar its usefulness.

HEINS, C.

Op. 224 Cuckoo Clock (Die Schwarzwälder Uhr) Salon Polka 30
The runs in this call of the cuckoo will be good training. Light wrist and flexible fingers are essential.

Op. 181, No. 2 Spring Wanderings 30
Good march. Excellent practice, and effective when learned.

HELLER, S.

Petite Tarantelle 20
Thoroughly good teaching piece. Full of fire and animation, it is certain to advance the pupil's knowledge of and taste for good music.

HENNES, A.

Op. 369 No 5 Rough and Tumble (Wildfang) 30
While vigorous, the sport will do no one injury. Full of melody and spirit; a good teaching piece.

HILLER, P.

Op. 66, No. 7. The Happy Carpenter 20
Characteristic little piece, with the melody in the bass. Good study, and an attractive piece for the parlor.

HIRSCH, T.

Op. 44 On the Caroussel (Auf dem Caroussel) 35
A cheery piece, recalling summers at the shore, with the fun at the merry-go-round. Good practice, too.

HOLST, E.

Beach Promenade. March 30
Another seashore piece. A picture of the crowds on the board walk. It is a tuneful march presenting no difficulties.

Fresh Breezes. Waltz 30
A breezy waltz, easy, but pleasing and useful. Presents a great variety of melodic themes.

Restless Waves. Tarantella 30
The restless sway of the waters is well pictured in the never-ceasing movement of this composition. Worth study.

JOHN, F.

Op. 251, No. 3. Gipsies Are Coming 20
The wierdness of the gipsy is in this. Should be played quickly and with lightness. Good practice in left hand skips.

KAISER, P.

Op. 2, No. 3. Schottische 25
Graceful dance, full of melody. Not difficult. One of a set of five easy dances entitled "The Children's Ball."

Op 2, No. 4 Waltz 25
A nice waltz containing some good practice in run playing. Another selection from the same set.

KRENTZLIN, R.

Op 4 Army and Navy March 35
An attractive march, presenting no special difficulties. Inspiring and brilliant.

KULLAK, T.

Op. 81, No. 8. The Nightingale in the Wood (Die Nachtigall im Busch) 20
The trill of the bird is heard right at the beginning. A light touch is necessary. Sure to please the young player.

LIADOW, A.

Op. 26. Petite Valse 20
Thoroughly satisfying waltz. Tho' short, it grows in interest to the end.

LICHNER, H.

Lords and Ladies. Minuet 30
A graceful minuet, worth playing. Stately movement can be well brought out.

Thoughtfulness Reverie 20
Simple melody for right hand, with broken chord accompaniment for the left. Requires a good singing tone.

MERKEL, G.

Op. 31, No. 2. Merry Huntsman (Fröhlicher Jägersmann) 20
Typical hunting song, well written and brilliant. Attractively harmonized.

MUTTER, C. F.

Jolly Guardsmen March 35
Brilliant and stirring. Excellent for thirds and octaves.

NÜRNBERG, H.

Dancing in the Meadows 20
Meadows gay with flowers and children full of joy are apparent in this lively little piece.

OESTEN, T.

Op. 202, No. 4. Doll's Dream 35
A piece of descriptive music. Contains a cradle song, the dream, and a dance.

ROHDE, E.

Op. 50, No. 1. Boating Song. Barcarolle . . 30
Characteristic barcarolle. Wide accompaniment in left hand calls for careful treatment. Flows smoothly and is very pleasing.

SARTORIO, A.

Op. 229 No. 17. Free as Air (Leichtes Element) 20
Moves with the freedom its title indicates. A light hand, and a firm finger and hand touch will bring out its best effects.

Op. 229, No. 9 Off to the Chase (Auf zur Jagd) 30
Another piece of musical description. A cheery 6-8 movement, and a real hunting song.

Op 229, No 10. Torch Dance (Fackeltanz) . . 30
Characteristic piece of much merit. Excellent practice in wrist touch and syncopation. Can be made very realistic.

SCHARWENKA, X.

Op. 62. No. 6. Gavotte 30
Splendid gavotte—musically and otherwise. Affords a fine opportunity for effective playing.

Op 62 No. 10. Scherzino 30
Somewhat easier than the preceding, but equally attractive.

SCHILD, T. F.

Always Gay (Immer Flott) March 30
An attractive march with no troublesome places. Brilliant and joyous composition.

SCHWANTZER, H.

Op. 25. Cuckoo in the Woods (Kuckuck im Walde) 20
A bird imitation which will please the young player, and instruct at the same time. Good exercise in passage work.

SCOTT, H.

Quiet Delight (Stillvergnügt) 35
A bright melody sure to please the pupil. Sprightly movement.

STREABBOG, L.

Columbine 20
An attractive piece presenting a good study of light, yet singing staccato Arms must be well controlled.

Harlequin 20
Useful and pleasing piece. Suggests tumbling of the clown.

THOMA, R.

Op. 61. A Little Ballad (Kleine Ballade). Tone Piece 30
Firm fingers, singing quality of tone and attention to expression are needed here. A beautiful piece.

TOURBIE, R.

Op. 207, No. 1. March 25
Good, stirring march, presenting no particular difficulties.

TSCHAIKOWSKY, P.

The Lark's Song. Descriplive Piece 20
Characteristic of the master who wrote it. It should be played with delicacy, purity of touch, and nicety of shading.

Op. 39, No. 8. Waltz 20
Well worth using. Healthy in sentiment, and thoroughly musical.

WANDELT, B.

Op. 12, No. 1. Doll's Waltz 30
Graceful and melodious. Excellent for phrasing study in simple forms.

Op. 8, No. 4. Heart Leaves 20
Well played, this will tell a heart story. An expressive melody which should be played with a pure singing tone.

WEISS, P.

Op. 19, No. 6. Evening Song (Abendlied) . . 20
Tender little song, calling for nice treatment.

WENZEL, H.

Bell in the Valley (Glöcklein im Thale) 30
A descriptive piece in which the chime of the bell is frequently heard. Presents no particular difficulty.

Brook in the Wood (Der Waldbach) 30
Brilliant tone piece in which the gurgle of the brook, as it rushes over the stones, is heard. Excellent practice.

Greeting to Appenzell (Erinnerung an Appenzell) 20
Tuneful and bright. Of no particular difficulty, and furnishes interesting practice of light chords.

WILLIAMS, F. A.

Op. 21, No. 1. Over the Waves. Barcarolle . 35
Beside being very pretty, this is a good study in wide accompaniment for the left hand.

WOLFF, B.

Op. 197, No. 2. A Dance in the Mountains (Auf dem Tanzboden im Gebirge) 30
A study in phrasing. Should be played with a bright, crisp touch. Very pleasing.

WOOLER, A.

Little Cavalier. March 35
Graceful little march, without heavy chords or great stretches.

ZIESE, L.

Sweet Hope. Melody 20
Characteristic melody requiring a singing finger touch. Can be made very pleasing.

BOOKS.

Bon Bons—An Album of Easy Pieces.
Géza Horváth. Op. 20 . . . . Paper Binding 50

Mazourka Etude 75
Scherzino 50
These are rather difficult, but so musical that they will repay study.

Young, Elisa M.
Staccato Etude in B 75
Rather difficult.

Any of the above will be sent for examination, if desired.

Modern Foundation Studies

—in—

Piano Playing

Graded for Beginners.

By W. F. SUDDS.

The great progress made in the art of piano playing during the past few years has, to a large extent, rendered older books of instruction obsolete. All good works contain the proper material, but its arrangement, and the method of presenting it to the immature musical mind, often leaves much to be desired. Improvement of these particular features—the arrangement and method—has been the guiding thought in the preparation of "Modern Foundation Studies."

It is a work for beginners, and matters of vital importance, such as formation of the hand, methods of touch and tone-production, are treated in detail. In addition to the comprehensive treatment of these subjects and numerous musical examples, exact positions and movement of the hands in the proper performance of the various touches are profusely illustrated. This feature will be appreciated by teachers.

The work contains foundation material on which the most elaborate superstructure may be safely built. The music has been selected with great care, to clearly illustrate the point under consideration in an attractive manner without wearying the student.

Paper Binding. Price, $1.00.

A NEW AND BEAUTIFUL SONG

"Abide With Me"

MUSIC COMPOSED BY

G. JENNINGS BURNETT.

HIGHLY APPRECIATED BY

Their Majesties King Edward VII and Queen Alexandre, Madame Patti and Madame Albani. Sung at recitals and church services by many leading soloists in England and America.

VIDE PRESS:—"For many decades the eloquent prayer, 'Abide with Me,' has been sung to various melodies, but never to any more commensurate with the spirit of the appeal than that which Mr. Jennings Burnett's talent has produced. An effective enharmonic change opens the third stanza—'I fear no foe;' the soft expressive strains to 'Hold Thou Thy Cross,' preceded by a striking declamatory passage, 'Where is death's sting!' leads to a crescendo climax—'Heaven's morning breaks'—an admirable phrase for the full scope of any vocalist's powers." . . . . . "A singularly splendid effort and there is in it a noble pathos, well sustained throughout, which reaches the hearts of all. This beautiful song will prove a welcome acquisition to the repertoire of every singer, and is destined to leap to the very front rank of popular favor."—*Daily Times.*

PRICE, SIXTY CENTS.

Chicago: CLAYTON F. SUMMY CO., 220 Wabash Ave.
London, Eng.: WEEKES & CO., 14 Hanover St. Regent St., W.
WHALEY, ROYCE & CO., 158 Yonge St., Toronto, Can.

"NEARER MY GOD TO THEE," compass D to G, by same composer.

THIS SYSTEM IS COVERED BY COPYRIGHT.

MUSICAL KINDERGARTEN FOR THE PIANOFORTE

By FANNIE CHURCH PARSONS.

This system is most simple in outline and material.

It is most comprehensive and complete.

The materials used are, while very durable, most suggestive of the beauty of the art of music.

The lessons are equally instructive to either child or adult beginner.

The students do much real piano work, thus no intermediate course is necessary.

The stories and songs do not savor of the grotesque, but tend to refinement and culture.

The price for normal work, including materials, is within the reach of all.

The work can be taken by mail, or of a normal instructor, or of Mrs. Parsons personally.

Teacher's training classes conducted by Mrs. Parsons are formed the first Tuesday in each month in Chicago studio.

The Music Review

Is a RELIABLE source of information in regard to the most desirable and interesting new music that is published in America and Europe. Each composition listed is described as to character and grade of difficulty. New Books on music or about music, and articles relating to music that are published in the magazines or other periodicals, are also reviewed in *The Music Review.* The reviewing of music is conducted by Walter Spry. The reviewing of books and articles on music by Karleton Hackett.

The Music Review is the only paper published on these lines. Its aim is to be a real help to the profession in the selection of music and musical literature. Published monthly excepting July and August.

SUBSCRIPTION PRICE, 50 CENTS PER YEAR.

WINTER.

Winter white is coming on;
And I love his coming:
What though winds the fields have shorn—
What though earth is half forlorn—
Not a berry on the thorn—
Not an insect humming:
Pleasure never can be dead:
Beauty cannot hide her head!
Look! In what fantastic showers,
The snow flings down her feathered flowers,
Or whirls about, in drunken glee,
Kissing its love, the holly tree.
Behold! the Sun himself comes forth,
And sends his beams from south to north—
To diamonds turns the winter rime,
And lends a glory to the time!

Such days, when old friends meet together,
Are worth a score of mere Spring weather.

—*Bryan Waller Procter.*

THE PUPIL'S RELATION TO SUCCESS OR FAILURE.

CONSTANTIN V. STERNBERG.

A pupil's success or failure is determined by what he can do after he leaves his teacher's hands. If, after a reasonable time, he can stand on his own feet; if, in other words, he has not so much learned *what*, as *how* to think; if his acquired knowledge is not a dead lun p of ballast, but a bundle of live seeds to germinate, grow and blossom into new thoughts under the sunshine of life in the garden of his own mentality, then the pupil is a success. If not, he certainly is a failure, though he may play half a dozen pieces well (with his teacher's conception), and a dozen diplomas may hang on his walls.

The factors which must unite to bring success about are *three*, but before naming them, it might be well to say that "talent"—of which many people have a very exalted idea and which they regard as the main factor—is *not* among them!

It would lead me far beyond the confines of the question on hand to rectify all the queer notions I have heard with reference to talent; it is too large a subject to be put off with a few words, but this much may be stated right here, that the question of talent does not enter into the studies of a pupil until he ceases to be a "pupil." What he can or cannot do *after the craft of the Art is fully mastered*, that alone can be considered as an indication of talent and genius, or their absence. Of a thousand pupils that say regretfully: "I have no talent," nine hundred and ninety-nine use this phrase as a screen for their laziness, frivolousness, and lack of self-respect. Yes, self respect! For, *self-respecting people do their duty* and leave the responsibility for the outcome with those who charged them with it. One of America's keenest thinkers said that talent and genius were like pretty enough coaches, but it needed a horse to pull them. WORK *is the thing*, not talent! Talent, forsooth!

The three factors in the making of a pupil's success are:

The pupil's parents,
The pupil himself,
The teacher.

The exact proportions in this compound vary in the individual cases, because in some instances the parents have to make up for the teacher's lack of energy (such parents are rarer than white ravens), while in other cases the teacher has to supply what the parents have neglected on the score of home rearing. Still, whatever the proportions be, the factors are *these three and no more.*

The Parents.

Not excused, but explained it might be by the hyper-commercial tendency of the present time, many parents center all their energies upon the acquisition and accummulation of money. They evidently endeavor to provide a life of idleness for their progeny; they wish to make "ladies" of their daughters, "gentlemen" of their sons, and commence with the purely external attribute of wealth, very much like the little German apprentice boy who asked his master to assist him towards a new coat because his own savings were slightly insufficient, and who, when asked how much he had, replied: "The buttons!"

If these parents would use three quarters of their energies for the supervision of their children's education; if they would instill the principle of filial obedience, regard for their elders, a respectful attitude towards wisdom and superior knowledge in their children's mind and heart, they should accomplish results which would astonish them by the extent of their ramifications; results which, after the direct benefits to their own children, would reach far into general sociology and do much to allay the ever-growing discontent among the classes. Not long ago a richly, though not well, dressed young "lady" came to see me for the first time and while I turned to my music cabinet to pick out something for her to read, she walked about the room and—whistled! Whistled "Sweet Marie!" Our business relations lasted for three lessons. And yet—the poor child, despite all her vulgarity and impertinence—and there was a generous measure of that—was not to blame; she had no parents, but merely progenitors. Of course, her parents had sent her to a teacher, to be sure, and proposed to pay him, but is that all! Does not the largest part of their duties lie in *making the child receptive to teaching*, in fitting it for association with well-mannered people? Other parents there are who interfere with the teacher's advice and spoil the child's confidence in the very man they have selected, thereby stultifying their own judgment. Still others interrupt their children's study because "it is not yet cold enough to leave the mountains or the seashore"—not cold enough *for the parents*, mind—or because it rains, or because it doesn't (too nice to send the "poor child" to the lesson), or because it is Lent, or because of the dance to-night," where the "dear child" must look fresh and rosy—as if the music lesson was an anticosmetic—in short because they give precedence to their "notions" before the child's education. How happy is the teacher when he feels that the pupil's parents are a help to him! He never forgets them! Such happiness does not come to him every day, though, and often, very often, he feels like beginning his teaching with the parents. Much more could be said on this subject, but space prevents.

The Pupil

Is really, if not a negative, a reflected quantity. Darwin, Huxley, Spencer, and many other enlightened minds, have saved me the trouble of proving this. Still, that does not lessen the pupil's *responsibility*. When he asks, if he could not play this or that piece instead of the one selected by the teacher, it is his parent's fault; when he comes unprepared or irregularly to his lessons, it is his parent's fault; but when he disregards his teacher's advice, when he is listless, inattentive or trifling *in the lesson*—that is his own fault! He may go to a store, buy a parcel of goods, pay for them, receive them and—leave them on the counter. That would be *his* fault! And oh, how many of our "customers" forget to take with them what they bought!

Some pupils display a perfectly astonishing mental energy and ingenuity in the invention of pretexts and excuses for the poor preparation of their lessons. To them I will say that one-third of this energy applied to their work would save them all their excuse-making. I have often told some such pupils: "You may (possibly, though not honestly) get rich without work; you may obtain position, station, influence without work, though I don't believe it possible; but what I positively *know* and can swear to, is that you will not learn music, nor any thing worth learning, without good, honest, earnest WORK!"

The Teacher

Must be characterized by two types. Some teachers *teach* and some just *give lessons*. The two types are easily distinguished by what they know *outside of music*. I know a pianist of international repute who plays most beautifully—I never fail to listen when he comes to Philadelphia—and who even wrote a few little compositions, just good enough to show that he is a good musician. He teaches—well, no! He gives lessons. To be sure, much can be learned from him, *but the pupil* (who himself must be almost an artist, to start with), *must extract by his own observation what he wishes to learn*, instead of the teacher's telling him. That is what is called the higher form of study. It is "study" on the pupil's side, but it is not "teaching" on the teacher's part. Such a teacher was, for instance, Liszt, and when I say this I sacrifice not one atom of my deep, warm love and unbounded admiration for him, one of the grand masters in music and *the dearest man* I have ever known. (My father died when I was three years old.) In his studies in Weimar the musical future and hope of the whole world were focused. Every student was already something of an artist. This condition, however, is a very unusual and rare one; it is not continuous, for there is no such central point in the world now. At that time, however, there was another musician, in Berlin. *He brought* most of these fine fellows and girls *up to the point* where a short visit with Lizt would really benefit them, as an addition to an already complete and solid structure. He brought out nearly all the pianists of his day: Scharwenka, Moszkowski, Sherwood, Liebling, Adele aus der Ohe, Martha Remmert, Erica Lee, Pirani, Nicode, your humble servant and many, many others whose names would consume too much space here. And many of those dispensed with Liszt altogether and made their way just as well and better than some of the others. That man was Kullak! He was a pedagogue, a teacher! He *taught!*

A teacher's supreme medium of communication with his pupil is, and must be, *analysis*. To analyze things so that they become plainly intelligible, the mind must be well and carefully trained, and this training cannot be acquired by the study of any *one* thing. As we receive a new additional life with every new language we learn, so we understand the interrelation of things better with every bit of knowledge which we acquire in *other* than our special professional lines. We music teachers must gain access to the best in our pupil's natures, we must go far beyond music in our influence over the pupil, but, unless we study ethics, general art esthetics, literature, philosophy, and at least the gist of modern sciences, how are we to go beyond music? Of course, to return to Liszt for one moment more, he was one of the most broadly educated men then living, but he had not developed the analytical faculty in himself. Kullak was *doctor juris*, besides being a (Royally decreed) professor of music. His mind was trained in science, and therefore he was the better teacher.

When the first of the three factors named, the parents of the pupil, and the third, the teacher, act in harmony, the importance of the second, the pupil himself, decreases very much and is apt to be rather the result than a factor; but there are still his *responsibilities*, and when *these* are fulfilled in addition to the other two factors, what can be the result but a grand and complete success!

WHEN AND HOW TO TEACH TOUCH.

FRANCIS L. YORK.

PHILLIP SCHARWENKA.

As long ago as 1798 Türk, in his Piano School said: "An absolutely fine tone must be distinct, full, sensitive, bright, and, above all, agreeable; must not become harsh and grating in its highest intensity, or indistinct in its extreme softness; moreover, it must take on the characteristic quality of the composition; *i. e.*, it must be relatively fine. He plays most beautifully whose tone most nearly approaches vocality." Thus we see that even in the eighteenth century attention was being paid to the matter of tone production. But it was Adam, in his Paris Conservatory Method, who really first called the attention of piano students to the possibilities that lie in touch on the piano. He says: "There is an extraordinary variety in the modes of touching the key and drawing out the tone. Only through the touch can a fine tone be obtained * * * the pupil * * * must imitate, as far as possible, the singing tone, and the manifold inflections of the voice." He also gives some directions as to how such results are to be obtained. Although now and then some one gains a short-lived notoriety by contending that the touch cannot affect the tone, it is now very generally admitted that the touch does affect the tone, and that it is necessary to study seriously and carefully in order to get good results in tone production. It being conceded then that varying touches give us correspondingly varying tones, it is important for the player to know how to produce these different kinds of tones and for the teacher to know how to teach his pupils to produce them.

The first question to be answered is: When shall I begin to teach these different touches? As a rule, teachers generally regard such work as belonging to the last or highest grades of piano teaching. This is true, but only in the sense that arithmetic belongs to the highest departments of mathematics—it belongs to them since it is the foundation of them and is indispensible to them. Those teachers who reserve the teaching of touch for the higher seem to forget that in any playing the pupil must use *some* kind of touch, and the better the touch is the better the playing will be from the beginning. It is a common experience with me, and I must suppose with other teachers, that pupils coming to me play with their muscles in such a condition of rigidity that the tone produced is such as no really musical person can tolerate. When we remember how soft and elastic the muscles of young children are and what a beautiful touch a child may have if he is not taught, or at least allowed, to produce the tone badly, it is astonishing how bad a touch most young children have. It is not necessary in teaching children to say anything about touch, or even to call the child's attention to the different sound of the piano when touched properly and when pounded or punched; all that is required is to teach him to use his hands in as easy and natural a way as possible and the "touch" will of itself be good. I am not saying that a child or any beginner on the piano will, without instruction, learn to use all the numberless touches to which the piano can be made to respond; that requires long, arduous practice, a sensitive ear, constant and attentive listening to one's own playing and to the playing of others. But I do say that the beginner should be taught, from the very first, in such a way that his touch will, at least, not be bad.

It being understood then that the time to teach touch is at the beginning of study, the next question is, How shall we teach it? This, of course, to a great extent, will depend on the pupil. No two pupils are alike and no two can be taught in exactly the same way, but we may divide all pupils into two classes—those who have had some instruction and those who have not. Take the second class first. Let us say that the child comes to the teacher for his first lesson. If he is to do any practical work, if he is to practice or play at all, he must put his hands on the keys; if he does this he must use some kind of a touch, and the teacher's business is to see to it that he uses a good one. Now, that he may do this, I have found that the best way is to turn his attention as much as possible away from the fact that he is going to "play," and not to let him think of finger action or finger position at all. First, tell him to drop his arm by his side, letting the hand hang as in walking. The hand will, naturally and without effort, take the best possible form for most kinds of piano playing—possibly the knuckles may be a little too much bent, but that is of very little consequence here. Then have the pupil raise the arm and lay the hand on the keys, letting the tips of the fingers rest lightly on them. Avoid any reference to the position of the fingers, do not tell the pupil to turn his hand this way or that, nor to curve the fingers more or less; in fact, say nothing about the fingers. It may even be necessary to talk of something entirely unconnected with piano playing in order to get the pupil's attention away from the hand so that it may be entirely relaxed. If the position of the hand is not exactly what is wanted, let that go for the present; the principal point now is the relaxed condition of the hand. The next move is to let the forearm drop at the wrist in such a way that the thumb catches on some key—no matter which—just above the first joint, and drags the key down with it. A repetition of this motion forms the first exercise in "touch." The tone thus produced is full, round and without the least harshness. This is the easiest possible way to produce a tone on the piano, and the action is one that is constantly used in chord and in *mezzo staccato* playing. With a beginning child this action will suffice for his playing for some little time, gradually allowing him to use the fingers in place of the thumb, but always with the same dropping action of the arm. For finger action I should ask the pupil to place his hand on the keyboard just as before, and then, with my own finger, tap each finger slightly on the second joint, thus pushing down the keys. In this way the pupil at once gets the idea that the finger needs no raising, either before or after the tone is produced—that a very slight and sudden pressure during an extremely short time will produce a tone with the very smallest expenditure of energy. The little strength that is required is entirely used in pushing the key down, the key itself will bring the finger up if one will let it. As soon as the pupil can use this action in some simple exercise he has learned to produce a good quality of tone by the action of the fingers alone. In both touches (arm and finger) the tone must necessarily be of good quality, for the *sine qua non* of good tone production—relaxed or devitalized muscles and elastic action—is present. Exercises of simple form, making use of these two actions, should be practiced daily. The teacher may use little studies, technical exercises from some work on piano technique, or he may invent some little figure—the simpler the better—for the pupil's practice, and should insist that in his playing of the little instructive pieces, of which happily there is now so large and so excellent a selection, he shall use these actions. With beginners the problem of teaching touch is really not very difficult, that is to say, with *young* beginners. Those who begin later in life have to contend with a certain self-consciousness, entirely lacking in children, that often greatly interferes with the elastic use of the muscles that is so necessary for the production of a good one.

The other class of pupils of which we spoke, namely, those who come to us after already having studied, are, as a rule, much harder to deal with. Of course, if their instruction has been good we can simply continue in the same way; but frequently pupils have formed extremely bad habits of tone production, so that the tone is either weak and flabby or else it is harsh and coarse Worse than this, the pupil has not had his attention called to the fact that his tone is bad and he may even be totally oblivious of the fact that both good and bad tones are producible from the piano. With such the first thing to do is to awaken a perception of the value of a good touch. This cannot be done by playing single tones of good and of bad quality, but by playing for the pupil a few measures of some composition, first with as full and round a tone as the teacher is capable of producing, then with as bad a tone as possible. When the pupil can appreciate the difference between them he will be anxious to learn how to produce the good and avoid the bad in his own playing. The exercises I should use are about the same as in the case of the child beginning, but with the older pupil we work towards the tone, consciously and purposely, while with the child nothing is at first said about tone and touch.

It would lead us too far to inquire into the ways of producing other qualities of tone, such as the singing or melody tone and the various kinds of staccato, leggiero, carrezzando, portamento, etc. It is hoped that sufficient has been said to suggest to some one the desirability of teaching tone production, at once, to all his pupils, and a hint given as to the surest method of so doing.

It is said that Rubinstein used to sit, hours at a time trying, in all possible ways to imitate, on the piano, the beautiful quality of the tenor Rubini's voice. Certain it is that no one before his time was able to produce so many tonal effects. But of all tone-painters Paderewski is the greatest. His palette is filled with all the hues of the many-toned orchestra. It is marvellous how his fingers will, at one time, draw from the piano a tone of the softness of a flute and at another of the brilliancy and blare of a trumpet. We cannot expect to have any Rubinsteins or Paderewskis in our classes, but if we can help our pupils to acquire the ability to shade the tone according to the passage they are playing and thus to make more distinct to their hearers the true meaning of the composition, we shall have helped, in no slight measure, the cause of the art we all love.

THE TEACHER OR PUPIL WHO READS.

The greatest work that confronts the teacher of any division of music is to awaken the mind of the pupil, to bestir his mental powers to activity and receptivity, to arouse the finer musical instincts that are a result, in the musical mind, of awakened mentality.

Anyone can acquire technical agility if he has perseverance enough. As some good writer says: "Any fool can play fast, but it takes a good player to play slowly." Which is to say that fingers are more readily trained to play than brains are to think. The hardest thing to do in teaching is to get pupils to think—just simple, ordinary, plain, straight *think*.

This being true, the more one can get a student to use his brains in an accurate way on musical material, the better and quicker will come the required musical results. Musical material is not all in notation; much of it is in ordinary language; and, for this reason, an attractive, well-edited magazine is a most desirable adjunct to the teacher's work.

† ↓ †

When a person is studying with a teacher he gets the best, supposably, that one teacher has to give; when the student reads a good musical magazine he gets much of the best that a score or two of good teachers and writers have to give. He not only learns facts, but he gets hold of new and different theories, and, better still, new presentations of old facts and theories.

All teaching is based on theory; but no teacher can have tried all the theories or acquired all the good methods. The valuable things in this world are ideas; and you can get more of them from one musical magazine than you can from one teacher.

One may not acquire a finished technic or an artistic delivery by reading a musical magazine; but he can do what is as good, or better, for the average student; he may become a well-informed musician by adding the careful reading of a good magazine to his theoretical and historical study.

† ↓ †

It then stands the teacher well in hand to recommend good musical reading to his pupils, not only in a general way, but specifically. Recommend the best magazines, call their attention to this strong article or that, this new theory or that, this method or that, this musical book or that.

But if the teacher himself does not read, what can he advise the pupil? It is surprising, the large number of teachers so wrapped up in their own egotism and musical money-getting as to entirely shut their eyes to the rest of the world. I know teachers who do not read a magazine or musical book from one year's end to the other. So do you. How can they be broad? How can they broaden the musical life of their pupils? How can they do their pupils that musical good that should be their aim and the pupils' desire? When asked for his monument the great architect wrote, "*Circumspice.*" When asked for the non-reading, uninformed teacher, one must reply in the same word, "*Circumspice.*"—*W. Francis Gates.*

CULTIVATION OF MEMORY.

A. J. GOODRICH.

No branch of music study is so barren of results as is that relating to practical musicianship and memorizing. Pupils frequently consume a month's time in memorizing a composition which could be learned in a day. That there is a rapid method for memorizing music is proven by the fact that all first class artists, such as Sherwood, Stavenhaven, Joseffy, Hyllested, Carreño, Zeisler and Rive-King perform, without notes, practically the whole repertory of classic music. They memorize a new selection in a few hours or in a day at most.

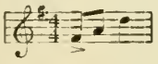
The requisites for rapid memorizing may be stated thus:

1. Practical knowledge of music.
2. A rational system for comprehending and retaining the music.

By the former is meant a thorough understanding of major and minor scales in all keys; of the formation and inversion of concords and discords, and of the principles of harmonic progression.

By the latter is meant the principles of music structure, whereby the student may be enabled to build certain passages from the model, if not to recreate a considerable portion of the music from the designs furnished by the composer. Let us suppose that a phrase, consisting of twelve notes, is evolved from a motive of three. The theory is, that if the first three notes are well-analyzed we can readily supply the other nine comprising the phrase. That is a saving of seventy-five per cent. Sometimes the saving would be a little less; at other times it would be much greater.

Nearly all music is composed of sequences; or, rather, some form of repetition constitutes an important constructive element of composition. Hence, by practicing the various species of sequence—ascending and descending, inverted and transposed—the pupil would soon become so expert that he could readily apply the principles as soon as the models or designs were sufficiently analyzed. A motive from Beethoven is selected as illustration. This is a model:



Before sounding this on the piano or organ it should be analyzed melodically and rhythmically, thus: *F♯* to *A*, a 3d; *A* to *D*, a 4th. (In diatonic sequence it is unnecessary to give the exact theoretical designations, because the next 3d will be major instead of minor.) The natural melodic sequence will proceed alphabetically, therefore the second group will begin upon *G;* the third upon *A;* the fourth upon *B*, and so on. The main accents (one and three) will thus reveal a melodic outline: *F♯, G, A, B, C, D*, etc. This must be well understood and remembered, because it simplifies the process.

After observing the key and the rhythmic arrangement,

the student may proceed to construct the sequence mentally. The first and surest mode of procedure is thus: name the notes of the sequence orally, following the interval formula as described, that is, a 3d and a 4th in each broken chord group. Continue to name the notes until the octave above the starting point has been reached. * * * The passage may now be sounded on the keyboard, slow at first, but in regular time. Repeat a little faster. * * *

Now play the passage descending. As a practice these sequences should be continued up or down several octaves, and authentic cadence is to be included at the close—ending upon the key-tone. * * *

The next step consists in transposing the preceding sequence into all the major keys. Proceed chromatically, *A flat, A, B flat, B, C, D flat*, and so on. All this should be accomplished without a mistake, even tho' the movement be as slow as adagio. And it is of the highest importance that the rhythm and movement be exactly maintained. If a slight mistake occurs *do not try to correct it* (that is impossible), but proceed carefully in strict time. No habit is so deleterious and distressing as that of attempting to correct mistakes and thus stumbling through a passage. An error or two may be corrected, to a certain extent, by repeating the entire passage more carefully; or, by practicing a certain figure slowly and separately until it is mastered. But the habit of stuttering and destroying the rhythm is one which no teacher should permit and no pupil should cultivate.

This sequence, and all others selected for practice, is to be played by the left hand separately, up and down.

The writer also recommends that the original motive and its resulting sequence be played inversely, that is, reading the notes backward. Bach was partial to this device, and it has been employed by many composers. Practice the reversed figure with both hands separately. Now, by assigning the original motive to the right hand and the inverse figure to the left, the latter will serve as a species of contrapuntal accompaniment to the former. One measure of this combination is given as a guide:

Andante. Then Moderato. Finally Allegro.

Ex. 2.

This is somewhat similar to what the writer terms reciprocal counterpoint. Transpose as directed; then invert the two parts, giving the l. h. the original figure.

The Hatch Music Company recently issued a small work, entitled "Guide to Practical Musicianship; Intended to Supersede Rote Memorizing." This is a complete exposition of the new method of memorizing, briefly outlined here.

The main title is, perhaps, not so readily understood as the sub-title, "intended to supercede rote memorzing," would have been. This latter process is irrational and usually results in failure, because there is nothing to aid and stimulate the memory, nothing that appeals to the intellectual faculties. The new method is developed according to the principles of sequence and based upon the idea that whatever is to be retained in memory must first make an impress upon the mind of the performer. Every motive or design is analyzed and various forms of analyses are explained in the book. With these logical premises as guides the entire system demands of the music student who would successfully prosecute it—Practical Musicianship. But this is precisely what the majority of pupils lack and what they most require. The book aims to show how practical musicianship may be readily acquired and this is why the author named it as he did.

The results already attained through this new method are most gratifying, and one discerning critic has declared that it "raises the student from the level of a parrot to the height of an intelligent, thinking being."

HABITS OF OBSERVATION.

THOMAS TAPPER.

I.

When one thinks for a moment upon the expression, "Habits of Observation," it is immediately suggested to ask: "What is it that the mind is turned to most naturally? What is it that the individual has a desire to, which prompts him to observe?" On the reply to these questions there is stated the estimate of the man; whether his mental quest be a worthy one; whether his mental life concerns itself with great or small; and finally whether there be method in the process. It is then evident that in "Habits of Observation," there are included:

1. The nature of the action (what prompts it).
2. The process in the action.

The nature of the action may be traced back to many causes, chief of which are two:

a. The inherent natural impulse.
b. The educated impulse.

It is maintained in all educational schemes that while knowledge itself has much value to the learner, it is of greater moment for him to gain familiarity with the various departments of human thought and to be trained into the best ways of investigating them. Stated in other words this says, the young man goes to college less for the immediate purpose of acquiring knowledge than for the ultimate purpose of acquiring familiarity with the trend of human investigation and of having instilled in him the best processes of proceeding to carry on an investigation. The gain of this point of view in college work is very great. Its immediate fruit is this: By bringing the young man in contact with many lines of thought, he is given an opportunity to find himself by showing his responsiveness to one of them over the others; it gives him the elementary training which, developed by practice, best permits him to do the most as a worker and as an investigator; and lastly, it places knowledge before him in its true light. This "true light" of knowledge is this, he gathers it and increases it, not from books, but from the activities of the subject. Men who learn thus from life are apostles of the truth; men whose habit it is to look at life discreetly and to turn for all evidences to books ever betray the unreal.

The truth of these simple statements is at the basis of the more than ever repeated statement, that whatever profession or employment the young man may elect to follow, he will ultimately do better in it if he be college-trained. But, college-trained or not, he must fully understand the basis of observation and its activities by questioning himself closely regarding the fundamentals stated in the opening paragraph: 1 The natural impulse of his habit of observation. 2 The manner of its performing its function. Self-investigation on this basis is often surprising and may be made to suggest simpler and directer ways of doing.

II.

The activity of the world, in seats of learning, in busy streets and market-places, in homes, in children's play is to the eye an activity of moving people, moving animals, moving things. It seems, at first, to be the rush and turmoil of motion, but a moment's thought tells us that the activity manifest to the eye is but a picture of activity of another kind; that as the tree bending in the wind is a picture of the impulse given to it and not a voluntary impulse so the activity of life in its bustle and confusion is a picture of thought-impulse. Thought is pictured by all that goes on. It is plain then that the activities of life are to be regulated only by consideration of their initial cause. As that cause is thought, it is from consideration and regulation of thought that it becomes most potent and produces frictionless activities.

The individual does not need the hint that the world's activities are in a larger degree his own. His doing is also an activity proceeding from thought. Any business or profession he represents will be improved by his efforts in proportion as he regulates his thoughts, for they are the initial impulse of his actions.

III.

Every man, active in any pursuit, becomes an educated man, if his education is based on good method acquired in early life. If in addition to this he loves his calling, his close scrutiny of it, that is, his observation of it, will tend constantly to make him reconstruct his ways of doing. Better system will come into his work and efforts will yield more because there is back of all a mental consideration which determines his methods more and ever more precisely. When a man is thus conducting the affairs of his business, or of his profession, he may truly be called an educated man, one who is daily working better because he is thinking in a superior manner.

Observation then is a natural impulse which gains its habits by the nature and force of its own quest. To the student of music as to the man of business it is the great organizer, the improver of the mental machine which enables it to do more and better work with little din and confusion. Noisy workers are not invariably forceful and direct workers.

And habits of observation, it will be seen, are not merely to be taught to another, but are to be gained each for himself by close watchfulness upon the individual tendency. They follow from the force of personal ambition. They teach a man ultimately to base his actions on substantialities; to discern clearly and to pursue that which is essential; to avoid raising to a place of importance the inessential.

Music embodies the inward feeling of which other arts can but exhibit the effect. The warmth, the keenness, the intensity, the delicacy of feeling, find utterance in music, and so are traced the natural alliance of religion and music—religion, which draws forth the deepest feelings of the heart, and music which expresses them. "The sorrows and fears of the conscience speak out in penitential chant and Litany; the gladness of our rejoicing in psalms and hymns and spiritual songs, and the homage to what is great and noble is fulfilled in the songs of adoration to the glory of God."

LISZT AND SENKRAH.

LISZT THE MANY-SIDED.

HENRY T. FINCK.

"I have now convinced myself that you are the greatest musician of all times."

Thus wrote Richard Wagner to Franz Liszt, on the sixth of December, 1856, a year in which he had given up much of his time to perusing his friend's symphonic poems.

When one considers the extraordinary diversity of Liszt's activities, and the great influence he exerted in nearly all branches of music, Wagner's exclamation seems justifiable. True, it was only as a pianist that Liszt had never had an equal; but his rank in all other branches of the art, except in opera and chamber music, is so high that the sum total of his achievements probably does make him "the greatest musician of all times." He certainly was the most many-sided.

Saint-Saëns, greatest of French composers, has been so much impressed by Liszt's influence on the destinies of the pianoforte that he knows nothing, he writes, to compare to it, except the revolution in the mechanism of the French language brought about by Victor Hugo. "This influence," he adds, "is more powerful than that of Paganini on the violin world, because the latter has remained confined to the region of the inaccessible, where he alone could dwell, whereas Liszt, starting from the same point, deigned to step down into the public roads, where anyone who is willing to work hard may follow him."

At first, it is true, Liszt's pieces seemed unplayable by anyone but himself; but in course of time it was found that while he had created unprecedented difficulties for the players, he had also, by his original treatment of the fingers and a more picturesque way of writing music, provided the means of overcoming these difficulties.

He was the first to reveal the full sonority of the pianoforte, and its capacity for reproducing orchestral effects. In the first half of the nineteenth century orchestras and conductors were not up to the present mark, and thousands of amateurs got their first correct conception of Beethoven's symphonies by hearing Liszt play them on his pianoforte.

Many stories are told regarding the marvelous effect of Liszt's playing on his audiences. When he was quite a young fellow he once played a concerto in Paris so entrancingly that the members of the orchestra forgot to join him again at the proper place, to the delight of the audience. On another occasion he played at a soirée where one of the guests was the Empress of Russia, whom he had offended by not going to St. Petersburg. She was so cold that no one dared to applaud his first pieces. This piqued Liszt, and he made up his mind to conquer. His next piece was Schubert's "Ave Maria," and this he played with such soulful expression that the Empress burst into tears, and everybody applauded frantically.

Most extraordinary were the scenes enacted in Berlin in 1842. So unprecedented was the enthusiasm aroused by his playing that he was called upon to give twenty-one concerts in two months. The Sing-Akademie was soon found too small to hold all who wanted to hear him, and he had to take the Auditorium of the Royal Opera House. The Princess Wilhelm having heard a rumor (utterly unfounded) that Liszt had lost all his money in a game of cards with Baron Rosenberg, invited him to the palace and there, to his great surprise, offered him, in the name of the King, a purse with $20,000, "to help him out of his scrape!"

The university students gave vent to their enthusiasm by unhitching the horses and dragging the carriage in which he left the hall to his hotel. But the most astounding episode came at the end, when he left Berlin, immediately after his last concert. Thousands stood in front of the hall cheering when he came out, and thousands more lined the streets through which he drove, while all the windows were occupied, including those of the palace, the King and Queen having returned to the city specially for this purpose, Liszt's carriage was followed by thirty carriages with professors and students of the university, and many others joined the procession.

All this in honor of "a mere pianist!" Times had changed indeed since the epoch when Haydn and Mozart could be treated like lackeys! As one of the Berlin critics, Rellstab, wrote in regard to Liszt's departure, "not *like* a King but *as* a King he left us, surrounded by the cheering populace—a King in the eternal realm of the mind."

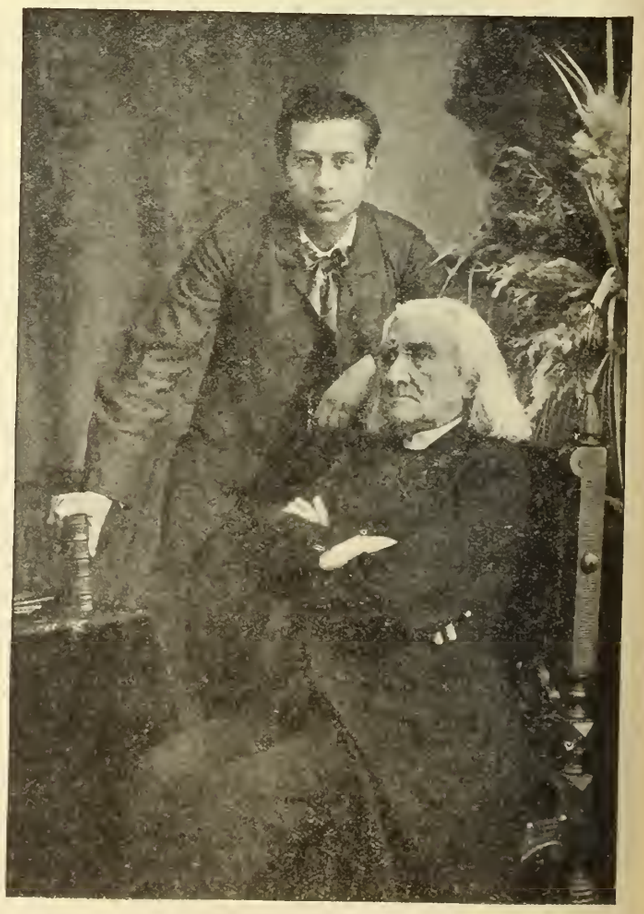
A king he remained throughout his life. When Miss Amy Fay was one of his pupils, in 1873, she wrote: "All Weimar adores him and people say that the women still go perfectly crazy over him. When he walks out he bows to everybody just like a King!" And regarding his studio she wrote: "Liszt is just like a monarch, and no one dares speak to him until he addresses one first. . . . When he extends his royal sceptre you can sit down and play to him. You never can ask him to play anything for you, no matter how much you're dying to hear it. If he is in the mood he will play, if not you must content yourself with a few remarks. You cannot even offer to play yourself."

It is well-known that although Liszt played only half a dozen times in public (never for his own purse) in the last thirty-nine years of his life (1847–1886) he kindly placed his art and his genius at the service of his pupils to the end. Some interesting details on this point are given in Miss Constance Bache's recent book on her brothers ("Brother Musicians"). Think of Walter Bache's extraordinary luck in being able to write such a thing as this regarding his sojourn in Rome: "Liszt lives at the Villa d'Este, an enormous uninhabited villa with a splendid view of the Campagna. We lived at the hotel, and went to Liszt every morning at about eleven, when he played to us till one, when we all dined together; then we visited him again at about six and stayed till 8.30 with him."

Only at the very end of his career, two months before his death, did Liszt once more consent to play in a semi-public way He had been coaxed to England to attend the performance of his oratorio "St. Elizabeth;" and when they had him there everybody, of course, was eager to hear him. Before starting he wrote from Budapest: "They seem determined in London to push me to the piano. I cannot consent to this in public, as my seventy-five-year-old fingers are no longer suited to it; and Bülow, Saint Saëns, Rubinstein, and you, dear Bache, play my compositions much better than my humble self." But they did push him to the piano all the same. Mme. Albani had the courage to ask the "King" to play and he graciously consented. Indeed, he played several times, and it is interesting to know what were his selections. Among them were one of Schubert's "Soirées de Vienne," Chopin's nocturne Op. 32, No. 2, and his etudes in A flat major and F minor, a Bach fugue, a Weber polonaise, his own fantasia on the Masaniello Tarantella, part of his Dante symphony, a Hungarian rhapsody, etc. Together with Bache he also played the superb Crusaders' March from his "St. Elizabeth."

I regret to say that I had but one opportunity to hear Liszt play. It was at Vienna, in the winter of 1880–1881. The article I wrote about this occasion never appeared in print, as the musical periodical to which I sent it suddenly ceased to appear, and the manuscript was lost. But I can recall vividly, even without the aid of this article, the deep impression made on me. Liszt did not play alone, but sat at a second piano accompanying a countess. His pupils tell me that he had a habit, in Weimar, of thus sitting at a second piano, frequently repeating passages played by the pupils to show them how to do it. At other times he played alone. "Instead of one hour," writes Weissheimer, "we would then have three or four hours. A candle stood on the table, and all about lay cigars of the best quality, to which we were expected to help ourselves freely. As a matter of course nothing was ever said about remuneration. Liszt would have felt offended at the suggestion of such a thing."

Weissheimer also dwells on Liszt's orchestral manner of playing the piano; as on one occasion when he reproduced his "Faust" symphony: "As a matter of course he again made us hear the whole orchestra, and of course the way he did this was again beyond



LISZT AND SILOTI.

all conception—and of course we were all ecstatic. The Princess jumped up from her sofa after the 'Gretchen,' seized Liszt, and kissed him so enthusiastically that everyone was moved." Liszt was used to being kissed by enthusiastic ladies!

To be universally esteemed the greatest pianist of all times would seem glory enough for one man. But Liszt was very much more than that. He was the most active and influential of all musical missionaries; he was an original song writer, and composer of pianoforte pieces; he was epoch-making as an orchestral writer through his creation of a new form, the Symphonic Poem; his organ pieces opened new vistas, and his oratorios and other sacred compositions are unworked gold mines for the most part—music of the future. In addition to this he was the greatest interpreter and music teacher on record, one of the ablest editors of the classics, and one of the keenest and most sympathetic of critics. A mere sketch of each of these phases of his activity would require several pages of THE MUSICIAN. Here I can dwell on only a few characteristic details.

Liszt's championship of Wagner gave him the reputation of belonging to the extreme musical left. No doubt he did stand up for modern music. Berlioz, Saint-Saëns, Raff, Rubinstein, Franz, Grieg, and other modern masters found in him an ardent advocate of their claims. He had been one of the first, too, to acclaim Chopin a genius of the first order and to bring his works before the public. But his missionary labors benefited the older masters as well as the new. Bach and Beethoven (whose symphonies he arranged for the piano) had never been interpreted so intelligently and soulfully as by him, and Schubert owed nearly everything to his missionary efforts. Most of his works had been "music of the future" till Liszt took them up and made them popular. He was the most cosmopolitan as well as the most many-sided of all musicians. And while his friend Wagner looked askance at Meyerbeer and Rossini, Liszt was among their ardent admirers, without being blind to their faults.

He was also a man of the world and a clever diplomatist. He was fond of relating to his friends the strategems he had to resort to in order to win success for Wagner's *Lohengrin*. This opera, now the most popular of all the stage works the world over, Wagner himself could not get accepted for performance at Dresden, though he was actually conductor of the Royal Opera. He then appealed to Liszt, who promptly acceded to his wishes. But there were intrigues upon intrigues at Weimar, and the opera seemed almost impossible of performance. The former conductor Chelard informed Liszt that he was simply wasting his time and that *Lohengrin* would certainly prove a disastrous failure. Liszt knew better, but he also knew that the music must be heard repeatedly to be appreciated. So he stipulated that the opera must be sung at least three times, even though to half-empty benches. The result proved the wisdom of his policy. During the first performance many of the spectators left the house. At the repetition, there was a regular stampede for the doors in the second act; and not till the third performance did the beauties of the music begin to appeal to the public. The singers themselves, and the players, had to be cajoled at first. But Liszt knew their weak point. At the rehearsals he had provided tables with good things to eat and drink for the members of the chorus and orchestra during the intermissions, while the soloists were invited by him to a regular supper at a neighboring restaurant. That kept them in good humor and made them submit to extra work without grumbling.

Liszt was not so lucky as Wagner in having a powerful and wise missionary thus laboring for him exclusively for a time. His works, like those of others, have been temporarily overshadowed by Wagner's. But their day is coming. He already ranks third in popularity in German concert halls—coming right after Beethoven and Wagner—and the avalanche will grow and reach other countries. His pianoforte pieces and some of the songs are already tolerably familiar, but most of his symphonic poems are still unknown to the public at large. The conductors are unwise in ignoring them, for they are cordially appreciated whenever properly performed. Wagner relates how enthusiastically two of these compositions were applauded in St. Gallen when given under Liszt's own direction. Liszt, in one of his letters, tells how he conducted the "Preludes" and the "Hungaria" at Budapest. The first, he says, had to be repeated, as the applause would not cease, and the other "had something better than applause—men as well as women were in tears." Walter Bache, after producing "Mazeppa" in London wrote that it was "an enormous success. . . . The audience wanted it again, and would not be quiet until Manns made a speech, saying it was impossible to repeat it." I might cite many other similar incidents, but these must suffice as a hint to conductors and players.

LISZT AND A GROUP OF PUPILS.

PATIENCE WITH PUPILS.

PERCY GOETSCHIUS, MUS. DOC.

Surely, many qualities are essential to the well-equipped and successful educator, but not one that is more essential than the quality of Patience. Indispensable are Knowledge, impartive Tact and Patience, and the greatest of these is Patience.

This every teacher, every thoughtful reader, knows so well that it seems time wasted to repeat it here. But the teacher views the matter, naturally, from *his* side of the case, and seldom, possibly never, thinks of looking into the question from the *pupil's* point of view; and it will not be time wasted if anything can be said that, by appealing to the sense of justice, may render the teacher's exercise of patience easier and more effective.

Every teacher has, indisputably, much to endure from some of his pupils; for many are careless, inattentive, indolent and even constitutionally rebellious. But has the scholar nothing to endure from the instructor! *Whose* fault is it, if the pupil becomes restless, rebellious and finally indifferent, when plied with tasks not accurately fitted to his needs; perhaps much too difficult; imperfectly explained; or, for some reason or other, utterly distasteful to him? The earnest teacher will find the necessity for patience decrease in proportion to his success in making the tasks attractive to his pupil, and this can be done without any fatal concessions. As long as the average scholar finds his work interesting and sympathetic, he will not excite just impatience; and is it not very largely indeed the *teacher's* fault, if such sympathy and interest be not sustained?

I repeat, there are some pupils that no angel could reach or permanently benefit; but they are the exception and not the rule. And when a pupil of ordinary character and aptitude fails to advance and grows discouraged or morose, it behooves the educator of that pupil to ponder the situation most conscientiously and thoroughly and discover whether the fault be not with himself rather than with the pupil.

Passing more lightly over the commonly recognized reasons for patience with pupils, namely, because impatience is unbecoming, and because it merely makes matters worse, I would lay great stress upon the less obvious reason above intimated. For my part, I have often (particularly in earlier years) been arrested, in the heat of a disposition to scold, by the mortifying discovery that the burden of failure rested with me. Gradually have I learned how important it is to fathom the pupil carefully and to select tasks well within his grasp; to explain what lies beyond his intuition so minutely that any subsequent lack of apprehension goes to his debit account and not to mine; to be assured that he understands precisely what and how much he is to do and how he is to do it; and especially to choose that one of the many present phases of the necessary task which is most likely to appeal to his particular taste and disposition, as far as compatible with that other vital condition—the *systematic* pursuit of some perfectly definite aim.

That this demands patience, and a great deal of it, goes without the saying; but it is both more natural and more easy to exercise patience where our personal ambition and self-esteem are involved.

The teacher whose patience is dictated or reinforced by the consciousness that it thus concerns himself, at least to a large extent, will be less likely to misconstrue the true *quality* of patience that is needed. It should not be Resignation, that bridles and silences the impulse of just rebuke; it should not be a spirit of Leniency, of over-generous or possibly cowardly Indulgence that appears to reduce the friction and the need of patience; nor should it be Indifference that steels our nerves and renders us impervious to the temptations of wholesome impatience; nor that quality of patience which Josh Billings, in one of his quaint proverbs (anent the fisherman), thinks he should call laziness. None of these. But an active, vital, vigilant patience that holds all disturbing impulses in check, in order that the mind can secure impartial and unimpassioned judgment; a patience constantly alert to discern the true causes of apparent failure and to operate upon them impartially, whether the blame be found with the pupil or with self; a patience that wastes no energy in undignified and fruitless outbursts, but strikes the nail upon the head with one well-directed and determined blow; not a haughty, frigid patience, but an introspective and thoroughly honest patience.

This is the quality of patience that every educator, who would be a power in the propagation of the art, must exercise with his pupils and—with himself.

A living death was in each gush of sounds,
Each full of rapturous hurried notes.

—*Keats.*

"How divine the law of Nature is, which has so connected the immortality of beauty with patience of industry!"

THE Teachers' Forum

Conducted by N. J. COREY

This department is inaugurated for the purpose of uniting the many teachers who read THE MUSICIAN in a bond of professional brotherhood. It is to be their medium for the interchange of ideas, experiences, encouragement, discouragement and difficulties. The fullest correspondence is invited. The questions will be answered and suggestions given by the conductor and the contributions of those who wish to gain new light or to present their methods will be printed. We propose helping ever teacher who will permit us to do so; we intend to do everything possible to overcome the isolation with which you are burdened. Will you co-operate with us?

No conditions are attached: the department is open to *all* MUSICIAN subscribers. Address all communications to the Teachers' Forum, care THE MUSICIAN, Eighth and Locust Streets, Philadelphia, Pa. Do not hesitate, but be among the first to ask help, or to give some other teacher a suggestion. Let us know what you would like to have treated in its columns.—Editor of THE MUSICIAN.

'The gates of art are closed unto none; who so entereth thereat, though he seeketh perfection, yet shall he not find it."

—Ancient Egyptian Papyrus, 3580 B. C.

WHY THERE ARE FEWER PIANO STUDENTS.

N. J. COREY.

"Musicus" would like to know why there is an apparent decline in the number of people studying the piano as compared with twenty-five years ago, maintaining that there are not proportionately as many students of the piano as then.

At first glance such a question seems surprising and somewhat ambiguous. We are constantly making claims as to the vast advance in musical taste in this country during the past quarter century, and the great elevation of the standard of musicianship among amateur players. Music houses claim that a hundred copies of Beethoven's Sonatas and similar music of a high class are now sold to a half dozen copies in those days. Piano manufactories are, some of them, claiming an output of a hundred instruments a week, all of which must go into homes and someone must learn to play them, and piano factories now number in the hundreds. In face of all this, such a question as that at the beginning of this column appears somewhat superfluous. It would seem as if the number of piano students must have vastly increased, and so they undoubtedly have, and the number of teachers has proportionately increased also. The number of music students was never so great as at the present time. There is music of some sort in almost every home. And yet there is some reason for the question of "Musicus," who is indeed not so far adrift as might at first seem likely. Music study has very much changed in aspect, in some respects to the detriment of the teacher, and in some respects to his advantage. It must be remembered that the population of the country has enormously increased during the time stated, and therefore any remarks made must be understood as proportionate. Although there are in reality many more students, yet there does not seem to be so many. Twenty-five years ago almost every young lady seemed to be playing the piano, while not so many were paying any attention to singing. Now it is the general impression that it is the singing teachers who are overcrowed with pupils, while such is the case with but comparatively few piano teachers. There must be some cause for the change and transference of interest. Among the children there are doubtless as many piano students as ever, if not more. But such is not the case when these children have grown up.

In my own mind the cause for this is not far to seek. It is to be found in that much vaunted raising of the standard of taste which we are working so hard to cultivate. One would think this would increase the ranks of piano students, but it has rather had an opposite effect, incredible as it may seem. The cause lies in just this, that now people will not tolerate the sort of music that was the standard of excellence a quarter century ago, and the average pupil finds the task of pleasing a far more exacting taste a much more difficult one than formerly.

Twenty five years ago the standard of taste was represented by such pieces as the "Maiden's Prayer," and the "Mocking Bird," two pieces that many of the present generation have never heard, nor even heard of. But a few years ago these compositions represented the acme of excellence, and a young lady who could play them was considered a finished pianist She had graduated, and had nothing farther to learn. She was the envy of all her aspiring younger friends. An evening gathering that was obliged to disperse without having heard the "Mocking Bird," was almost a failure. At all "socials," when the time came for music, it was the "Mocking Bird." When a person was asked in regard to his or her music, the question was invariably—"Do you play the Mocking Bird?"—or the "Storm," another equally indispensable piece to all accomplished players.

Now, while these things were pretty and tuneful, and required a certain amount of finger facility, they were far from the class of music described by dear old Dr. John on as devoutly to be wished "so difficult as to be impossible." Imagine them beside a Liszt Rhapsody or a MacDowell Sonata! One might easily hope to climb to the top of one's art as recognized at that period, and not be reckoned absurdly ambitious. A few years study and practice, a few appearances in concert, and one was ready to be turned loose upon the public as a finished art product and a competent teacher! The long and arduous preparation and the high standards of Europe were comparatively unknown. Foreign travel and opportunities for culture abroad, were confined to the privileged few, and only those living in a metropolis could hope to hear all the great musicians who came to us. Indeed, not nearly so many came, for the rewards were small, and the appreciation smaller.

Just here, a word might be said for what it means to a sensitive musician—and all good musicians are sensitive—to appear before an unsympathetic audience. Unsympathetic, principally, in America, from lack of educational opportunity. So great is the strain of alien conditions that many artists prefer much less money, and a congenial environment, to the possible rewards of an American tour. Europe still keeps well in advance of us in art, and retains the best models in every branch. It must be so. An old civilization, with government subsidies, naturally leads a new, restless, as yet somewhat chaotic evolution, where everything depends upon private enterprise, and fortune is often in the hands of the uncultured. In Europe the conditions are made, here, with us, they are in the making. But we have evolved enough to be no longer content with our former standards. Foreign travel and outside talent have helped us to ascend, if not to lead. The piano student to-day, has to listen to Paderewski, and Joseffy, and Stavenhagen, and to realize that the point of excellence to which these players have attained is the forward mark at which all students must aim. We begin to understand that art is not for a month, nor a year, but a lifetime; that study is not an affair of graduation after a brief course. The sentence, "to learn to play the piano," is vital with new meaning in the twentieth century. And the consequence is, that many are deterred by lack of talent, or means, or opportunity, from entering upon so arduous an undertaking. And it is an excellent thing that this has come about. For we had too many pupils and too many teachers, of a certain sort. The advancement of art in America has been said to depend upon many extraneous things, and can be fostered or checked by these things to a certain extent. But the real soul of the matter—the vital tissue of this advancement—lies in the quality of brain material worked up in it. It is untrammeled intelligence which is the real and godlike gift of a free country to its people, and it is this intelligence applied to old problems, which has enabled Americans to solve so many of them satisfactorily. When the finest and highest type of American gives him or herself to art, the impetus will be lasting, and results achieved as wonderful and astonishing as those in commerce or mechanics, or upon the battle field. "Musicus" may rejoice and be glad if the ranks are being, not thinner, but weeded. We may have less in quantity, but far more in quality. And when we consider the reward of patient endeavor attainable to musicians in the present stage of American development (how little can be made by any of us comparatively, however constant our labor, and complete our consecration, and abundant our enthusiasm), I think we shall feel that the man who deliberately chooses music for his life work should at least be held in the esteem Agassiz was when he declared that he had "no time to waste in making money." We builders now are not so very far from the foundation, and will know little of the joy of the decorators and finishers who will follow us. But we are being recruited from better and better material. The study of the piano will not decline; indeed, its orchestral capacities are still undeveloped, except in rare and highly cultivated players. There are new worlds to conquer, and there will be many to attempt them, and the calibre of those making the attempt will be of a nature commensurate with the high order of its demands.

Too much stress cannot be laid upon the fact, or rather truth, that piano playing should be taught harmonically and the pupil be made to write from the very beginning. Imagine a school in which reading is taught without writing: the pupil left without any capacity to express a mental image while being taught to form one! Yet this is precisely what ensues when pupils cannot write. To make the scales as one learns to play them, to learn the value of notes and rests, and the meaning of all primary definitions as to staff, measure, etc., by writing and rewriting, to add common chords to scales, etc., and so at every step of the way on and up, to have and to hold definitely and tellibly, or rather transmitably, every particle of one's knowledge—this is really to master thoroughly. All this seems simple and obvious enough, but first principles are always simple to those who have progressed beyond them. Axiomatic truth seems almost too true to need statement; yet axiomatic truth, to those who have not apprehended it through scientific application, is absolutely a mental impossibility. A slight review of what the preliminary statements of algebra or any exact science conveyed to us when we began the study of them, will explain my meaning. The first principles of American art are embodied in these things. For an art demands a school and a school demands composers, and a composer must write. Merely being able to render the great thought of others is not enough. It is essential, for without it, the crystallized genius of bygone centuries could not be made soluble, and become the portion of those to whom we play the great compositions which are our noble heritage. But when we pass, what is to be left to represent our period? Is there to be a blank opposite our names and places? Are we to figure as the age does in literature, for instance, that succeeded the Elizabethan? It is not to be supposed that the sacred fount of inspiration is a sort of Vesuvius, subject to internal convulsions periodically. It is more reasonable to infer that no one can go on living amid the thoughts of genius without coming to have kindred ideas; and that all very good players and musicians have more or less ability to compose. Were writing taught us as early and as carefully as it is to the Germans, we should have a school of art, for the American tends to expression from the very freedom of intellectual atmosphere before spoken of. Granting even, that only a proportion of players will write, who can tell upon which of our pupils the mantle of Elijah will fall? And even if universal facility of expression should lead to what George Eliot calls "unnecessary authorship," there will be no serious harm done Indeed, it is the standard of comparison which establishes value; and so the veriest dullard serves his purpose, if only as an antithesis to Shakespeare. Good, better and best, are obtained by contrast with bad, worse and worst. It is all a question of degree. Let us then endeavor to give to every man, as far as lies in our power, the ability to enter upon his most valuable possession—the full use of his faculties, and their best and highest transmission. The piano, so taught and so studied, will not decline in eminence of musical position. When the player is taught to *think*, and to express an original personality, there will be a stamp upon his work which will arrest and hold the attention of both the trained and the untrained ear. For the power and the consequent dominance of mind is something which makes itself felt universally. It is apprehended by even those who are unable to understand it, but who are dimly conscious of being in touch with something greater than themselves, to which they are yet in some sense akin. Standing in the gloom of that twilight of the gods which we call Ignorance, they are awed by

unseen presences—they are moved to reverence what they scarcely discern. An intelligent pupil, in the hands of an intelligent teacher, may hope to hold and inspire both the classes and the masses through an appeal to the cultured and the dormant intellectuality which his mastery of his instrument will give him. The only real decline in piano playing will be a decline in the quality of the pupils and teachers. Of this, we need have no fear. It is my confident belief that the present century will show as marvellous results artistically, at its close, as the one just past has shown in commerce and mechanics. To which I add the pious wish, which can scarcely be granted, that we may all be here to see the delightful consummation!

PIANO PLAYING IN PUBLIC.

JAROSLAW DE ZIELINSKI.

Piano playing may be considered from two sides, mechanical and emotional. A young student who has studied in a perfunctory way a lot of Czerny served up by his teacher, lands finally on one or two *morceax de bravoure* which, after a long struggle, he succeeds in playing at a public exhibition. It goes without saying that the mechanical part of the performance is bad, while the emotional side, the ability to comprehend and interpret the inner meaning of the work, whether it is a transcription by Boscowitz or a fantasie by Jaell, is absolutely wanting. But what else could be expected from the youthful prodigy (?), when the parents themselves think that "two bits" per hour, once a week, is a "good enough price for lessons to a beginner;" and so the musical taste of the promising youth goes steadily to waste as well as his other tendencies which are trained from the start to consider the cheap article practically as good as the more expensive one! To be sure, that by means of constant study and merciless labor for a lengthened period, any piano student may acquire great finger dexterity, and become even a piano virtuoso; but that would not make of him a musician; he would have merely learnt to play the piano!

However, there is an intelligent class of piano students who do their work with good teachers; not such as, according to the report of the oldest settler, "used ter play fine, only haint had no time of late years ter practice;" but who study with teachers who do play, and know how to do it most acceptably before large and critical audiences in which personal friends count for very little. Such playing requires first, solid technical work, then a certain amount of emotion; the student, if at all ambitious, listens to the work of the master, and in a short time learns to shun with horror the miserable bungling performances of third rate amateurs who should confine themselves to entertaining their near relatives at home.

It is a well-known fact that nothing of importance can be accomplished in this world without being worked for, although I did hear the other day a young woman (of goodly proportions and apparently possessing a sufficiency of gray matter) tell a younger friend that she never took but one term of lessons on the piano (present age about 26), but that she "could play anything;" that means everything from Bach to, and beyond, Liszt! In the average drawing-room where Sousa's marches and Wiggins' two-steps are the limit, "playing anything" may have some shadow of a meaning; but outside of those soda-water places it may be well to consider that pianism is viewed quite differently. First it was Bach, then Moscheles, Chopin, and finally Liszt; the latter created so many hitherto undreamt of things for the piano that it is not easy to find a pianist whose art is so great, so wonderful, as to enable him to do justice to all composers, regardless of the difference in their styles. If, like Carl Reinecke, for example, he has devoted himself to Mozart, there is an inconceivable charm in his reading of a sonata by that master; for the requirements are technique, a fine singing legato, a crisp, pearly staccato, and, withal, intelligent phrasing. Such playing, combined with the emotional is the golden axis called by some "musical expression." In Anton Rubinstein, who to begin with had a marvellous technique, there was power, feeling and passion, and he smote the piano players, even as Samson did the Philistines; yet he was strongly dependent on his disposition, and if he did not feel like playing, the audience had to suffer. He played Schumann, Raff, Beethoven, or whomsoever, just as he himself understood them, and while such license could hardly be placed in the hands of every player, with Rubinstein it was the outpouring of a magnificent genius. Widely different from him is Vladimir de Pachmann; there is technique again, but clothed in velvet, and his soft, sweet tone produced with that caressing hand of his, makes of him a Chopin player *par excellence;* he can also play a Bach fugue or the Schumann toccata, though not like Arthur Friedheim of the iron touch and marvellous technique! This touch and technique are admirably suited to the style of music he plays (Liszt, Rubinstein, Schumann), but this style is different from that requiring the deep conception so indispensable to the playing of the great classics.

Genius is sometime—but not often—developed without the direct aid of science, but more often does a scholastic training become simply invaluable when pursued by one of talent as a *means to an end.* Thus mechanical exercises requiring great exertion and concentration of strength in slow practice, will strengthen the muscles of the fingers; while much time given to exercises which perfect touch, kindle and musically refine the imagination, cultivate the sense of form and promote the knowledge of rhythmics, must develop a reverence for the masterworks in musical art; and if the bump of reverence is stronger than that of conceit, we get beauty as intended by Schumann, Chopin, Rubinstein, or any other composer, and not *bizarrerie.*

In all art works and their performance there is something that is called repose, which constitutes the true test of genius; a pianist's work may have merit, but still lack repose; that is, equality of individual tones, a correct blending of tones, and a correct movement. To the mechanical work belong the most difficult combinations of runs or arabesques, trills, double-notes, chord-successions in rapid tempo, and most startling octave passages; but after all they are only an empty display of a brilliant technique. Blend, however, the technical detail with the emotional which embraces repose, and we have artists like Eugene d'Albert, one of the best Beethoven players of to-day; to be sure, his touch may not possess the fascination of some, but it is free from exaggeration, and always in sympathy with the composer's intentions. The old masters have left no especial instructions in regard to the manner they intended their works to be played, no doubt considering it safe to intrust their inspirations to the care of conscientious artists; and great is the player who, instead of being bent on compelling us to accept his individuality, causes us to receive with gratitude the natural cheerfulness of Haydn, the humor and semi-oriental fervor of Mendelssohn, the deep romanticism of Schumann, the dreamy poetry of Chopin, or the melancholy gloom of Beethoven.

I have in my mind a noted pianist whose Chopin playing is good, full of rare delicacy and ease of execution, but it is almost totally devoid of passion and fire; yet the same artist plays some things of Liszt and Moszkowski in a manner that is really entrancing. No doubt that the clearness and delicacy with which every note is articulated (and this is technique, or the mechanical side of piano playing) is at the bottom of this charm. Some pianists consider it their duty to play Schumann's Etudes Symphoniques, just because the other fellow plays them; they err in this as they do in their playing of Beethoven. To play these two giants one needs more than finesse and technique: grandeur and fire for the former, and character for the latter are the *sine qua non* equipments without which these two masters might as well be left alone. Whenever I hear a player tackle Schumann's Etudes Symphoniques, playing the different variations almost absurdly slow, especially so as regards the finale, I always wonder why he does not try next Chopin's Opus 60, for "mortals rush in where angels fear to tread." This Barcarolle is one of Chopin's greatest compositions, and one of those works which requires absolute technical and emotional power to make the immense difficulties fade into nothing, revealing only a perfect tone-picture.

Thus it is not merely a question of manual labor and grim determination, but also of infusing a work with warmth, passion, fire, enthusiasm—and above all possessing temperament! Without temperament piano playing falls flat, it fails to carry us away; it may be good, correct, deserving praise, but nevertheless it is flat. There are some who may object to this view, refuting the emotional element entirely, and preferring the calm, cold manner; but just the same, uncertainty of expression is about the worst thing that can be known of a performer.

Having spoken of the playing by leaders in the profession, something must be said of the *dilettanti* who, if not overestimating their own resources, will agree with Lord Bacon who says, that "knowledge which is drawn from particulars, entereth more easily into particulars again." This, of course, is true in regard to technique, which if properly developed will enable its possessor to enter deeply into the secret beauties of his art, and acquire the pleasure of "true artistic rendition." Exercises and scales practiced for gaining merely dexterity and celerity of manipulation will not teach expression, any more than the brain can by its own occult power produce its emotions upon the keyboard. These musical emotions—being physical and psychological qualities forming a distinctive feature in the effort to produce them—are subject to the mental, muscular and nervous action of the player; a perfect control of these brings even the young to an early realization of the possibilities of the æsthetical and intellectual in piano playing.

Consider carefully correctness, which among other things includes a strict observance of rhythm; be intelligent, and if you have a sensitive heart enter into the spirit of the piece that you play; a bravoura etude of Moscheles is not like a nocturne by Chopin, Field or Cui; nor is a Tyrolienne by Wely like a mazurka by Chopin or Liadoff. The one tickles the fancy, the other charms the intellect. The flashy (!) player has no use for a dreamy movement which lies well under the fingers; it offers no opportunity for gymnastics, and its qualities are such as he cannot comprehend; when displayed by others he calls them "mannerisms" or "sickly sentimentality."

Consider the composer, and if he asks you to play "with great expression," do not make it an occasion for displaying the looseness of fingers and wrist; there is no better test of a player's fitness for his work than a slow movement, and if you know how to sing it soulfully at the piano, the worst backwoods town will listen to you with respect and admiration; it is not always the jingle of dance tunes that catches the masses.

Ye flaming Powers, and winged Warriors bright,
That erst with music, and triumphant song,
First heard by happy, watchful shepherd's ear,
So sweetly sung your joy the clouds along
Through the soft silence of the listening night!

—*Milton.*

A TRUE INCIDENT.

Mr. Van Cleve, in his article, "The Triple Aspect of Music," says: "My Lady Lou really has a touch of sweetness in it." So thought one of my brother organists, prompted by the same (?) broad view expressed by Mr. Van Cleve, but alas, without his nice discrimination of time and place. He, the brother alluded to, is choirmaster and organist in one of the largest of our churches and holds his place in the hearts of the congregation by giving them the music they like. In his choir is a pupil of mine with a beautiful contralto voice, whose musical taste I have as carefully trained as her voice. After a few months' engagement in his choir she began to be very hard to please in the choice of her songs, objecting to my taste as being "above the heads of the people."

One day a member of this church said to me: "Did you teach Miss P—— the song she sang in church Sunday?"

"I don't know. What was the song."

"If she were not your pupil I should say it was ragtime."

When Miss P—— came in later I asked her what she had sung, she replied: "Something in manuscript the Professor asked me to sing. It seemed to me a rather silly setting of 'Jesus, Saviour of My Soul,' but everybody seemed to like it."

A few days afterwards the Professor confided to me that it was "My Lady Lou!" but "*played in a sacred* way!"

I should say this incident fulfilled the three sides of Mr. Van Cleve's triangle. It was an "amusement" to those who knew the tune, on "educating" down to the heads of the people (alas, that there is such an education) and a spiritual "exaltation" to the blissfully ignorant preacher who thanked the singer, with tears in his eyes, for the song which was so "appropriate to my sermon."

C.

Were it not for music, we might in these days say, the Beautiful is dead.

—*D'Israeli.*

"The great purpose of Music, which is to say a thing that you mean deeply, in the strongest and clearest possible way."—*Fors, ix, 15.*

THE MUSICIAN.

A Monthly Publication.

PUBLISHED BY
HATCH MUSIC COMPANY.

SUBSCRIPTION PRICE.

SINGLE COPY . . . . . $ 15
PER YEAR 1 50

Free of Postage in the United States, Canada and Mexico. Foreign Postage, per Year, 72 Cents.

Remittances should be made by Bank Draft or Check, Post Office Money Order, or Express Money Order. *Where none of these can be procured*, money can be sent in a Registered Letter.

New Subscriptions can commence at any time during the year.

Discontinuances.—The publishers should be notified when a subscriber wishes his paper stopped. In the absence of written notice to the contrary, subscriptions will be continued.

Communications are Solicited from all interested in the teaching and study of music, and in furthering the success of THE MUSICIAN. All articles or communications intended for publication should be clearly written on one side (only) of the sheet. Those which cannot be used will be returned.

All Letters should be addressed and **Remittances** made payable to

HATCH MUSIC COMPANY,
Publishers of THE MUSICIAN,
Eighth and Locust Streets, PHILADELPHIA, PA.

The Publishers of THE MUSICIAN do a General Music and Music Publishing Business. They can supply anything in Music.

THE MUSICIAN AND THE MUSIC TEACHER.

A long time ago Byron said: "The best of prophets of the future is the past." The truth of this assertion is manifest, and it is a particularly valuable augury when a succession of years has been productive of a steady forward movement, a constant increase in efficiency. With this issue, THE MUSICIAN closes its sixth year, and both editor and publishers feel they can confidently assert that the six years have been characterized by a steady progression toward better things.

●

If Byron's words be true, a recapitulation of some of THE MUSICIAN's achievements during these years is in order. Taking up its work at a time when interest in music study was steadily growing, it determined to make its policy practically educational, and to this policy it has adhered. In developing this educational policy, it has put into practice a number of features that had not before been offered to teachers and students.

●

First, it was determined that all classes of musicians should find its pages helpful. Second, it sought out and attached to its interests a class of writers whose experience and endowments made them valuable mentors for students. Many of these writers it introduced to the musical reading public. Third, it was not content to move along the same old lines, and it set about systematizing the subjects of interest to musical readers, and began carefully arranged and definitely planned courses of reading and study, in which every vital point would be emphasized and the unessential relegated to the background. Out of this grew the first collegiate course of study ever offered by a music journal to its readers. The *New Education* has brought into many homes and studios real instructions in the essentials of music work. BIOGRAPHY, both of the Masters and Moderns; The MASTERY of TEACHING MATERIAL; Studies in HISTORY, FORM, HARMONY and MELODY, DEVELOPMENT OF THE PIANO, MUSICAL LITERATURE, PEDAGOGY, and other subjects, have been placed before readers of THE MUSICIAN in a way to do them the greatest good.

●

In addition to these special studies, its regular departments have presented throughout the six years, an immense variety of matter all of which has been chosen for its real value. THE MUSICIAN was the first journal to recognize the claims of young readers, and its CHILDREN'S PAGE is used by teachers in their class work with their younger pupils. Women's Clubs turn to its WOMAN'S PAGE for suggestions and advice. In the matter of illustrations, THE MUSICIAN first made a feature of them.

●

Accepting Byron's statement that the past is the best prophet of the future, musicians and teachers can be assured that THE MUSICIAN will not only maintain its standard, but will reach toward still higher ideals. Indeed, the editor is able to say that plans already consummated promise a still greater advance during the seventh year than has been made at any time in the journal's history. Writers are being secured to prepare articles on special subjects, the departments will seek to get still more at the root of technical, interpretative and pedagogic problems. The children will be aided in their studies and the teacher of elementary grades will find unusual help through the interest aroused among the young pupils and in the articles which will be contributed on this phase of music teaching. The *New Education*, announcement of which can be seen elsewhere, will be devoted to ELEMENTARY TEACHING. Particular care will be exercised to make this year's study a most emphatic assistant of the teacher of children.

●

Of the subjects announced last December, a very large number have been published during this year, in many instances several articles being contributed on the same subject. Articles on the others are being received and will be printed during the coming year. In fact, some of our strongest writers will discuss these subjects during 1902.

●

In view of these facts, we announce that THE MUSICIAN for 1902 will more than ever be the music teacher's assistant. Each issue will be planned and completed with this object in view, and in all its departments it will be made practically helpful, an inspiration and a means of intercommunication between moulders of musical thought and the body of earnest workers who are doing yeoman service throughout the land.

FREDERIC ARCHER.

Frederic Archer died at his home in Pittsburg, Pa., of cancer of the stomach, on Tuesday, October 22.

We have grown to expect that all musicians of eminence who, coming from another country, make their homes with us, are Germans. Frederic Archer, an organist and musician of sterling attainments, came to this country in 1880 from England. He was born in the city of Oxford, famous for the great university, in 1838. He received his literary education there, and was a precociously musical boy. At nine years of age he could play well. He became a chorister at Margaret Chapel—now All Saints Church—London, in 1847. Returning to Oxford five years later, he was appointed organist of St. Clement's Church and also of Merion College Chapel. After study and travel, he entered fully upon his life work. In 1862, he gave daily organ recitals at Albert Hall and Crystal Palace, and made tours of the chief cities of Europe.

In 1863, he became joint conductor with Sir Julius Benedict of the London Vocal Association, a chorus of 400 picked voices. He also became a lecturer at the Royal Polyclinic Institute. After various appointments, he became organist at the Alexandria Palace, where he gave 2000 recitals on the great organ, without once repeating a program. His audiences frequently numbered 20,000 people. Later, he took entire charge of the musical affairs of the establishment, conducting the daily popular and classical orchestral concerts, the monthly festivals (with orchestra and a chorus of 2000) and weekly operatic performances. He was also examiner in Glasgow University.

In 1880, when the Palace was closed, he came to America, and after a short visit to London, took up his permanent residence here. He was associated with Henry Ward Beecher at Plymouth Church, Brooklyn. He gave ninety-two recitals in New York, at Chickering Hall. His musical labors in this country have been numerous and important. He founded a music journal; in 1887 became conductor of the Boston Oratorio Society, giving the first performance of Gounod's "Redemption," in this country. He also held positions in Milwaukee and Chicago. In 1895, he removed to Pittsburg and took charge of the musical activities of Carnegie Hall. During the performance of his duties as city organist, he played (up to 1898), 223 recitals, giving 1,365 important works, 623 being organ compositions and 742 orchestral transcriptions.

In 1896, he founded the Pittsburg Symphony Orchestra, now under the direction of Victor Herbert. He also gave a large number of lectures on musical subjects. As an organist, he had great technical ability and was careful to interpret the composer's meaning. His broad musicianship made him master of legitimate orchestral effects, and his registration was remarkable. He was a writer of some distinction, publishing an organ school and contributing to Grove's Dictionary of Music and Musicians, Scribner's Cyclopedia of Music and Musicians, Riemann's Dictionary, and other works.

Mr. Archer won a high place in American music life by ability and increasing activity, which, after all, are the keys to success in all cases. Pittsburg has lost a valuable musician, whose influence extended beyond the confines of that pushing city.

HERO WORSHIP.

The tendency of human nature to elevate, to a high degree of sanctity, the belongings of those who have won eminence is so widespread as to make allusion to it exceedingly trite. The most unimpressionable of us are inclined to feel little thrills traveling up and down our bodies when we enter into the presence of something that has been familiarly associated with famous persons. Visitors to Cambridge, Mass., will stand almost reverentially before upright slabs of stone on which is written the commemoration of some noted event in American history. And as they pause before the Washington elm, so named because under its branches Washington took command of the Continental Army, perhaps the strongest impression, after curiosity is satisfied, will be that which comes from the strong wire surrounding the tree to prevent its being carried away piecemeal by relic hunters. That Americans, whose patriotism it should be supposed, would protect everything that stimulates memories of courageous deeds and patriotic events, must be prevented from destroying an historical landmark is a forceful commentary on human nature. Yet the apologist can find excuse for the desire one may have to possess some token of an important event.

●

The musician is not unlike his fellow-mortals, and is often made the butt of jokes because of his tendency to hero worship. Apropos of this thought is the following, reprinted by the *Musical Record and Review*, from the *Signale*. Under the caption of Bayreuth Luxuries some exceptionally enjoyable things are offered. The list is as follows:

"A bed in which it is guaranteed that the singer Niemann slept, twenty-five years ago, per night, 50 marks.

"The same on the night of the Jubilee, 25 marks extra.

"A bed built in exact accordance with the Master's direction for the Brunhilde rocks, per night, 65 marks.

"A room with a window looking in the direction of the tree-embowered Villa Wahnfried, 100 marks.

"A room similarly situated but without a window, 50 marks.

"A quart of mead served in a horn like that used in the "Gotterdämmerung," 7 marks.

"A portion of goose (a la "Lohengrin"), 5 marks."

The sarcasm of this excerpt is a merited rebuke to a tendency unduly to worship heroes and their belongings, which we may well ponder.

With the Christmas number of THE MUSICIAN, editor and publishers send holiday greetings, with the hope that each reader of the journal will find it helpful and encouraging, and that the coming year may be the best of his or her professional career.

THE NEW EDUCATION.

ARTHUR L. MANCHESTER, Editor.

ANNOUNCEMENT.

Again we have reached the close of a year's study. More has been left to the student during the present series. There have been fewer questions, and a consequent greater necessity resting upon the student for self-examination. This has purposely been done. The four years of work preceding this should have given our students an independence that enables them to make conclusions for themselves.

It would be interesting, and instructive also, if we could examine all our students in the work done during the entire course of *New Education* work. This is not feasible, but we would very much like to know what has been the gain to those who have persisted in the studies. It is certain that no more valuable opportunity has come to teachers and students generally than that afforded by the *New Education*. And it is equally certain that if there has been no permanent gain the burden of failure must rest upon the students.

With the close of this series the work in its present form is concluded. In the January issue the *New Education* will continue on lines very similar, yet with some modifications. The questions will not accompany each instalment, and while the articles will be so written as to permit of questions at stated intervals, their chief aim will be to furnish assistance in the daily work of the teacher of children. To this end subjects, writers and method of development have been most carefully selected. The general topic will be "Elementary Teaching." The sub-divisions are as follows:

I. Kindergarten Methods and Their Applications; twelve articles.
II. Teacher and Pupil—A Pedagogic Relationship; twelve articles.
III. The Child and His Music Study; twelve articles.
IV. Music for the First Three Grades; twelve articles.
V. The Teachers' Self-Development; twelve articles.

These subjects have been placed in competent hands, and our students may be assured that the year's course will prove unusually helpful to them in their teaching. No pains will be spared to make it the best of the entire series. The articles will be supplemented by readings from outside sources, and correspondence is invited to the end that the fullest amount of good may be had.

The rules under which the work has been carried on heretofore, will still hold good. While papers will not be sent in each month, all correspondence will be subject to these conditions, and when the questions are answered the papers should comply with them. They are subjoined for the sake of clearness.

1. Address all communications for the *New Education* Department, thus: THE MUSICIAN, New Education Department, 8th and Locust Sreets, Philadelphia, Pa.

2. *Do* NOT *roll your manuscript.*

3. The answers must be sent as soon after the issue of the journal containing the questions to which they relate as possible, and before the next succeeding issue. No papers are to be held until end of course. New members can join at any time by sending names and answering questions contained in current issue.

4. Write only on one side of the paper.

5. No two subjects should be written on one sheet. All sheets pertaining to one subject should be independently fastened.

6. Write name and address on back of *each sheet* of paper.

The questions are intended to suggest a thought beyond the mere expression of the words in the text; the highest purpose a question can serve.

The editor will welcome letters from teachers which contain:

(*a*) Suggestions as to what will make this department more valuable, the suggestion being dictated by the teacher's individual experience.

(*b*) Statements regarding the application of this work with pupils as well as in one's own effort to secure a broader education.

(*c*) If there is any line of thought of practical value to you, and likely to be equally practical to others, let us know it.

(*d*) All such suggestions must be sent to the office of THE MUSICIAN, addressed according to direction given in regulations.

[NOTE.—*New Education* students are specially requested to avoid enclosing *anything* relating to their business with the Hatch Music Company with their *New Education* papers. The failure to comply with this rule causes great trouble. Kindly keep this matter in mind. We wish to call the attention of our students to the necessity of *fully prepaying postage on their papers.* We have been compelled to pay additional postage on a large number of those already received. This should not be, hence we request our students to take care that sufficient amount of stamps be affixed before mailing.]

The names of those to whom certificates are given for the work to this date follow.

L. P. Dobbs.

THE ARTIST-TEACHER.

WILLIAM WILSON.

What is an artist? it may be asked. The word is variously employed. Some use it to describe a painter. With others the word artistic classifies people who prefer ancient to modern furniture in their homes. As often as not it merely means that they have done away with one conventionality to substitute another; they have got past the ingenious burgess stage, but have fallen instead into the pitfalls laid by what they understood to be the higher education. They are held to live an artistic life, when the only evidence is that they have overfilled their houses with bric-a-brac, that their pictures are a mixture of passably good and very bad, that they have amongst other curiosities a library of books encased in bindings of a kind that absolutely forbids an approach to intimacy. It is even possible that there may be some who attend Symphony and Quartet concerts with hope no higher than that of being classed as people of artistic tastes. Here, however, it is well to draw the distinctive line; for some occult reason or other, the word is not commonly used to describe the conditions that surround the musician, the poet, or the "litty rat." They are seldom accused of being artistic.

An artist in the fullest sense, that implied when we say, "Ah, yes; so-and-so is an artist," is an enthusiastic doer; rightly or wrongly he believes that, as Schubert said: "Er kann 'was." He cannot get along without the faculty for taking pains, nor is he complete without the quality left out when it was said that genius is that faculty. He must have gifts for the work he takes in hand and for learning the use of means to attain his end. He must have a number of minor advantages, the gift of not enjoying his ease too much in his inn, the gift also of not enjoying it too little, yet of paying some attention to his health, of paying also his way if he wishes to have it clear; in fact, it is well for him if he does not realize at first how many qualities he is expected to possess. One thing, however, he speedily comes to learn and that is, that although he may have his pleasures, they are not in the same direction as those of other people, they chiefly lie in his work which demands his whole attention; he must live for it and it alone. He is naturally liable to be misunderstood. There are times, of course, when the conditions are apt to become too many for him; on such occasions he has a genial custom of kicking over the traces; but on the whole, he sees his end, sees also that it is unattainable, yet strives toward it with all his power.

Those who have looked for him in various fields have found him to be a rare bird indeed. They can think of cases where his gift was clear enough if only there had been capacity for endurance, of some where endurance did much to atone for lack of gift, of few that combined the two in sufficiently strong, decided way to ensure them fame.

Teaching is one of the experiences that artists usually undergo, for they are not always possessed of money and still more rarely of the faculty for keeping what they have. There are those who are unfitted for teaching, who take to it unwillingly, because the need for money presses on them. They are apt to continue unwilling, and become the merest hacks in consequence. The teacher who loves his work is rewarded, for in striving to know another, he learns to know himself. The wise parents are reputedly those who teach their own children and learn to profit from them.

In the profession of music the element of lesson giving always was an important factor; even the undoubtedly successful public player would appear to be tending more and more, as years go on and the nervous strain of modern life increases, to devote to it at least a portion of his time. Of these the two chief examples in recent years have been Franz Liszt and Theodor Leschetizky.

Although of the numerous pupils of the former, several have written about his teaching, Liszt the man is on the whole more familiar to us than Liszt the teacher; we therefore incline from knowledge of the one to form an idea of what the other must have been. His genius cannot be said to have lain chiefly in the direction of imparting what he knew; he probably succeeded more in inspiring his pupils with the desire to play than in giving them practical information on the subject of how to do so. The knowledge he received from Czerny he used in his own way—his respect for him as teacher was unbounded—but, without in any way seeking to depreciate his influence, it may be said that, broadly speaking, in his relations with those around him he himself was more the genial artist than the pedagogue. Leschetizky, if less conspicuously a musical figure in the world, is in one respect unique—he possesses, in a supreme degree, the unusual gift of teaching—when he encounters a pupil with an equally powerful gift for being taught, he obtains results that attract attention. Even those who study what they are pleased to call his "method," in vain, do not leave his sphere of influence entirely without profit; they have better fingers than they started with, though they have not learned how to use them. If an absolute ignorance of the subject entitles one to speak, it may be suggested that this is more a characteristic of his influence than of that of any other living master.

Leschetizky abundantly satisfies the one test to be applied to the artist-teacher; he knows his subject thoroughly and he seeks to impress it in all its ramifications upon his pupils; he has no secrets; what he knows he tells most freely; indeed, he touches in this, as it seems to me, the very highest mark, for his very naiveté in so doing is proof that the act is less a thought than a felt necessity. He may have his moods (it would probably not be overstating the case to say that he certainly has), but efficient piano playing to him is all in all, and I cannot think that those who have appealed to him as artist have ever found him wanting.

It is not suggested by this that either Liszt or Leschetizky, or any one else, would think it worth while to impart unnecessary information to pupils of the rank and file. Students inspiring possibilities are rare—there is an abundance of those who have gone through sufficient tribulation to justify them in their own opinion in calling themselves pupils of Leschetizky—there are a few of the other kind.

The man who has closely connected himself with any form of art study, is the one of all others who knows that its possibilities are unbounded. He has learned to keep the wide horizon; he would as soon think of having secrets from those he taught as he would of denying, or even failing to acknowledge his complete indebtedness to those from whom he learned. The one who is capable of either, whatever his success may be, has determined for himself the place he will hold in the estimation of those who respect the title artist, and hold it to mean something noble, something dignified, something which implies that mere vanity, mere desire to pose will be held back, will in fact, be set aside by the better satisfactions that it has to offer.

QUESTIONS ANSWERED.

[Under this heading THE MUSICIAN will be pleased to answer any questions submitted by its readers which may be of general interest. *All questions must be accompanied by the full name of the questioner.* Answers will be published without such names. Those who send questions should take care to state clearly what information is wanted. Only such questions as will be of interest to general readers will receive attention in this column. All others will be answered privately, for which purpose stamps should invariably be enclosed.—ED.]

O. H.—Notes marked with a bracket, as in the following example, are to be played with the same hand, although the two notes may be in different clefs:

M.—The violin strings are tuned G, D, A, E. When the instrument is held in the natural—or 1st position—the forefinger, when correctly placed, will produce the sound A from the G string, the next finger will produce B from same string, and the third finger will produce C, and in similar fashion on all the other strings. If the hand slides slightly along the neck of the instrument, the forefinger will produce the sound B; the next finger C; the next D. This is a new position—the second. If the hand moves farther along the neck the forefinger will be in position to produce the sound C—the other fingers following as before. Thus we have another position—giving increased control of the fingerboard. Each shift of the hand toward the body of the instrument gives a new position.

L. O.—Massenét wrote an opera entitled "Don César de Bazan," which is the same theme as "Maritana," by Wallace. Spohr wrote an opera on incidents from "Faust," but it was not long-lived, and now is unknown. Schumann wrote music to words from "Faust," but not in operatic form.

Francis—The left hand is indicated by the letters L. H. (English), M S. (Italian), and M. G. (French): The complete terms are, left hand; mano sinistra; main gauche.

Maris.—Mendelssohn died at the age of 38 and Mozart at 35.

Fino.—The Serpent is an obsolete instrument made of wood, having a cupped mouthpiece similar to a bass trombone. The name was derived from its peculiar shape. It is said to be still in use in old French churches, altho' discarded in orchestras. Mendelssohn, Rossini, Verdi and Wagner have written for the instrument.

Florence.—Thalberg was one of the few prominent musicians whose career was in an atmosphere of wealth. He was the natural son of Prince Dietrichstein; born in Geneva, 1812. His success as a pianist was phenomenal in Europe and the United States. His compositions numbered ninety. For a numher of years he lived at Naples—as a wine-grower—and died there in 1871.

Tournoi.—The Erard harp takes its name from the original maker Sebastien Erard, or Erhard as it was originally, who was born at Strasburg, 1752. The first piano made in France was the work of his hands—he also invented the double action for the harp—this was in 1811. The fine repetition action for the piano has made him famous throughout the musical world, and the instruments from the great Erard factory have no superior. He was 79 when he died at his *chateau* near Paris.

Carrie.—There are more than five hundred published works. Those with opus numbers extend to one hundred and thirty-eight; those without bring the list to two hundred and fifty-six. Some of the single numbers contain twenty-six compositions.

Martin.—The letters u. c. are abbreviations of *una corda*, an Italian term to designate the use of the left hand (soft) pedal. The Germans use *mit verschiebung*, and the French *petite pedale* for the same purpose.

Cantus.—The old English Round "Sumer is icumen in," is said, upon fairly good authority, to have been written in the thirteenth century. It has, also, Latin words. The original MS. is preserved in the British Museum.

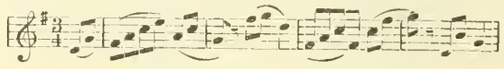
E. J.—Others have met with the same difficulty in finding a relative minor for the key of E. This arises from the fact that the key of C♯—seven sharps—has been ignored; which should not have been the case. *On the piano* the keys used in the scale of D♭ are the same as those used for C♯, but the scales, theoretically, are not the same, altho' made practically so by the temperei scale. There are seven letters in music, each capable of change by sharp and flat; there are seven sharps and seven flats and a key group and scale for them. It is a mistake to teach that six flats (or sharps) is the limit, especially with the use of the modern chromatic harmony.

E. F.—Henry W. Ernst, the celebrated violinist, was born at Brunn, May 6, 1814. His death occurred at Nice, in October, 1865. He was a pupil of Mayseder and De Beriot. His concert tours were very successful throughout Europe. The Elegie, concerto in F♯ and Othello fantasie are known universally and greatly admired by performers and the public.

Tomkins.—A Tonal Fugue is one in which the answer, instead of following the Subject interval for interval, sacrifices the closeness of the imitation so as to conform to the tonality of the scale, which is considered more important.

Lehrer.—The Leipzig Conservatory of Music was founded by Mendelssohn under a grant of 20,000 thalers by the King of Saxony. It was opened on April 1, 1843. Among the teachers were Schumann, Hauptmann, David, Pohlenz and Becker. Later Moscheles, Gade, Richter and Plaidy were associated with it. The first name on the list of pupils is Theodor Kirchner. The Thomas-schule is also famous for its music and is an institution of which the Leipziger is justly proud.

Salto.—The Ländler is a national peasant dance of Austria, Bavaria, Bohemia and Styria. It is supposed to derive its name from Landel, a district. It is a slow waltz; a country dance. The time signature is 3-4, or 3-8. Occasionally it is accompanied by voices.



This is an example of a Styrian Ländler.

REVIEWS.

VOX ORGANI. Edited by Dudley Buck. Published by J. B. Millet Company. Four volumes, each 128 (9 x 12) pages. Bound in cloth. Price, $20.00.

New music for the organ, written expressly for this work by eminent composers of Europe and America. Among the European contributors are the following well-known organists: Alex. Guilmant, Henri Deshayes, Oskar Wermann, Otto Thomas, J. C. Bridge, Oliver King, Bertram L. Selby. Among the American organists who have contributed are the following: John K. Paine, Horatio W. Parker, I. V. Flagler, F. W. Batchelder, Gerrit Smith, H. H. Huss, W. W. Gilchrist, J. A. West, Arthur Foote, J. Frank Donahoe, John S. Camp, Herve D. Wilkins, Bruno O. Klein, R. H. Woodman, John M. Loretz, H. M. Dunham, Geo. W. Chadwick. Homer N. Bartlett, G. M. Dethier, Jos. Mosenthal, J. H. Brewer, H. M Wild, F. G. Gleason, Dudley Buck. Published for subscribers only.

GRAND OPERA IN AMERICA. By Henry C. Lahee. Published by L. C. Page & Co. Large 16 mo. Cloth. Price, $1.50.

The famous personalities in Grand Opera have always interested the public, hence the theme Mr. Lahee has chosen for his present volume—the development of Grand Opera in America in the great companies, such as those of Mapleson, Strakosch, Abbey, Damrosch and Grau, under the best known conductors—is an attractive one. Mr. Lahee's position as a musical authority establishes the value of his critical work.

A CRITICAL HISTORY OF OPERA. By Arthur Elson. Published by L. C. Page & Co. Large 16 mo. Cloth. Price, $1.50.

Mr. Elson's book is a survey of the opera field, giving in concise form, unburdened by technicalities, an account of the origin and development of opera, the growth of light opera, the evolution of the various schools, and the works of the great masters of operatic composition, from Mozart and Gluck down to Wagner and the latest developments of opera throughout the world of music. Incidentally, the reader is supplied with the critical key and standards for estimating the value of the works in this department of musical composition. Enjoyable for general reading, and valuable for reference.

BRANZOLI'S THEORETICAL AND PRACTICAL METHOD FOR THE MANDOLIN. Published by Hatch Music Company. Bound in cloth. Price, $2.00.

The best theoretical and practical method of instruction for the mandolin, used in all the leading European schools. This edition, reprinted from the latest European editions after a careful revision by Mr. Benj. F. Knell, embodies a number of new and important features, including: values of notes and rests, intervals and minor details of musical theory; examples designed to show, in the most explicit manner, how the various exercises should be played; clear instructions regarding the pen stroke for varying degree of speed, lucid examples of the various graces, and an illustrated explanation of triplet playing. All positions are clearly marked, and the entire work has been fingered with great care. A unique and important feature is the introduction of Mr. Knell's Tone Studies, illustrated by half-tone cuts showing hand positions.

YOUNG COMPOSER'S COLUMN.

RULES

1. MSS. marked "Young Composer's Column" must reach us by the 10th of the month to ensure notice in next issue.
2. Each MS. must bear the full name and address of the writer; the initials will be used unless a *nom de plume* is added.
3. Stamps must be enclosed if MS. is to be returned, but it is to be distinctly understood that the Publishers assume no responsibility for any MS.
4. No charge is made for the examination of any MS., and compositions of any nature may be submitted. The criticisms will be general and of such a nature as will be helpful to those honestly desiring frank and unbiased criticism.
5. No criticisms will be sent through the mail.

E. N.—(480 to 484). Your pieces are all musical and your melodies and harmonies show you to be possessed of a good deal of talent. Much that you write is, however, crude, and you—as you well know—need to study a great deal. To go through all your pieces would take too much space; we therefore select the quartette and chorus, "Love Divine" for notice, promising that the kinds of errors pointed out are common to all the MSS. Do not make a piece by stringing together a series of sentences in related keys. In "Love Divine," you have bits in F, B♭, D minor, F, C, G, C, F. These are not joined, nor do they develope one out of the other; they are single, unrelated fragments. In other words, the piece has no form. You may point out anthems constructed in this way, but that simply proves that some unworthy music is printed. Avoid bad progressions like the fifths in meas. 4, p. 1; meas. 15, p. 1; the octaves p 2, meas. 4; bad spelling of chords (A♭ for G♯) p. 3, meas. 4; C♯ for D♭, p. 3, meas. 11; if the tenor and soprano double the melody, you ought to have a second tenor, otherwise you only have three parts (p. 5. meas. 7). The writing all through is ragged and coarse. We think your best piece is the male quartette, and your poorest, "A Rose Whispers." This is full of all sorts of errors in harmony, wrong spelling of chords, etc., etc. There is no doubt that you have a good deal of talent, nor is there any doubt that you need a great deal more study before anything you write will have strength enough to win its way. We say this to spur you on, not to discourage you.

Rohilla—(485). We are glad to note in the Galop a distinct advance over previous efforts; keep on writing and spoiling music paper! We are sure that your perseverance will be rewarded.

H. W.—(486). Like Rohilla you are persevering. Formerly you had no sort of comeliness in your work. It was like the universe before the creative fiat, "without form and void" Happily you are working out of that, though the mazurka is the only thing you've done that has been satisfactory. The Nocturne you start well enough, but on p. 1, lines 5 and 6, you get yourself in a mess. On p. 2, lines 6 and 7, are very unsatisfactory, too. The Coda, p. 3, has a great deal of power in it; we like it. You are improving, but your form is not clear yet; work away and good fortune attend you.

V. W. B.—(487). The "Country Dance" is a jolly good piece rather impracticably arranged for piano. It is really an orchestral piece, is it not? We do not think that you could avoid a good deal of disagreeable blurring while using the pedal to sustain the long notes in the left hand. In the fourth measure the dotted half-note (minim) in left hand, is wrong. The piece is all right, but it will not be popular if published as you have arranged it. It will take too large hands to play it. You are a good musician.

G. B. N.—(488). The "Moonlight Reverie" is an arpeggio etude. Pages 1, 2 and 3 are to be considered the introduction we suppose, followed by the melody on pp. 4 and 5. The introduction consists of arpeggi for the right hand, the melody consists of argeggio for the right hand and for both hands with melodic phrases interjected. This is a familiar type of piece and while not unpleasant to the ear if well played, has little positive value. At the same time it may be the earnest of much to come that will be good and important. Compare your piece with any popular ones of the arpeggio type and see how by varying the rhythm, by changing the melody from right to left hand, or *vice versa*, by stopping the arpeggi for awhile, and by other expedients, the piece gains contrast and color. You have no tempo indication, nor in the first four pages is there a single expression mark. Send us something more from your pen.

THE OPERA.

August Spanuth.

"Let us go to the Opera," does not sound unlike a challenge to have a good time; there seems to be a tingle of frivolity in the very word Opera, and so one should not blame our good ladies for insisting on wearing their best frocks at the Opera. Frivolity and luxurious dresses match, they appear to be children of the same mood of life. Since two hundred years back the world has been accustomed to look upon the Opera as the most gorgeous musical entertainment rather than as the purest and highest achievement of musical art. At all times, even before Gluck and Mozart, there have been serious composers of Operas, men who aimed higher, who tried to elevate the standard of Opera, but in comparison with those who catered to the public's taste, they were few and far between. There is no gainsaying that the great bulk of Opera writers had only the one purpose in view, namely, to entertain the audiences in a more or less artistic way.

WITTICH AS KUNDRY.

And yet the modern Opera, originating in Italy during the sixteenth century, was undoubtedly intended to restore the antique drama of old Greece to life again. But from the very start the poets did not seem to take much interest in the scheme, and to write a "libretto" was generally considered an inferior proposition. To name one of the very few exceptions, Goethe may be recalled, who did not think it a humilating task to write a second part to Schickaneder-Mozart's "Magic Flute." Other great dramatists laughed at the thought of conceding genuine dramatic value to a conglomeration of arias, duets and choruses. Their principal argument was, that in real life dialogue, etc., was not sung but spoken. A very superficial argument, indeed! Or is it, perhaps, any less unnatural and unreal, if our dramatists write their tragedies in verses?

No wonder that under such circumstances the writing of "libretti" became an industry, a more mercantile than poetic occupation, and the merchandise they turned out was frequently not worth musical composition even by a third rate musician. Of course, there were good and bad librettos, or rather better and worse librettos, but none seems to have been so bad but that some musician was anxious to compose music for it. The greatest composers had struggled with poor librettos. Mozart especially had succeeded in turning inanity into wisdom, naughtiness into innocence and grace, through the divine power of his music; was not that encouragement enough for any musician to go and do like him? The composers were anxious to compose, and the librettists were anxious to furnish the occasions for composing; the former wanted opportunities for the display of their musical talents, they wanted verses for an effective aria, for a passionate duetto, for an extended finale, and the librettist made all these paraphernalia to order. The efforts of two such inadequate factors could never have resulted in the resurrection of the old Grecian drama.

The attitude of the public, however, had never been a very critical one. Almost indiscriminately it accepted such Operas as offered pleasing music, music that lingered in the ear or that stirred the nerves, no matter whether the situation called for quick action or for a long suspense. It is a fact that in a hundred poor Symphonies not so much poor music can be found as in ten poor Operas. On the other hand, we must not forget that in spite of weak and thoroughly insufficient libretti our great composers have given us a long list of masterpieces in this strangely incompetent form, which has been known more than three hundred years as "Opera in musica" (Work in Music).

If so many composers have erred in their operatic efforts, following the ephemeral taste of the public, and the alleged smart advice of the "knowing" librettists, they still have given ample proof of the distant possibility of developing Opera into a real drama. There is, for instance, hardly anything more powerfully dramatic, even in Shakespeare's and Wagner's works, than the tremendous prison scene in Beethoven's "Fidelio," while otherwise this work is full of musical conventionalities, indispensable to the conventional form of the libretto. Pizarro, Rocco, Jacquino, and even Marcelline, are not lifelike characters, but only Opera-dummies. They could not inspire a man like Beethoven to exercise his greatest power of perception. But that bloodstirring situation in the prison, when the faithful wife, with her own body, protects the unfortunate husband against the dagger of his arch-enemy, ignited Beethoven's very soul. There are other examples galore of a partially conscious and partially instinctive striving for a higher form of dramatic expression in Opera, and sporadically we find them even in composers who carefully calculated the effects they wanted to make, and seldom gave way to a spontaneous outburst. The gifted Meyerbeer is one of them.

GULBRANDSON AS BRÜNHILDE

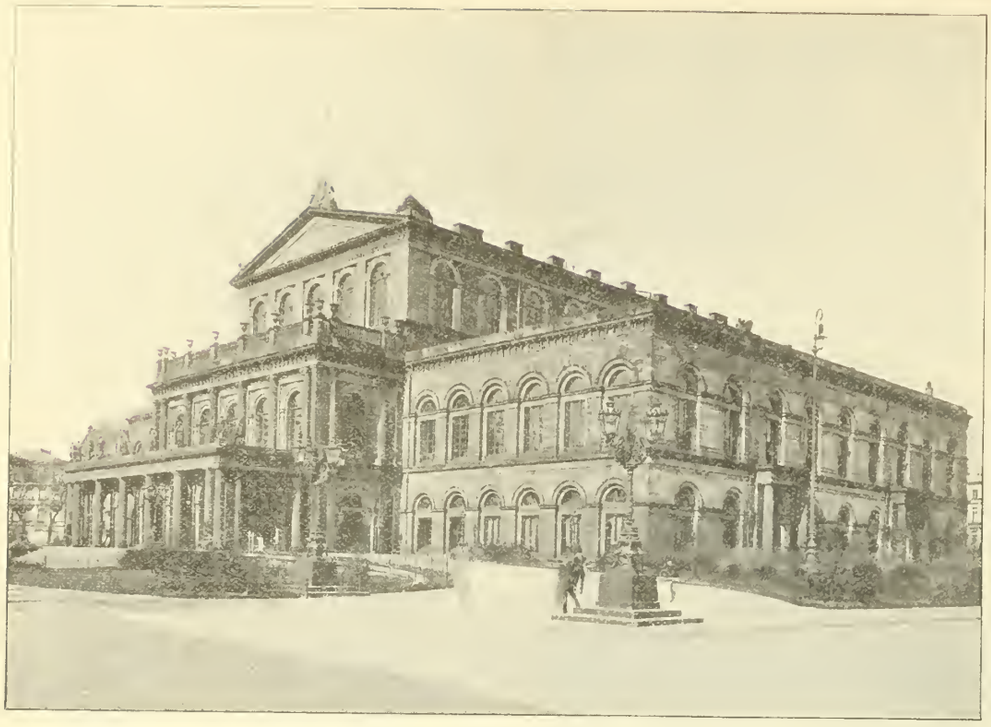
The dawn of reform could first be observed in Germany, and the reason can easily be detected. A tremendous musical fertility had sprung up in Germany with the beginning of the seventeenth century, and while the real musical ingenuity was overwhelmingly strong, the sense of form did not keep pace with the wealth of ideas. Furthermore, it was the fashion of the time, owing to the innumerable little German Sovereigns, all apeing at Louis XIV to imitate outlandish manners. Even old man Bach searched for more variety of form among the piano pieces of Couperin. Several German composers of that period had learned to master the Italian form of Opera to such an extent, as to enable them successfully to compete with the Italians themselves. But this narrow and unflexible Italian form became gradually exhausted, and at the beginning of the nineteenth century, Weber and Marschner accomplished what just about one hundred years earlier Keyser and Handel had unsuccessfully tried in Hamburg—the creation of a genuine German Opera. Among the other nations, only France had succeeded in somewhat resisting the otherwise dominating influence of the Italian Opera, though she was by no means free from it, there being a considerable similarity between the French and Italian Opera. While the French Opera kept many essential features of the Italian, the latter, during the second half of the century, borrowed some characteristic features from the French Opera.

Weber and Marschner, however, entered an entirely new field; they opened the door for the supernatural, and thus paved the way for the Music Drama of Richard Wagner. It is remarkable that in spite of the introduction of super-human characters these romantic Operas seem to reflect far more real life than the conventional Italian Opera. The secret is easily discovered. Instead of introducing historical personages, or heroes and heroines, taken from celebrated novels, the librettists of the German romanticists are satisfied with a rather plain every-day people, and in the plot they do not go beyond the line of probability. Murders are, therefore, less plentiful in those romantic Operas. If thus they lose somewhat in theatric effectiveness, they make up for it through the genuinely human feeling and bearing of the single characters. These characters are convincing without great names and great costumes, all the more so because the music makes use of its inborne witchcraft and furnishes an irresistible atmosphere. Furthermore, the instrumental adornments of the vocal numbers are done away with, and the dramatic expression is made a superior law to that of pure musical beauty.

DISTINN AS SENTA.

No other school of Opera has exercised so great an influence upon the further development of the Opera as the romantic. The French cultivated a most delightful style of Comic Opera, and the names of Gretry, Adam, and more especially of Auber, belong in the golden book of music. But their influence upon the progress of dramatic music was wiped out by Wagner. To the modern ear they do not appeal, except in a sort of historical way, which certainly does not exclude delight. Although we badly need new Comic Operas—do not mistake them for the article thus called in America—he who writes us a modern and vital Comic Opera will not start where Auber stopped. Nor is it beyond doubt that he will have to start where Wagner arrived in his Meistersinger. But the succession of Wagner does not need to concern us as yet, for the musical world has not completed the process of entirely digesting him, and a considerable part of the twentieth century might still be absorbed by this process.

Wagner's Music Dramas have endeavored to make a unity of action, word, music and scenery; they have brought us nearer to the ideal of the old Grecian drama than any previous attempt in this direction.



OPERA HOUSE IN HANOVER.

To dwell upon its characteristic features, to point out its importance and significance for our modern music is not the object of the present article. It may suffice to state that no musician can escape its powerful influence, whether he is engaged in absolute or in vocal music. Even those adverse to Wagner's principles will have to study his works with assiduity, and nobody, not even the most conservative one, could now write an Opera in the pro-Wagnerian manner. Against his will his pen would deviate from the old formulas. Wagner's influence having been so overpoweringly great, the musical world has been very much concerned about the proper way to perform his Music Dramas. Ever since the "Festspielhaus" on the little hill at Bayreuth opened its doors to a marvelling world in the summer of 1876, there have been revolutionary movements in the more important operatic institutions all over the world. The orchestras have been lowered according to Richard Wagner's theories of the most desirable dynamics. Unfortunately the fact was overlooked that without the sounding board on top of the orchestra only little improvement could be accomplished. But first and foremost, Wagner's Music Dramas have revolutionized the style of singing and acting. At present we see the most illustrous exponents of the opposite style, of the bel canto, a Jean de Reszke, a Marcella Sembrich craving for the satisfaction to appear in Wagnerian roles. From a despised revolutionist, Wagner has become the apostle of a new creed, whose enemies are rapidly dying away. Even his opponents will have to admit that with his Music Drama Wagner gave us specimen of unadulterated art, that he elevated the Opera stage above the level of a half artistic and half frivolous entertainment. To be sure, the atmosphere of frivolity has not yet been entirely driven out and probably never will be, for there is a constant and entirely justified desire for a less severe sort of dramatic music, but nevertheless the progress has been very marked and universal. Our swell audiences at the Metropolitan Opera House do not even complain about the complete darkness of the house when a Wagnerian Music Drama is given; and yet there are cynics who insist that our society frequents the Opera for the chief subject of showing their dresses and gossip. If this be true, they certainly accomplish very little, sitting for four hours in a darkened house and being compelled to listen to one of those exhibitions of heroic passion and heroic deeds Moreover, no singer would dare in these post-Wagnerian times to refuse his or her part as written by the composer and ask him to alter it to suit his or her voice or caprice.

America, having made such rapid strides towards musical progress, is still very much behind in the way of Opera as far as quantity goes, and very big cities have to be content with a few Grand Opera performances during all the twelve months of the year. This is a sad state of affairs, and a fundamental remedy seems to be far off as yet. New York alone can boast of a regular three month season of Grand Opera and of performances which in some essential points cannot be equalled anywhere else. Only *one* company being available to dispense competent operatic performances over the gigantic area of the Union, every music lover on the Hudson, on the Mississippi and on the Pacific is anxious at this time of the year about the prospects Mr. Maurice Grau has to offer. His company of artists does not differ very much from that of last year. He again seems to have engaged all the available prominent singers of Europe. It may be, however, that he will give us less Wagner Opera than formerly, owing perhaps to the extensive travelling of the company. Jean de Reszke does not return, but Alvarez, from the Grand Opera in Paris will try the American climate and American audiences once more. Van Dyke and Dippel are also with us, and a new tenor, de Macchi will be heard. Among the baritones the return of van Rooy will be looked for with pleasure. We will undoubtedly hear his "Flying Dutchman" after his making such a deep impression with this part last summer in Bayreuth. Unusually numerous, even for the dimensions of Grau's operatic enterprise are the sopranos. There is Ternina, Gadski and Eames, as well as Sembrich, Calve, Breval and Sanderson, not to make mention of the lesser lights. The principal altos and basses are again Schumann-Heinke, Homer, Plancon and Edouard de Reszke. We will miss Mancinelli at the conductors desk, his place being taken by Sepilli; Walter Damrosch and Flon are to conduct the German and French Operas.

Concerning the repertoire nothing new will be introduced to the cities visited before the twenty-third of December, when the New York season begins. The almost continuous travelling would not permit the hard work of rehearsing new Operas New York, however, and those cities whose turn comes after the Metropolitan season, are to hear de Lara's "Messaline," and Paderewski's "Manru." The first of these two Operas will be given chiefly because it affords Emma Calve an opportunity to display her particular histrionic talents and—because the very wealthy Princess of Monaco takes a lively interest in what she considers the masterpiece of her friend, the composer, Mr. de Lara. When the Opera was given in London last July, the house remained half empty in spite of Calve and Tamagno being employed in the principal parts. The other novelty promised to us, Paderewski's "Manru," has been performed in Dresden during the last summer, and also in Lemberg. The Opera is fiendishly difficult for the solo singers and for the chorus as well, and Mr. Grau's forces will have to work like beavers, if they intend to equal the Dresden performance in correctness and smoothness. In general, the repertoire will run along the same old lines as before. But for the season of 1902-3, Mr. Grau intends to give a complete Wagner-Cycle, with the exception of Parsifal, of course, and to engage for it the most formidable cast of singers that has ever been gathered for a similar purpose.

"What other things I hitherto have done
Have fallen from me, are no longer mine;
I have passed on beyond them, and have left them
As milestones on the way. What lies before me,
That is still mine."

—*Michael Angelo.*

DOGS AND MUSIC.

An interesting article might be written on the attitude of dogs towards music. Prof. J. K. Paine of Harvard once had a dog who could stand anything except Schumann—especially a Schumann trio. When that was played, he set up a dismal howling. A Holland newspaper relates an amusiug incident that occurred at a recent concert in Appingedam. A well-known basso was about to sing an air from "Cavalleria Rusticana," when a dog approached the stage. When the singer uttered his first notes, softly, the dog growled and showed his teeth. The crescendo enraged him so that he began to bark furiously, and when the climax was hurled forth, the dog's patience was exhausted. He leaped on the stage and made for the calves of the basso, who had to save himself by jumping on to the piano.—*New York Evening Post.*

STATUE OF MARSCHNER BEFORE THE OPERA HOUSE IN HANOVER.

ON MEMORIZING.

RICHARD HOFFMAN.

So much has been said in praise and admiration of the remarkable musical memories of some of our modern artists, especially the pianists of recent date, that it would appear like rank heresy to raise any dissenting voice against these achievements.

But while it enhances in great measure the perform ance of the soloist, I have always maintained that it was out of place in concerted music. There are too many involved in the perfect rendering of a concerto, for instance, for the piano player to take the responsibility of doing his or her part without notes.

Not often, but occasionally, I have heard great artists break down from loss of memory in the performance of concerted music or in a difficult sonata. I recall one instance of a pianist of great fame taking a modulation on the second page of Schumann's G minor Sonata, which brought him abruptly to the last page of the movement. He realized what he had done, suffered his awful moment, then honestly threw up his hands, pantomiming that his memory had failed him. He began again and played it through correctly, but nervousness, caused no doubt by the first breakdown, made him play so fast that the effect of the composition was ruined. The anxiety caused by this effort of memorizing, I think, should answer for the excessively fast "tempi" that prevail in the more modern interpretation of standard works. I remember watching de Pachmann listening to D'Albert's rendering of the "Finale" of Chopin's B minor Sonata with both hands curved behind his ears, thus indicating that he had great difficulty in reading the notes at such a speed as they were being played. Deliberation and reserve force are as necessary to the pianist as to the orator. Without them the audience is exhausted and its attention overstrained.

The originators of playing programs at heart were, in a measure, compelled to do so by imperfect or failing sight. Von Bülow, who conducted all of Wagner's operas without score, was so near-sighted that he could see nothing, even with glasses, except at such close range as to make his attitude and appearance grotesque. To play in public without notes became a necessity. His memory was cultivated to as high a pitch as it was possible to attain, but even with him it has at certain times played him false. I once heard him break down at the end of the first page of Mendelssohn's Prelude and Fugue in E minor, just as the tempo begins to accelerate. He lost the thread of the parts completely and coolly went back to the beginning. The second time there was no mistake and all went well to the end. This loss of memory and finding it again by a fresh start is a mystery still unexplained.

Chopin played even his own concerto with the notes before him and some one at his side to turn the leaves. He suffered from great nervousness when playing in public and would not trust himself to any of the treacherous tricks of memory.

In citing these instances I would not discourage any musician from giving much time to the cultivation and training of a musical memory; but in order to be quite safe and able to extricate one's self in case of accident, a thorough knowledge of harmony is indispensable, that the various modulations and changes of key may be followed intelligently. Dr. von Bülow contended that a good memorizer should be able to play the left as well as the right hand part of any composition alone, but for myself I prefer studying the fabric as a whole and keeping the entire structure in mind. Some adepts see before them the printed page as they play and know the exact bar before turning over. My own plan is to play the composition often, day by day, until it is well impressed upon the brain, then to study the copy carefully away from the piano with the eye alone, noting carefully the modulations and all intricacies of harmony. There are so many different ways of accomplishing this object that it is hard to decide which is the most effectual, and it must be left in great measure to the individual to discover the method best adapted to his own needs.

I had a very unpleasant experience myself with Schumann's Novelette, No. 1, which I once played as an "encore" without any previous preparation. I dashed into it with a good deal of spirit, but when I arrived at the fugato passage in D flat, I found I could not remember the way out, nor how to reach the key of A in which I knew the second subject was repeated. Here was a quandary, but I kept on playing the fugato intermezzo, it must have been eight or ten times, while trying to recall the combination, when suddenly it dawned upon me and I recovered from my dilemma and its attendant agony of mind. Of such experience is made the *mauvais quart d'heure* which, in its short but poignant suffering, leaves a man old before his time.

Unless the practice of memorizing is pursued in early youth, it is hopeless to try and acquire it later in life. The long sonatas and fantasias I learned and stored away in my brain as a boy, come out now like the slides of a magic lantern and with as little effort. Although I never rehearse them and seldom play them, unless they are called for, while more recent acquisitions fade away or must be constantly gone over if I wish to retain them.

The orchestral system for convenience in rehearsing and for saving the soloist in his lapses of memory is to letter or number all the orchestral and solo parts every thirty-two bars corresponding with the score, so that if the piano player loses his way the conductor signals to the orchestra to stop, and starts them again when the guilty soloist reaches a corresponding bar. In this way many slight deficiencies of memory are bridged over.

Charles Hallé was the first to play all of Beethoven's pianoforte sonatas by heart, and he accomplished this feat for many consecutive seasons, but his memory failing on some occasion he gave up the effort, and when I heard him give the sonatas, in London, he played from notes, using a patent attachment to each page, previously arranged, and turning the leaves himself by means of a pedal worked by the right foot. This was an invention to do away with the necessity of having some one beside him who might turn the leaves too soon or too late to suit his convenience. To avoid this annoyance the modern artist has trained his memory to be his servant and, except in concerted music, the audiences of to-day seem to demand that all programs must be given without notes. It is a marvel to me how many players of inferior merit have accomplished this art of memorizing—so far in excess of their musical interpretations—utterly without charm or beauty of touch they still grind out their interminable programs with the accuracy of a pianola and with scarcely more of individuality. Charm, in playing, is as elusive and difficult to describe as charm of manner. If you have it an audience will overlook an occasional slip of memory. You have, in some way, penetrated its inner sanctuary and so established a mystic bond of sympathy between yourself and your hearers, which pardons all.

Rubinstein had this intense magnetism about him which disarmed criticism. I once heard him flounder through a whole page in the first movement of Beethoven's C major Sonata. *He* did not go back for a fresh start but, knowing that he must reach the "dominant," made a dive for it and, gaining this point of safety, went on without further disaster. He alludes, in his writings, to these lapses of memory before an audience, describing such moments as terrible and overwhelming. But no one could be so presumptuous as to criticise Rubinstein for an occasional slip of memory; he stands alone in his magnificent achievements, and we would be only too grateful for the privilege of hearing him "forget" again. Still, I cite this instance that none need despair, reserving to myself the wish that so many would not presume.

OPERA HOUSE, AT HAMBURG.

THE EFFECT OF AMBITION.

MARIE BENEDICT.

Ask yourself what is the effect on the individual, of the constant mental vision of a goal to be won; of an ideal, toward which he must strive with his best life powers, if he would reach even the borderland of its complete attainment. Challenge your imagination to picture the desert, the wilderness, the abode of barbarism and savagery which the world would have been without this influence, which is forever impelling men upward and onward, which, through the ages, has ever been leading them to exploration of new continents, to the development of hitherto unknown powers, to investigation of untried fields of knowledge in every department of existence, the force which, in a word, has made our civilization what it is to-day, and you may have some slight conception of the effect of ambition; and of the incalculable debt which the race owes to this much abused, and much maligned mental activity. For ambition, in its noblest interpretation, is aspiration. It is the intense desire for, and the unremitting determination to attain to higher levels of thought, of expression, of accomplishment in any line of study; without which the individual is like the sailor with neither rudder nor destination; drifting lazily on the placid sea, but stranded on the first shoal, wrecked, perchance, in the first storm, for lack of the power to hold steadily to a chosen course, no matter how great the difficulties, until it shall bring him to the chosen goal.

Or, bringing the application down to the music student's special field, ambition is that secret, but all powerful something without which any and all accomplishment, except that of driving the teacher to the verge of insanity, is rendered absolutely impossible; and this latter result is not generally held to be the end and aim of "taking lessons."

Let your ambition be to acquire the ability to express somewhat, if ever so small a part, of the beautiful, as it is mirrored in music. In other words, to learn to play well; to interpret as perfectly as may be, whatever you undertake to play. Let your study include that too often neglected factor in musical growth, the listening to the interpretation of genuine music by genuine artists, as well as faithful, unremitting practice.

HOW TO TEACH.

JOHN S. VAN CLEVE.

As we look backward over the wonderful expansion and growth of our heavenly art of music in the modern world, during the past two centuries, which just about cover roughly its entire history, so far as the general public is concerned, we are struck first by the enormous development of its schools. Consider for a moment what a small and circumscribed thing was music in the days when the piano was not, and the violin was a new thing; when there was no such form as the sonata, no such thing as a symphony, an orchestra for any purpose non existant—at least any combination of instruments which we would dignify with that noble name; when even the organ, though the oldest and most perfect of instruments, was a mere crude set of whistles compared with the modern wonders in that form. Yet that was the time when J. S. Bach was a young man. During this period of two hundred years development, the speed of the evolution of music has been like the fairy story of modern electricity.

If we investigate the subject how to teach, the first thing which confronts us is the question how to know. The art of music has increased, multiplied, and differentiated its creations till it is now the work of a lifetime to be a real expert in any one of a dozen departments. In all this unfoldment, however, there have been two distinct tendencies, the one toward the development of mechanical skill, the other toward imaginative and poetic expression. The climax of the first tendency is the virtuoso; of the second, the composer. In between these two, sharing their knowledge, and effectively coöperating with them, stand the critic and the teacher. The critic is the conduit between the virtuoso or composer and the general or the listening public; the teacher is the conduit pipe between the composer and the young learner. A man may fulfill any one of these functions, or may combine two or even all of them in his own person, but there never has been anyone who ranked equal to himself in all. Thus, Beethoven was a virtuoso, but far greater as a composer; Liszt was great as a composer, but more singularly illustrious and preeminent as a virtuoso. Hanslick was greatest as a critic, while Leschetizky is most celebrated as a teacher. A thousand other illustrations more intricate and more subtly shaded than these might be cited, but it is not necessary.

Narrowing our view to that seemingly small but really vast realm, the region of pianoforte music, we find two tendencies so determinately fixed that they seem at times to be antagonistic, the one to the other. The virtuoso pianist, like the virtuoso vocalist, has always had an enormous advantage, when it came to attracting pupils, over those teachers who were devoid of this reputation, but this is only a mark of the crudity of the public judgment. Thus, Thalberg received three guineas ($15) for an hour's lesson in London, and John Field a sum nearly as great in St. Petersburg. Yet one need scarcely say that no lesson so given could be really of commensurate advantage to the student with the keen, clear instruction of teachers whose work is really teaching.

As time has gone on, the division and subdivision of specialties in music has made us realize that few, if any, can be equally good as teachers and as artists. Chopin was a shining exception, but there were few if any others among the greatest ones.

We are beginning as a nation to awake to the idea that it does not follow that he who is the most gifted and dextrous artist, is, by that very fact, without other abilities, the most capable teacher. We begin to realize that it is no more necessary to be a virtuoso in order to teach well, than it is to be a poet or novelist in order to teach English literature. It is quite doubtful whether Longfellow or Hawthorne would have been able to do effective work as instructors in the arts which they so brilliantly adorned. While Beethoven was able to be of help to persons like Czerny and Rietz, he was certainly not a good teacher. It is very easy, however, to stumble into pitfalls when trying to blaze our pathway by analogies and generalizations. The competent teacher need not be a brilliant virtuoso, but he must be at least a comparatively good performer. One must, as teacher, first of all know his subject, must be familiar with the tracks up the mountain to be climbed, and as one could by no means be a teacher of French or German who could not speak or write those languages correctly, even if not an orator or actor in them, so the piano teacher should be practically educated as a performer. I should say that a course of lessons taking one over the entire outline study of the keyboard idiom should have been completed, and at the least, good selections of a dozen or more varieties of piano music should have been made, to build up a moderate repertoire.

There is here a crumb of comfort for those who are not geniuses, for, just as it is sometimes urged, with truth and cogency, that the native Frenchman or German is not the best teacher for the tyro, but on the contrary, a person whose vernacular is that of the learner, so the best piano teacher will not be the one who learned technique as a duckling learns swimming, but rather, a person who has wrought out painfully and patiently the very same details over which the student is now progressing. Often when listening to a pupil at work upon things now small and simple to him, there will spring up to the lips an irritable word, but memory will hold up her magic mirror, and there stands the faithful likeness of a similar hour, long forgotten as to its weariness and pain, but not having been removed from the mind where its tiny granule of increased skill still lodges.

Then, as to the question, "How to teach," he first answer is to know, and to know thoroughly. There need not, indeed, be a vast field covered, your domain may be but a garden, but you must know its soil.

If you wish to be a good teacher you must know the particular specialty which you teach, with all the familiarity of a carpenter with his tools. But, in the second place, you must know several topics which lie contiguous to your specialty.

To make this thought clearer by an example: if you teach piano, a little acquaintance with the laws of the artistic voice, or the violin, would be of help. If you do not quite see how, recall what Chopin used to say to his students. Suppose you are hearing your pupil recite a nocturne or a song without words; if you have never concerned yourself with the voice, and do not hear it in the ears of your imagination while the piano is sounding it in the ears of your body, you may set it down as absolutely certain that the playing of your pupil, tho' as correct and exact as a music box or a pianola, will be absolutely dead and cold.

Again, if you attempt to interpret Beethoven, or teach the interpretation of Beethoven, you will miss much of the beauty of the work unless the orchestra, at least in its main features, be familiar to you. Beethoven so constantly thought in the phrases suitable to the orchestra, that the very instruments of the band seem constantly to make themselves heard through the sounds of the piano sonatas. If you can guess where the clarinet, the oboe, the cello, the trumpet would sing, your reading of the sonata will be shaded and colored by that inner process of your mind without being aware of it. This illustrates how two of the fields contiguous to the piano realm may help materially and obviously.

No one who has the temerity to undertake to teach dares to omit theory study. I wonder how many hundreds of times I have been asked, with a wistful weariness in the young questioner's voice, if it is really necessary to take a course in theory, if one does not intend to compose. The piano teacher absolutely must be a theorist, and a good one, if the teaching is not to be dull and lifeless. There are, it is true, geniuses who catch at the composer's thoughts as if by intuition, but these are very few, and unless you are enough of a theorist to follow and dissect the composition as by an unconscious process, there is no chance of your work escaping a certain vagueness and indecision, for you will not catch the slight changes of thought and feeling which the composer has entrusted to his notes. Do not then ever allow the lazy question to arise—must I really study theory? Of course you must.

Having your equipment of special, collateral and theoretical knowledge, now comes a long procession of questions as to what one should do. I would say here, that no really good teacher should do much playing for pupils at lessons, except when a thing has been thoroughly mastered, and it becomes necessary to give finish and interpretation. If you play for beginners, you only encourage that mental indolence and catch-as-catch-can style of study which is the bane of our art.

If your pupil be talented and gifted with a good ear, the evil will be still greater. Compel the pupil to exercise the powers of the mind, all of them, and especially the mathematical ones. Just here is the breaking point of many an otherwise brilliant pupil. Singers are especially weak in their knowledge of the simple rudiments of the art. Rare, indeed, is that singer who does not at some time or other say, "Time always was hard for me."

Have a plan, but not a cast-iron one. Let your plan be a chart, not a gridiron; a landscape, not a paddock; a tendency and direction, not a machine and a groove. Have a general notion as to all the things which are requisite to a reasonably good pupil, and insist upon these constantly and repeatedly, but do not be a mere pragmatic phrase maker, or a martinet of a stern and austere militarism. Never let your pupil escape from the scales, but keep them from galling the flesh if you can. Let your technique be made as pretty as may be by all manner of devices, such as playing the scales in canonic form, by plaiting them over each other, by reiterating the joins, by changing the weight, the speed, the degree of legato and staccato, by changing their dynamics, and in all the ways you can get wind from every point of the compass. Cultivate all sorts of desirable moral qualities. Thus, be gentle yet firm; genial yet dignified; eager yet patient; learned, but not pedantic; versatile but not desultory; systematic but not inflexible; reverent to all great classic things, but not bigoted or narrow toward all new things which are good.

Finally, cultivate a kindly and friendly relation between yourself and your pupils. Make them feel that they are taking you by the hand as children, to travel into a land of "Fairy," as Spenser said.

Music does demand much toil and many weary hours of drudgery from her votaries, but how wonderously she does reward the brave and faithful who endure the trial.

ON FINGERING IN PIANOFORTE PLAYING.

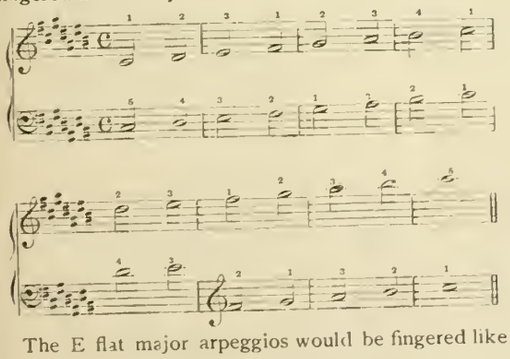
E. R. KROEGER.

There have been many remarkable advances made in the art of pianoforte playing in the last half century, and none more so than in fingering. This has been defined as "the method which governs the application of the fingers to any keyed instrument," and includes the proper indication by figures as to the fingers necessary to use. It is but a short time in the history of musical art that three fingers were chiefly used in scale and other figurated passages, and the thumb and little finger almost altogether avoided. It remained for Johann Sebastian Bach to give the thumb in particular its place in a systematic method of fingering and his innovations became laws, which have been closely followed down to the present day. A few comparatively unimportant features of Bach's fingering were rejected by his son, Emanuel Bach, who had so great an influence upon his immediate successors, Haydn, Mozart, Beethoven and Hummel. The development of the instrument had considerable to do with the progress made in fingering. Sebastian Bach wrote for the clavichord, an instrument decidedly superior for polyphonic playing to the harpsichord. Consequently his "clavier" compositions are mainly preludes, fugues, inventions in two and three parts, suites, partitas, etc. While some of his preludes and allemandes contain considerable "figure work," yet the bulk of his pieces are those in two, three and four part counterpoint, wherein the compass is rather limited. Necessarily the method of fingering is of a different nature from that required by compositions in which extended scales and *arpeggios* play a prominent part. There is considerable linking of the hands and tossing of a part from one hand to the other. Changing of the fingers on the same key and musical crossing are necessary to preserve the integrity of the parts. But in the compositions of Haydn and Mozart we meet with a great deal of "figuration," as both of these composers preferred to write for the harpsichord, an instrument very much lighter in action than the clavichord. With the advent of considerable scale and broken chord movement, a methodical use of the crossing of the thumb had to be made. Beethoven followed along the lines in fingering of Emanuel Bach, Haydn and Mozart, but added some of the Bach ideas in gliding and changing of fingers, as he wrote entirely for the pianoforte, an instrument greatly superior in sonority to the harsichord, and thus capable of rich expression in polyphony. The three great *etude* composers of this period, Clementi, Cramer and Czerny, had a marked effect upon setting a systematic and satisfactory method of fingering. Their *etudes* abound in all kinds of figure work and demand great skill and ease in the crossing of the thumb. The compositions of Hummel contain many graceful runs, which are very effective even at this day. Schubert's piano works contain little that was new to the pianists of the early part of the last century. Some of his figurated

pieces are very grateful to the player and others are awkward. Weber made some innovations in the art of fingering. His extraordinary pianistic ability caused him to seek for new combinations, which he early discovered, greatly to the advantage of piano playing. Mendelssohn's figuration was along well-established lines, but Schumann, with his extraordinary widespread chord effects and novel combinations of homophonic and polyphonic ideas, was very instrumental in bringing about marked changes in fingering. However, it is mainly to Chopin and Liszt that really "modern" fingering owes its existence, and this is largely due to letting the wrist play a prominent part in the performance of scales and *arpeggios*. Chopin recommended a distinct bend of the wrist to his pupils in playing scales, a method entirely opposed to the ideas of the most celebrated pedagogues of that period—Moscheles, Kalkbrenner, etc. Even at this day there are those who claim that in the C major scale, for instance, in passsing from the fourth finger on B to the thumb on C in the right hand—the hand should be absolutely stationary, a method opposed to its natural conformation. Liszt achieved many of his remarkable effects by a very free play of the wrist. He held it quite high, thus enabling him to make crossings impossible to those who maintained a level or a depressed position of the wrist. Another feature which was so conspicuous in his playing and which is one of the great points with modern artists, was the use of the damper pedal. By skillfully employing it in certain instances, the hand can be taken from the keys and the tone carried by the use of the pedal. This enables the player to use an entirely different method of fingering than he would were he to depend upon the fingers alone without the aid of the pedals.

The early editions of pianoforte compositions contained little or no indication of fingering, so almost everything was left to the player. But with the advent of the Chopin-Liszt fingering and the scientific—if I may so term it—use of the pedals, it was found necessary to edit the works of the masters according to modern ideas in this respect. There is no question in the writer's mind that for the use of students only the most carefully edited compositions should be selected. Let an immature pianist use his own judgment in the fingering of certain passages, which would seem to follow upon the most natural lines, yet he will get some fantastic fingering when it seems impossible to go wrong. Artists, however, will generally prefer to use editions with no indications of fingering whatsoever, as they prefer to use their own system.

The pianist to-day should be able to play as readily in one key as in another, and to use a similar fingering for a piece played in C sharp major as in C major. To do this a high degree of skill in crossing the thumb under the third and fourth fingers is essential. For practice in this sort of work the Daily Studies of Carl Tausig are to be recommended above everything else. In these Tausig takes a certain "formula," beginning in the key of C, and uses it sequentially in the remaining eleven keys with the same system of fingering. Following upon this line, the writer heartily recommends practicing all the scales, arpeggios and seventh chords for the different keys, with no alterations of fingering. The C sharp major scale would then be fingered in this way:



The E flat major arpeggios would be fingered like this:

Also passages from the works of the great masters should be selected and played in the remaining chosen keys with precisely the same fingering (if possible) as that used in the original. This method of work will give a facility in technic impossible to secure otherwise. To the skilled pianist of to-day every key should be equally difficult, or, rather, easy. And he should be able to execute a passage equally well in C sharp, E flat or F sharp, as in C major. No student can really be said to have achieved artistic results until this can be done.

HANS ENGELMANN.

Among the great number of contributors to THE MUSICIAN, Mr. Engelmann ranks as one of the most popular. His compositions are original and full of melodious simplicity, and he has the happy faculty of eliminating all unnecessary difficulties. As a writer of teaching pieces, and especially of pieces in the first and second grades, he has few equals.

Mr. Engelmann is a prolific writer—his last published piece being Op. 540—but he never slights his work; each composition shows extreme care and conscientious thought. The 540 referred to above do not include the compositions published under a *nom-de-plume;* these number several hundred.

HANS ENGELMANN.

Not alone as a composer and arranger has he gained an enviable reputation; as a teacher his methods are modern, and based upon the best systems.

Mr. Engelmann was born in Berlin, Germany, in 1872. He was educated in the public schools of that city, and at the age of seven years began the study of music under some of the best teachers in that noted musical center. Later on he took a course at the Leipzig Conservatory.

He came to Philadelphia eleven years ago, and since then has made this city his home. He perfected himself in harmony, under the tuition of Herman Mohr, and immediately took up his life-work of teaching and composing. At first it was a struggle but, diligently performing the kind of work that never fails to bring proper results, he has succeeded beyond his most sanguine expectations.

Among a number of his compositions that have became great favorites with teachers and the music-loving public, we mention the following:

Farewell, My Dear Old Home—Reverie.
Whirling Dervish—Tarantella.
Cavatina in B♭.
Albumblatt in D.
Magic Spinning Wheel—Tarantella.
Dance of the Snowflakes—Caprice.
The Village Church—Sketch.
Serenade Orientale.
Mercedes—Spanish Bohemian Caprice.
Prelude in E♭.
Forest's Greeting.
Homage to Chopin—Impromptu.
Chapel in the Village—Reverie.
Dance Boheme.
Dance Hongroise.
Dance Mystic.
Encore—Intermezzo.
Bagatelle.
The Night Before Christmas—Characteristic Sketch.
The Zitherplayer of Annenthal.

In this issue we present "Yuletide Charm," one of his recent compositions. Written especially for this issue, and thoroughly in keeping with the season, we anticipate that it will meet with hearty approval.

SUGGESTIONS FOR TEACHERS.

H. A. CLARKE.

Suggestions for teachers may be divided into two classes: *first*, those that apply to the teacher himself; *second*, those that apply to his work with his pupils.

The first duty of the teacher should be a strict self-examination to discover whether his natural and acquired endowments justify the choice of teaching as a profession. The most important natural gifts are tact and patience—tact to seize upon and turn to advantage the idiosyncrasies of the pupil; patience to go over, unweariedly, the old familiar ground, finding fresh illustrations and new examples, instead of listlessly repeating the same form of words.

The natural must be supplemented with acquired endowments. *First*, the teacher must be thoroughly familiar with his subject; incalculable harm is done in every branch of teaching by half trained teachers. *Second*, he should have a "system," but the system should be very elastic, so that it may be modified to suit the varying temperaments and abilities of his pupils. *Third*—and most important—he should endeavor to develop the musical sense in his pupils.

The modern tendency is to train pupils as though they were intended to become public performers. They are taught to work their way through pieces that require the powers of a Paderewski or Godowski. While it is wonderful to note the results that have been achieved by modern systematic training, these results are unquestionably secured at the cost of musical training. The teacher should never forget that the pupil who learns to play the piano for the pleasure of herself and friends should have a curriculum especially devoted to the attainment of this object, and that it should differ entirely from that appropriate to the candidate for public honors, or for the profession of teaching. The chief thing to be insisted upon in such a course, is the training of the ability to read at sight. The lack of this power is the chief reason why so many pupils who, while under the instruction of a teacher, learned to play a large "repertoire," rapidly deteriorate when the stimulus of the teacher is removed, owing to the irksomeness of slowly picking out new music. On the other hand, if the musical sense and power of reading had been cultivated by giving them a wide range of music, well within their technical ability, their playing would not deteriorate, but possibly improve, after they had passed away from the control of the teacher.

It should not be forgotten that the playing of the great piano works is a matter demanding all the time and strength of the player, consequently they should be left to the great players. Sure it is that the amateur will get and give more pleasure by playing well one of Mendelssohn's songs without words than by feebly struggling through a ballade by Chopin, or a Rhapsodie Hongroise by Liszt. All good music is not difficult, technically, any more than all difficult music is good; but to play good music well is a much greater accomplishment than to play difficult music, even as correctly and feelingly (?) as the Pianola.

We think that if the various reasons for which pupils study music were taken into more serious account by the teacher, piano playing would largely cease being what it too often is—a terror to the neighbors and the dread of the unfortunates who are compelled, through social tyrrany, to "assist" at the performance of some poor girl who has had a composition drilled into her, the meaning of which, and the proper performance of which, lie far beyond her powers.

FOR THE YOUNG PEOPLE.

The Young Musicians' Perseverance Club.

Conducted by ARTHUR L. MANCHESTER.

Well, Club-mates, this is to be your issue. A number of letters have come, and they are printed as a sort of preliminary chat. You are all busy with Christmas "fixings" now, and it will do you good to stop and read these interesting letters. They will show each member what the other has been doing; they contain much that is encouraging, too.

We all extend our hearty sympathy to one of our number, Violet May Smith, who has had a great sorrow come to her. Her dear Father died in August. She has turned to her music and is finding help in it.

The November answers are coming in and we will print the names of those who do the musical mathematics in the January number. We hope that the name of every member of the Club will be included in the list.

The Editor wishes everybody a very Merry Christmas and Happy New Year.

—

"I'm going to by and by." That sounds like determination, and that is what the Perseverance Club stands for.

ST. CECILIA'S CIRCLE, MCSHERRYSTOWN, PA.

Dear Editor—I take singing lessons and I am just beginning to go to Circle. I like music very much. I don't play now, but I am going to by and by. I am ten years old. I am

Your little friend, ANNIE M. BUSBEY.

ST. CECILIA'S CIRCLE, MCSHERRYSTOWN, PA.

Dear Mr. Manchester—Sister Mary Clare said you wanted me to write you a letter and tell about my music. She said I must have it all written by Monday. I went to Circle for the first time last Saturday, and we read about when Handel was a little boy and his father was not willing for him to learn music. I go to school to the Sisters of Saint Joseph and I take music lessons from Sister Mary Teresa. She is not cross at all, but she is very particular. I have to keep my arm still and move my fingers and not make them stiff. I am nine years old and I am just beginning music. I just love to practice, and by and by I am going to have a piece. I will be careful to do the Club work every month.

Your little girl, MARY C. KLUNK.

ST. CECILIA'S CIRCLE, MCSHERRYSTOWN, PA.

Dear Mr. Manchester—This is my first year at school. Last year I was in the baby music class and we had singing, and the lines and spaces and some finger exercises, but now I take real music lessons. I have five scales and some exercises and I can play "The Wild Rider," by Schumann, pretty nicely. Mozart is the musician I have for my musician. I have belonged to your Club ever since Christmas. I am seven years old.

Your little friend, GENEVIEVE JOHNS.

ST. CECILIA'S CIRCLE, MCSHERRYSTOWN, PA.

Mr. A. L. Manchester—You have asked the Club members to write to you, so I will tell you how I am getting along in my music. I love to practice and especially a piece that is very attractive. I have finished my first book of Czerny's studies, and am now at the second. Some of my favorite pieces are, Mendelssohn's Spring Song, and a Sonata that I am just learning, by Scarlatti. Now, Mr. Manchester, we have begun a new year for the Club, and I am going to work hard. I think the other girls are trying to do so too. Last year I admit I did not attend the Club meetings as I ought, although I did the work. With best wishes to you for a happy and prosperous club year, I remain sincerely, A devoted Club member. MARY I. MCCANN.

ST. CECILIA'S CIRCLE, MCSHERRYSTOWN, PA.

Mr. Manchester, Dear Sir—As I belong to your Club now, I will not put off writing to you. I will do the Club work and I hope to be an honor to the Club some day. I take music lessons this year and I love it dearly. This is my third year at school and I am almost nine years old. Yours respectfully,

MARIGOLDE SMITH.

ST. CECILIA'S CIRCLE, MCSHERRYSTOWN, PA.

Dear Sir—I have just begun to take lessons and Sister says we are digging the cellar deep. I have started to go to Circle and I think the reading was very interesting. We read out of Thos Tapper's "Music Talks," and THE MUSICIAN. Sister lent me some old copies of THE MUSICIAN so I could read all about the Club. I hope I will have success with my music and Club. I guess I must close for this time.

Yours truly, GENEVIEVE POIST.

ST. CECILIA'S CIRCLE, MCSHERRYSTOWN, PA.

Mr. A. L. Manchester—As I have begun the year both for the Club and for music, I am again afforded the pleasant opportunity of writing to you. I hope to make every effort to succeed in my music and to give more attention to the Club work than I have done. I am now working at the March from Capriccio, Op. 22, by Mendelssohn, and for Technique, Ballad des Bathers, by Paul Wachs, and I take delight in practicing them. Wishing the Club continued success. I remain sincerely, ANNIE L. YANTIS

ST. CECILIA'S CIRCLE, MCSHERRYSTOWN, PA.

Dear Sir—I am one of the new members. Saturday was the first day I went to Circle. I love it very much. I am taking music lessons. I love it very much, too. I think my papa will get me a piano by Easter time. I will try to do the Club work every time.

HELEN POIST.

BLUE GABLES, MCSHERRYSTOWN, PA.

Dear Mr. Manchester—I think it is about writing time for me, perhaps you will say, "Yes, high time and a bit past it." My vacation was rather an unusual one; we did not go away anywhere, nor did we indulge in many picnics either. Like you, we had the pleasure (?) of moving, and although the distance was not a mile, still we were kept full of excitement for weeks. Clearly the red-letter day of the past year for me, was that on which we opened our new home with a reception. My father gave me the honor of christening it. I mean the house, of course. I finished by begging God to bless our new home, which henceforth was to be known as "Blue Gables." Just as I said the last words, the blue electric lights shone out in form of "Blue Gables." Every one said it looked beautiful. Yes, the summer was happy but it ended too soon, as all nice things must. I am now hard at work at my studies and music. I have Heller's "Art of Phrasing." My last piece was Godard's Second Mazurka. I like it ever so much. I am so glad that Anna May Bartlett won the diamond medal in the contest. I am sure she deserved it. I think we can feel very proud of her. With best wishes for our beloved Club. I remain, your devoted Club member,

MARY G. JOHNS.

MCSHERRYSTOWN, PA.

Dear Editor—This is my second year for Club. I like to be in the room when Sister reads out my name. I have a nice teacher. I am eight years old.

I am your little Club friend, LELA V. BUSBEY.

MCSHERRYSTOWN, PA.

Dear Mr. Manchester—I have just begun to take music lessons, and I like it very much. My teacher says I am doing splendidly. I am pleased to be a member of the Club and I will do all I can when I go to it on Saturday afternoons. I hope the Club members will succeed in doing their work and get more members. I have not been at Circle yet, so I do not know much about it, but the girls who have been, say it is very nice. I remain,

Your friend, MARY F. POIST.

URSULINE ACADEMY, WILMINGTON, DEL.

Dear Mr. Manchester—When I saw my letter printed in THE MUSICIAN, it encouraged me to write again. My piano studies are: Czerny's School of Velocity, Op. 299, Book I; Köhler's Twenty Studies in Scale and Chord Passages, Op. 60, and my pieces are: "Air de Ballet,"—Leroy Thomas and "Spring's Awakening,"—Wm. Peacock. And on violin I study C. H. Hohmann Practical Method for Violin, Book IV. I am improving on violin and piano, and I like it as much as ever. With best wishes for the Club's success, I am

Your little friend, REGINA M. N. MAHONEY.

MCSHERRYSTOWN, PA.

Mr. Manchester, Dear Sir—Sister read to us from THE MUSICIAN that you would like to have letters from every one of the members of the Club. It was in the two last MUSICIANS. I am quite late in writing. I like music very much, but I do not like to practice very well. Sister says that if I would only practice well, there would be no little girls among her pupils who could play better, because I put expression in and I like the pretty places so. I got a new piece, it is pretty. I like to go to the Club very much and like to hear the stories read about the musicians, and take great interest in hearing them. I have to close, hoping you like your new home—I like hills. Your friend,

AVA E. MILLER.

URSULINE COLLEGE, WILMINGTON, DEL.

Dear Mr. Manchester—My name was sent in some time ago to become a member of the Perseverance Club. I have not answered any of the questions in THE MUSICIAN, but will try and answer them now. I take lessons on piano and violin and am very much interested in both. I have three Sonatinas for violin and have a pretty piece called "The Brooklet," Henry Kryder, for piano. I practice about an hour and a half every day. I try not give my teacher any trouble. We have a Musical Club at the Academy which meets the first Saturday of every month. We hope this year to get a little pin with the initial of our Club on it. I will now close as I do not want to tire you with my letter. I remain,

Sincerely, MARGIE MONAGHAN.

URSULINE ACADEMY, WILMINGTON, DEL.

Mr. Manchester, Dear Sir—Last month's MUSICIAN containing all the letters, was received and thoroughly enjoyed by me. I was, indeed, delighted to know that Anna May Bartlett won the prize in that contest and sincerely hope she may always be as successful in the future. In regard to my vacation, I must say it was not spent in study, but in just having a "good time." However, I was ready for hard work in September and have been trying to do my best ever since. At present, I am studying "Invitation à la Valse,"—Weber, having just finished "Dancing Waves," by Albert Pieczonka. At a meeting of our Club last Saturday, I was requested to send in the names of Annie Bailey, Eleanor Kane, Alice Gorman, Estelle Cogan, May Von Hofe and Edith Montgomery, who are desirous to become members of the Perseverance Club. With kindest regards to you and best wishes for the success of our Club. I remain,

A devoted Club member, ADA R. MARSH.

Your teacher intends you to keep going steadily forward, so do as she wishes and you will be pleased in the end.

UNADILLA, GA.

Dear Mr. Manchester—I was nine years old Sunday, and I want to join the Y. M. P. Club. I have been taking music one term and this will make my second one. I go to school and am in the fourth grade. You should see the pile of music I have to practice, Five Finger Technic, Etudes, Clementi's Sonatinas, scales, and from one to three pieces at a time. Sometime I think my teacher is imposing on me, but I am always glad to get a new piece. Our teacher has appointed two of her class to write to THE MUSICIAN each month, so you will hear from us often.

Your little friend, MADGE HORNE.

MCSHERRYSTOWN.

Mr. Manchester—you stated in last month's MUSICIAN that you would like to hear from us. I began taking music lessons of Sister Mary Clair last month, I think she is a very fine teacher. I have just been to Circle for the second time, so I cannot say a great deal about it, but I like it.

Yours truly, MAURINE GROFT.

Yes, Bach took out the patent of genius on his Inventions. Despite our musical advance, they have not been equalled since. When this member learns them well, she will like them more and more.

UNADILLA MUSIC CLUB, UNADILLA, GEORGIA.

Dear Mr. Manchester—I come, asking admittance to the Y. M. P. Club. I have been very much interested in this paper, and especially this department of it, since *our* Club, the Unadilla Music Club, started in September. We have hoped to get a letter in THE MUSICIAN before this. I only hope this will escape the waste basket. Our Club has not been started very long, but we are trying our very best to learn something about music and its composers. We meet once every month and so we have a new number of THE MUSICIAN at every meeting. Our last meeting was devoted to the study of Bach. What a truly great man he was to bear all his sorrows and privations with so much fortitude and cheerfulness! I do not thank him for having written his Inventions, tho' I think they are, most undoubtedly, the "crankiest" things I ever saw. I wonder if he ever put a patent on them? At our next meeting we will study Schumann. It brings the tears to my eyes to think of such a great and noble mind being afflicted with that dread disease, insanity. I have read that Liszt believed a piece could be made more beautiful by the addition of grace notes and such things, and I believe it. I am taking his Rhapsodie Hongroise, No. 2, and it is a masterpiece, truly. Indeed, it is almost more than I can master. I see that Jeannie Davis is studying Bach's Inventions. I hope she sympathizes with me. This is enough for this time, so I will close. Hoping to see this in the next MUSICIAN, I am,

Sincerely your friend, MAE COTTON.

WAKEFIELD, MASS.

Dear Mr. Manchester—I was very much pleased to see my letter printed last month. It seems strange yet very pleasant to read letters written by girls so far away. I have been taking lessons on the piano for about two years. I am studying Etudes, from Heller, Op. 47, and some of my pieces are "Maienleibe," by Schulz-Weida; "Rondo Mignon," by Baumfelder, and "Wanda Mazurka," by Fritz Spindler. I am fourteen years old and am in the grammar school. I think it would be nice if the girls would write letters to each other. Enclosed find answers to the questions. I am afraid that the third and fourth answers are wrong, but I tried my best with them. Yours truly,

GRACE A. WOODBURN.

WHITEHALL, MICH.

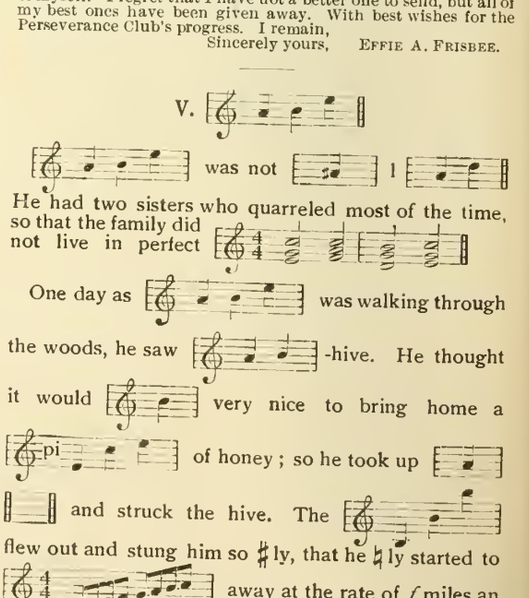
Dear Mr. Manchester and Club-mates—I see that by the October number of THE MUSICIAN that several of the scholars have told how their vacations were spent. On the second day of August, I started for the Pan-American Exposition at Buffalo. We went to Chicago on a boat and took another boat from there for Buffalo. We made short stops at Mackinac Island, Detroit and other places on the way. We had a chance to see some of the places. We were on the water three days. I enjoyed the exposition very much; the illumination was beautiful and the Niagara Falls were beautiful too. We were away from home ten days. The rest of my vacation was spent at home, or at Sylvan Beach, which is six miles from my home. My teacher's music class has musicales every month. At the last one I played a duet with one of the girls, it was "Chimes of Bells," by Geza Horvath, Op. 27, No. 3. Wishing the Club every success possible, I remain

Your friend, DORA COVELL.

MINNEAPOLIS, MINN.

Mr. A. L. Manchester, Dear Sir—Although I have only answered one set of questions, I intend to try and be more responsive in answering them hereafter. I am not attending school on account of my health, but nevertheless I find plenty of things to occupy my time, as Christmas will soon be here, and one must make gifts to help make the day happy. I think it is quite a pleasure to peruse the letters printed on the Club's page, as the majority of the members write very interesting ones. Enclosed is a photo of myself. I regret that I have not a better one to send, but all of my best ones have been given away. With best wishes for the Perseverance Club's progress. I remain,

Sincerely yours, EFFIE A. FRISBEE.



Who can solve it? What is its title, and what story does it tell?

CLUB WORK.

ST. CECILIA CLUB, TERRELL, TEXAS

"Music is a higher manifestation than all wisdom and philosophy."—*Beethoven.*

Such is the theme imprinted upon the first page of the Year Book of 1901–2, which ushers into the club-world another protége of St. Cecilia. "Our club is the baby of the Texas federation," writes its president, "for we were only six weeks old when we joined!"

Thirty enthusiasts are its sponsors, each a musician, who, should she be called away to a nearby town where larger opportunities await the student—promises to leave a substitute; the latter, though merely a member for the time, is eligible to the first vacancy as an active member. Associate members also have been enrolled with all privileges except those of voting and holding office, thus allowing some who are great lovers of music (or even good musicians who feel that they are too rusty in their music to do good work as active members) to be in a musical atmosphere and enjoy the programs. The services of an excellent parliamentarian have been secured for a number of drills during the year and the president is supported by the usual *corps* of officers, a program committee, and an executive board. To Polish music, to characteristic dances and to Texas composers are some original programs given: among names of Texas composers are: MacDonald, Kreissig, Dancy, Arledge, Schuh, Von Mickwitz, Ludwig, Olsen, Francis and Peacock. Of significance is the program to be given April 15, "Complimentary to Terrell Clubs." Here is a Christmas message to club women from an enthusiastic young club—a declaration that not to ourselves alone, should be the enjoyment and benefit of this art of music we call "Divine," but to others also should be participation of that which, declares Martin Luther, is "God's gift to man, and one of his greatest!" Mrs. A. B. Griffith is the president.

IN TOUCH.

Continuing "Club Chat" we quote a declaration from a member of a club in the remotest West. She writes: "We have ideas about music-clubs, but ideas only, therefore desire to be put in touch with the experience of others."

In this connection it is gratifying to the "Woman's Page" at the close of another year to look over the number of new Year-Books received, from clubs which, but a few weeks previous to their coming, had solicited help as to the manner of compiling these very pamphlets. Rivets in a bond linking musical club women over the length and breadth of the United States, they have brought closely in touch workers living at different extremes of the land. Here, for instance, is a club in northern Minnesota, which, in imitation (sincerest flattery) of a South Carolina club chooses to follow its especial program of the year. A Texas club takes as model of its Calendar's cover, the tasteful design of a club—one of the youngest—in northern Iowa. Best of all, here is a course of study, its details systematized by thought reflecting maturity of judgment and experience extended far from its original source, accomplishing an amount of good those who formulated it little dreamt of.

Sister clubs thus working together, in touch—though separated—give the strength of union, advantageous to every cause. We wish time would permit us to arrange a table of statistics showing the number of our correspondents brought together by the Year-Books during 1901.

Having accomplished so much on their mission of song, the continued interchange of Year-Books must redound to good, evincing a spirit among musical club women identical with that of this Christmas season, declaring "Good will to all!"

WOMAN'S GIFTS TO THE MUSICAL WORLD.

We arrived last summer in Brussels, to meet by appointment Mr. Victor Mahillon at the Brussels conservatory in a house adjacent to which is installed his far-famed collection of musical instruments; he, musician, scholar, and enthusiast, is singularly fitted to amass these treasures, therefore his Brussels collection is considered a pattern of what one of its kind should be. In the department devoted to ethnological assortments, is a little nook assigned to instruments from America, and conspicuous there is the label on many curios, "Don de Madame Crosby Brown," showing that Mrs. Brown's gifts have not been limited to the New York Museum which she has enriched. Mr. Mahillon enquired with special interest of the new Brass Room opened by her last year and of many other phases of New York's Collection. Philadelphia boasts of a similar collection, the gift of Mrs. Frischmuth.

Traveling over Europe, the gifts of women in the musical world are constantly in evidence, from southern Salzburg, where are those famous in history, of Maria Theresa to Mozart, up to London where in the South Kensington Museum stands the little virginal decorated with a queen's coat-of-arms; it belonged to Elizabeth, and recalls Burney's statement that as Anglo-Saxons, "We never had so just a claim to equality with the rest of Europe (in music) as at this time." She established a Chair of Music at Gresham College, and vigorously supervised the rendering of music throughout her kingdom. So in America 'twas Mrs. Mary E. Ludlow who made possible in New York City, the Department of Music at Columbia University; for in memory of her son Robert Center she established the chair.

We announced last month the fact that the many charities of the present opera singer, Therese Malten, had induced the township to alter the name of its most beautiful street, calling it after her, in grateful remembrance.

In America, the gift of data relating to music among the Indians, from Alice Fletcher, is most valuable, for in that field the laborers are few and harvests small; in addition to the monograph on the music of the Omahas, published by the Peabody Museum, of which she is the principal author, her latest work, "Indian Story and Song in North America," occupies an important place in the library of club women.

Relatively to donations which have advanced the cause of other arts and literature, those for music are few, but of the few, the share of women is in goodly proportion.

VIEWING AN ACTION.

Annually the Cecilian Club of Freehold, New Jersey, of which Mrs. Theodore Reisig is president, opens its season with a course of lectures, the topics of which are incorporated in its Year-Book. These systematized courses of study in Form, History, Biography and Mechanics stimulate interest in investigations to follow during the year. At every lecture, instruments of the modern orchestra have been seen and handled, the members thus becoming familiar with the oboe, the clarinet, and other instruments known to women usually, only by name. This year the club was given an opportunity to view and handle the action of an upright piano; the beautiful model was expressed to the club direct from the warerooms of Messrs. Strauch Bros., New York. After the lecture the members of the club and their friends gathered about it and permission to touch and handle having been fully accorded by the manufacturers, there was given a "proof positive, a demonstration ocular" of a piano's mechanism. Three keys—two white ones with an intervening black—were seen, with the accompanying mechanism complete in every detail, showing the manner by which a tone is produced from the touch of the finger upon the key up to the resultant stroke of the hammer upon the wire. Introducing the study, Mr. Strauch's own definition of an action was read: "A piano action is a combination of conflicting circles moving in different arcs, so harmonized as to work together without friction, but producing the maximum of power with the minimum expenditure of force—an examination shows us two circles moving in opposite directions in four positions, the key the first, the wipp the second, the fly the third, the hammer the fourth. Yet in these four positions the circles are so brought together as to allow of the greatest freedom and rapidity of action with a minimum of friction, so small in fact, that it is impossible for it to be felt even by the most delicate touch."

"Now, what practical gain is the sight of this mechanism to women?" asks the curious one. Practical gain enough to the busy housewife, who is considered responsible for sticking keys, buzzing wires, and the ravages of dust. Confronted by its simplicity, all mystery ends and no technicalities of a visiting workman can bewilder her. But to the club woman who is a music-lover, what a practical object lesson in that union of science and art, which music exemplifies! We quote again the words of Mr. Strauch: "While it is true that the great evolution of the piano industry has had much to do with the developing of the art of music and nationalizing it, the converse is also true that the workers in the field of harmony and tone production have exercised an immense influence upon the piano industry and its branches, and so have contributed much not merely to create a persistent striving for the highest ideals, but to the great strides made to attain them For the results to-day obtained the players are directly responsible, and it is they who are to be thanked for the high position the American piano occupies. In the effort of the artist to properly interpret the Great Masters, lies the starting point, and the desire of the piano manufacturers to aid in this laudable effort has led him to the endeavor to perfect his instrument 'till it has reached its present high standard. This has forced the action maker to follow in his footsteps, to meet his requirements and the artist's demand."

Ring on and on O Christmas bells!
While on the harmonious swells
The melody we love to hear,
That flings its cadence far and near,
While over hill and vale it dwells
The magic of those Christmas bells.

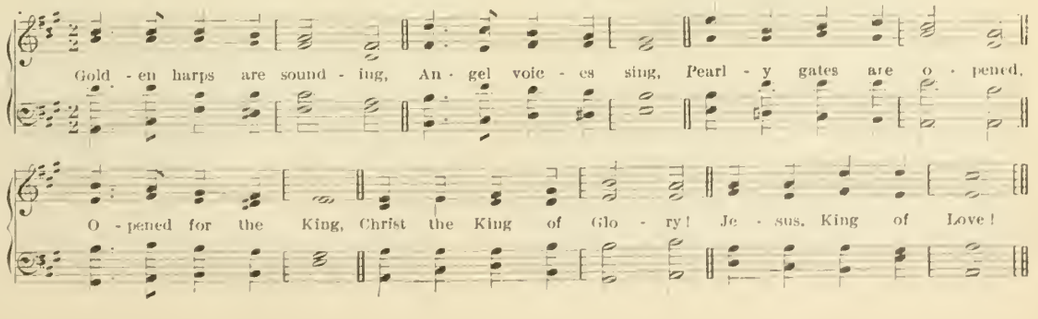
—*Ida Scott Taylor.*

Constant efforts are being made to stimulate interest in the personality of those who, by their works, have enabled the art of music to take rank among other arts, as one of the enobling influences of life, games in music have succeeded in arousing attention, and afterward chaining it to the subject. One of the most successful of these arrives in the Holiday season, and is called by its inventor, Mrs. Elizabeth Marsh, "The Tone Masters and Their Interpreters." Mrs. Marsh was for three years the president of the Music Section of the Amherst Woman's Club, and left a record of success which ensured an active career to the organization. The many bits of unusual information reiterated during the play will prove surprising to older folks than children, and so may this new-comer into educational circles be recommended to women's clubs as well as to the army of teachers, awaiting just such help.

In Würzburg, to Miss Höller has been assigned the position of cathedral organist, a post occupied 'till his death by her father.

Golden Harps are Sounding.

Words and Music by FRANCES R. HAVERGAL. (1836-1879.)



VIOLIN STUDY—PRACTICAL SUGGESTIONS II.

ETHEL LYNWOOD WINN.

There are very few professional violinists who do not do some routine work in the summer vacation. The eminent violinist Professor Joachim, of the Royal High School, Berlin, was once spending the summer in a little village in Southern Germany. One day his pupil and colleague, Professer Halir, who was spending the summer at the same place, heard Professor Joachim playing a Kreutzer Etude.

"You playing a Kreutzer Etude!" the astonished Halir ejaculated.

"Why, of course," the eminent violinist replied. "I know of nothing better than Kreutzer for any artist's technique."

I have frequently found students who had played Kreutzer, Fiorillo and Rode's Caprices and could not play one Kreutzer Etude correctly.

This may seem a very strange thing, but it is, indeed, true that very few violin students "dig" at Etudes. One is never too old for Kreutzer. I dropped it for two months and I found that I had actually forgotten an octave which I invariably play with students from memory; that reminds me that it is a good rule, and one that works well with students, to oblige every student to memorize the second etude of Kreutzer (in C). Supplement the etude with Massart's excellent bowings and you have an opportunity to teach over one hundred bowings "to the same tune." By using Massart, one can easily keep the student working upon the first twelve Kreutzer Etudes for a year, and in that time many important bowings will have been mastered.

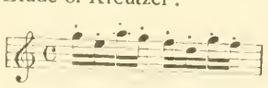
I find it advantageous to insist upon a half-hour of scale practice daily. We take the G scale in three octaves, and use over seventy-five different bowings. In a previous (November) article I gave some of the bowings used. After we have the G scale well under control we take the A♭ scale, then A natural, B♭—and so on to the scale of E♭. Few students master the F and F♯ major scales in three octaves, because they are the scales which only great artists practice daily and find exceedingly difficult for rapid bowings in the last octave.

Foreign teachers of any rank have very little idea how to teach beginners. Professor Jacobsen, the assistant of Joachim, was once asked by an American teacher how early he would start a pupil in Kreutzer. He replied, "O, the second year!" This, of course, is absurd. Hardly any pupil of average ability and talent in America, or in Germany, is prepared for Kreutzer under four years of study. We teach Kreutzer in the fourth or fifth year in America and, indeed, I doubt if any but geniuses abroad ever accomplished it earlier. Tone and technique are two essentials to a command of the Kreutzer Etudes, and I am sure that few students have the technique for Kreutzer before the fourth year. Every year I have to put pupils back into Kreutzer. A faulty bowing, a sluggish technique, a rash tone, are some of the reasons for the review work. We rarely teach the first Etude of Kreutzer. The second in C:

Should be practiced with the most important bowings of Massart.

A pupil came to me some time ago, who had played this etude with the Massart bowings, but he had practiced only the first line over and over with the bowings. This would not do. He found it much more difficult to play the entire etude with a certain bowing and then to repeat the process with another bowing. One etude should always be practiced in its entirety with the most difficult, as well as the easiest bowings, and one should select the bowings in ordinary use.

The third Etude of Kreutzer:



Should first be practiced as I have indicated above, with half bow from middle to point, and staccato. The tone should be clear, firm and even. The student should watch that the bow remains exactly parallel with the bridge and lies on the strings about one inch from the bridge. At the end of a summer vacation a student's bow invariably slips on the strings and the tone is either small or harsh. I always use the third Kreutzer for a week or two, with the bowing indicated, and insist on practice before a mirror. The etude should be practiced at first slowly; then in a few days faster, until a fine, smooth tone is accompanied by a free forearm movement. The teacher has always to watch the pupil's fingers in this etude. The habit of lifting the fingers from the strings, before it is necessary, is a very injurious one. Here are a few remarks which I find necessary to repeat many times during a week:

I. Left thumb in advance of first finger. Let the left thumb precede into the third position.

II. The left hand moves into third position without any extra movement of the thumb. In other words, the thumb goes with the hand, placing itself in third position close to the body of the violin.

III. The fingers fall *vertically* on the strings. If the thumb is placed wrongly, the fingers will fall diagonally and one is never sure of correct pitch in such a position.

IV. In the fifth position, the thumb should be well under the neck of the violin, and the fingers must fall vertically. In all the positions, except the very high ones, in which case the fingers are too large to remain in a fixed position, the fingers should remain upon the strings as long as possible.

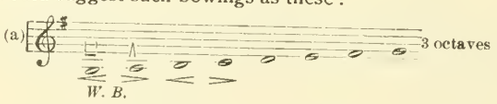
V. The finger should fall upon the string before the bow changes. Paganini used to practice scales without the bow and he heard every tone. When Professor Joachim plays, one who is very near him often hears the fall of his fingers upon the strings, for he throws his fingers with tremendous force.

The bow should touch the strings on the side of the hair, not on its flat surface.

VI. The knuckles of the left hand should be parallel with the bow stick. It is an old system, and it prevents the free action of the wrist, to tilt the right hand in the direction of the violin. The forefinger should rest very little on the bow stick; in staccato work at the point of the bow, and in sforzando work, the finger presses upon the bow stick very firmly.

VII. The real strength of modern bowing consists in the placing of the second and third fingers opposite to the thumb which is slightly bent. The fourth finger merely aids in balancing the bow and should never press too much or be in a constrained position.

VIII. American students seem to have a mania for technique. Cantilena work is not practiced enough. Every student should practice slow scales daily. I would suggest such bowings as these:



(*b*) Crescendo in down bow; diminuendo in up bow.

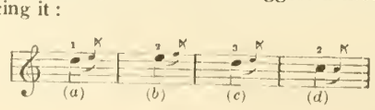
(*c*) Crescendo and diminuendo in one bow.

(*d*) Crescendo four times in one bow.

All this work is invaluable in preparing a student for shading. Tone color is one of the very necessary and too little dwelt-upon side of a violinist's education.

IX. Many teachers ignore the quick action of the wrist in a transfer from up to down bow or *vice versa*. You hear notes detached which were meant to be beautifully bound together—one flowing smoothly into another. Daily practice of scales with wrist movement entirely at the heel of the bow and then the same kind of practice at the point of the bow will aid this fault. I often use the second Kreutzer Etude with wrist bowing at point and heel if a student disconnects his tones.

X. The vibrato, that terrible bugbear of all teachers, should never be used by amateurs who cannot play in tune. Everyone who uses it plays sharp at times. Students come to me with scales vibrato and Kreutzer vibrato, and they really believe that the tones they produce are beautiful. On the contrary such tones are spasmodic, empty, amateurish and detestable. I despise the vibrato in excess in violin playing as much as I despise a man who weeps without cause. Both the vibrato violinist and the man who weeps bear a false and sickening sentimentality. The vibrato should only be used when the sentiment demands, and rarely at the end of a phrase. So many pupils play it incorrectly that it might be well to suggest a method of practicing it:



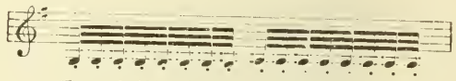
(*a*) Place the finger vertically and firmly on the string. Move it forward and back slowly, evenly and without touching at any point except at the tip of the first finger. The hand should not rest at all on the violin.

(*b*) Practice in the same way.

(*c*) Place the third finger firmly on the string; move it forward and back slowly and evenly, being very careful to hold the violin with the thumb and not to touch the hand at any other point.

(*d*) Practice in the same way.

XI. I generally teach spiccato bowing in the third or fourth year of study. If possible, I defer it until we reach Kreutzer and Massart, for pupils are invariably so fascinated with it that they neglect tone for it. I prefer the eighth Kreutzer Etude as drill work, supplemented by Massart's bowings. The pupil begins the spiccato work just below the middle of the bow, and if, during the year he learns to play it well, he generally plays later toward the point of the bow, about two inches from the middle. Professor Jacobsen of the Royal High School, Berlin, taught spiccato bowing by making his pupils play several swift strokes in the lower half of the bow with a very free wrist. He then took the G scale in three octaves in this way:



(Lower half two inches to an inch from middle.)

Considerable practice on open strings is necessary, and then the pupil should be very careful to keep the bow at a uniform distance from the bridge. The bow should never leap or glance irregularly on the strings.

After the method of bowing is well understood, the Perpetuum Mobile, by Böhm (Kleine Suite) may be given, and I have had the pleasure of presenting it at a pupils' recital this past winter, at which time ten of my youngest pupils played it with much delight.

For more advanced pupils the Perpetuum Mobile, by Bohm, in D major, is worthy of study. I generally double each note as the piece is made more effective in this way.

There are other pieces which are excellent for spiccato training. A few are:

Perpetual Motion, Ries.
Perpetual Motion, Paganini.
Elfin Dance, Popper.
Introduction and Gavotte, Ries.
Elfenspiel, Eberhardt.
Hungarian Poems, Hubay, Op. 27, No. IV.

Staccato Bowing.

This very important bowing is frequently much neglected by violinists. I remember with what despair I once struggled with a passage in the Polonaise, by Vieuxtemps, and it was only because I had not given attention to rapid staccato work when I should have done so. The fourth Etude of Kreutzer is the proper one for thorough drill in staccato bowing. It should be played from middle to point and the first note should always be drawn swiftly and perfectly parallel with the bridge. Students invariably cut the value of the last note of the lesson:

The sixteenth notes should be played with the least length of bow possible. They should be clean-cut, clear and crisp.

The fifth etude may be played with staccato bowing also, and I would advise every aspirant for a good forearm stroke, to play this etude at least five times daily, very fast and very firmly. It develops technique as well as tone.

It is said of Ole Bull that he could play a staccato run quite as well with down bow as with up bow. He also used very little bow for each note and his runs were like pearls, clear and beautiful. It is said of him that he could play 256 notes staccato in one bow with the greatest ease.

I believe the reason why many students play staccato runs badly, is that they have never developed the point of the bow. Some use bows too long for their arm. I use a seven-eighth length bow, and I know only one other professional lady violinist in America who does. I am told that the members of the Boston Symphony Orchestra practice the *martelé* bowing a great deal, and they believe that it gives them a fine command of

passages which require a sudden attack. I should say that surely two-thirds of all the violin pupils I know use bows too long for the development of a fine staccato at the point of the bow. Then the long bow places the hand in a tilting position on the stick, a grave fault. I rarely teach the *martelé* bowing in the first year of study of Kreutzer, but I think it an excellent plan to play the sixth etude staceato with forearm stroke. The last eleven measures should never be allowed to "pass" until perfectly rendered by the pupil.

Etude seven may also be played for staccato training, but I think it more especially useful in teaching a clever use of the bow in transferring from string to string. The elbow should be carefully watched, for every student is prone to hold his elbow in one position instead of raising or lowering it to meet the change of string. Closing the forearm at the elbow quickly is accompanied by a bending of the right wrist and the double movement insures a bowing parallel with the bridge.

For drill work in staccato bowing, I consider the Kreutzer Etudes invaluable, although the staccato should be taught before the pupil is ready for Kreutzer. I frequently use the eighth etude ; my pupils never tire of it and they memorize it easily, using a great many of the Massart bowings.

For young students who desire a few pieces containing staccato work, I would suggest the little Air de Ballet, by Paul Wachs, and the usual collection of Dancla pieces. More advanced students like the works of de Beriot and Leonard, or the more modern Hungarian Dances of Nachez and Hubay.

On one occasion, while doing some critical work with a very painstaking artist, I was reprimanded for clinging to the neck of the violin too much with the thumb. He put me hard at work on the ninth Etude of Kreutzer. A month of this kind of practice obviated the difficulty, and I find that etude very excellent for a faulty movement of the thumb ; and also for crude shifting into the positions. Pupils do not like the etude. While the ninth need not be practiced with Massart bowings, the eighth etude should always be thoroughly studied with these bowings.

And now we come to the wonderful tenth etude which we never allow to be left until mastered. It should be practiced with a forearm stroke from the middle to the point of the bow, at first slowly then more rapidly until, at last, it should be played very rapidly with a short stroke near the middle of the bow.

The eleventh etude is too often played more rapidly than it demands. A very common fault of students is to drag the fingers into the positions. After playing the first three notes :

The second finger should advance quickly to B in the third position and then the fourth finger will fall readily into place on the A string. In the second measure :

The first finger should pass quickly from D to B in the first position—after the first group—and the D of the second group will fall readily into place. The tone will be unbroken and there should be no disagreeable sliding.

And now we come to the twelfth etude, the last one in the first year of study of Kreutzer. I generally spend a month on this etude, supplemented by Schradieck's Scales and the excellent Tonleiter Studieren of Carl Halir. The pupil should practice each group of arpeggios until he masters it. The bowing used is a forearm stroke whose length depends on the technical facility of the player. It was the twelfth etude of Kreutzer that Professor Joachim was playing on his summer vacation.

Every pupil who intends to teach and, if possible, all others who do not intend to teach, should memorize the first twelve Kreutzers. One who teaches Kreutzer should present a model performance of that which he teaches. When a young girl, I played the Kreutzer Etudes under the watchful eyes of Julius Eichberg. I did not know then that the etudes had a beautiful second violin accompaniment. The remarkable part of it was that Mr. Eichberg not only played all the Kreutzers from memory, but he knew the accompaniment also from memory. I regarded his accompaniment as an improvisation, however, and for several years lived on, believing this. I should not advise a teacher to play the accompaniment with the pupil in the first year of Kreutzer study. The second year, when review comes, there will be an excellent opportunity.

All honor to Kreutzer and to his wonderful Etudes !

A PLAN FOR VIOLIN STUDY.

ETHEL WYNWOOD WINN.

I do not suggest this plan as fully complete or entirely comprehensive. A teacher has to adapt the plan to suit the needs of the pupil. I find the studies indicated useful, practical and, in most cases, all necessary.

First Year.

Hohmann's Method, First Book.
Scales with Different Bowings (Lillian Shattuck's Bowings).
Pleyel's Duos, Op. 8.
Pieces of great simplicity : "Harvest of Flowers," by Weiss.
Easy Classics, edited by George Schumann.

Second Year.

Kayser's Etudes, Books I and II.
Eichberg's Method.
Duos : Wohlfhart, Dancla, Mazas.
Scales, Lillian Shattuck.
Easy Classics.
Folios of Classics.

Third Year.

Dont, Op. 37–38.
Casorti s Bowings.
Dancla's School of Mechanism.
Eichberg's Method.

Fourth Year,

Kreutzer's Forty Etudes with Massart's Bowings.
Tartini's Art of Bowing.
Exercises of Carl Meerts.
Viotti Duos, 1087. No. 2.
Classical Pieces in third and fifth positions.

Fifth Year.

Kreutzer's Etudes.
Fiorillo's Etudes.
Scales, Schradieck.
Tonleiter Studien, by Carl Halir.

Sixth Year.

Rode's Caprices.
Schradieck's Scales.
Halir's Tonleiter Studien.

It cannot be stated at what period in the student's work certain pieces should be given. All this depends on the age, environment and aptitude of the pupil. I have pupils who cannot memorize a Kreutzer Etude and yet play with great temperament the pieces that I give them. Their talent is purely imitative and does not promise much for them unless they get down to solid technical work.

I will suggest teaching pieces which I have found useful :

Gavotte, Warner.
Reverie, Warner.
Schirmer Classics.
Slumber Song, Borowski.
Twelfth Caprice, Borowski
Mazurka, Borowski.
Aid de Ballet, Wachs.
Classics—Folios.
Duos, Pache.
Cavatina, Demuth.
Minuet, Demuth.
Serenade Badine, Gabriel-Marie.
First Sonata, Mozart.
Haydn Sonata, No. 6.
Spanish Dances, Moszkowski.
Perpetual Motion, Bohm (Kleine Suite).
Perpetual Motion (in D), Bohm.
Perpetual Motion, Ries.
Gnomentanz, Eberhardt.
Elfentanz, Eberhardt.
Adoration, Borowski.
Concerto in A minor, Bach.
Sonata, Schubert, Op. 103.
Concertos, Viotti (23–20–28).
Scene de Ballet, De Beriot.
Souvenir de Bade, Léonard.
Concertos, Rode (Nos. 7, 8).
Ballades and Polonaise, Vieuxtemps.
Romances, Beethoven.
Romance, Svendsen.
Légende, Wieniawski.
Hungarian Dances, Hubay.
Hungarian Dances, Nachez.
Hungarian Poems, Hubay (Op. 27).
La Folia, Corelli.
Sonata in G minor, Tartini.
Andante Religioso, Thomé.
Pizzicati, Thomé.
The Bee, Schubert.
Introduction and Gavotte, Ries.
Andante from third Suite, Ries.
Berceuse, Godard.

OUR FIRST TEACHERS.

FAY DAVIS SIMMONS.

Not long ago a friend of mine attended a concert where a pianist of note, who had just returned from abroad, was to appear. After I had inquired about the playing of this pianist I scandalized him by asking, "Is her stage presence prepossessing ?" The sarcastic answer was that if she was an artist her appearance, good or otherwise, made "no difference." I think that it *does* make a difference to all those who have eyes as well as ears. Such an art is beautiful, and one longs to have each part symbolic of the whole. A face and figure may be plain by nature, but love of the art, and cultivated grace of motion and of manner, can transform both. An actress who is desirous of arousing the deepest emotions in the hearts of her audience not only cultivates beautiful tones, which express to the ears of the listeners all the feelings her part calls for, but she so studies grace and necessary motions in private as well as in public life that she can satisfy the eyes as well. These attractions at last become second nature to her, and form a part of the art she expresses. So it should be with any art, until the elements become a part of one's very being, and not a robe to be donned on certain occasions, for then self-consciousness will interfere with the art itself.

There are many able professionals, as well as amateurs, whose facial contortions and mannerisms have greatly detracted from their really beautiful playing. I am not referring to defects born with them, but to the bad habits which their first teachers could have corrected. A wise mother is not satisfied with having her child taught only to walk and talk correctly. She endeavors to have it talk with ease and walk with grace (a gradual development of course), knowing that thereby the influence of the personality of the child when grown up will be greatly increased. One could not adopt a poorly-trained child at maturity and expect to make a perfect individual out of it. Neither can a teacher expect to produce an artistic pupil, in work and personality, who has had previous careless training, either in the art or in its mental or physical requirements. A great responsibility rests with the first teachers who lay the "corner stone" for us. Every little detail should be given careful thought. A perfect understanding of the pupil's temperament and needs is necessary, and an ability to inspire that pupil with love and trust ; for affection will go a long way towards keeping friendship and inspiring ambition when a pupil's faults are revealed to him.

Outward grace and beauty first attract us, as do beautiful trimmings and furnishings. And then we look deeper and discover the lasting foundations whose perfect measurements and splendid, solid material makes the outside beauty possible, and enables both to stand forever. The art of music lies safe within the hands of the first teachers who realize the importance of "all things both great and small," and then if all the "foreign teachers" will further fashion the material given them from such hands with equal reverence and faithfulness, the world will possess many more artists—artists whose art and all its accompanying effects remind one of a beautiful picture whose perfect framing has increased the beauty of its different forms and colors.

Music is a great paradox ; it gives and denies ; it consoles one for what is done irremediably, and makes one yearn for that which is unattainable ; it laughs in one's face at one's success, or ennobles one's failure, and, while comforting, dazzles one with triumphs beyond one's reach.

MONUMENT TO BACH, IN EISENACH.

A GLANCE AT MUSICAL EUROPE.

LOUIS C. ELSON.

During a short tour in Italy, France and England, made this Summer, I revisited some of the musical institutions which I knew in former days, and was able in some degree to note the symptoms of progress or of retrogression by observations made upon the spot. It is not my intention, in a short and discursive article, to give anything like an authoritative essay, but rather to note a few recent impressions made upon a musical traveler who has been many times over the European field.

People speak very glibly of Modern Italian music and of the Italian school, but it has become my impression that there are several Italian schools, and that some of the Italian cities differ from each other as much as if they were different nations. Milan and Florence on the one hand, Palermo and Naples on the other, are almost opposites. Milan has a constant succession of good operatic performances and an occasional taste of good orchestral performances and of chamber music. Even the general public there becomes critical in a marked degree. Naples, *per contra*, cares little for the intricacies of musical art, and accepts a happy-go-lucky succession of old works at the San Carlo opera house, and turns a cold shoulder upon instrumental music.

If the taste of a people is to be judged by its folk-song (as Robert Franz wrote me some years ago), then Southern Italy is not very musical. The voices of the people are raucous and harsh, and they sing the same old songs over and over again without any desire of change, until the patient traveler is goaded to insanity. Even the worm (and the barrel-hoop) will turn when trodden upon, and after one hears "Santa Lucia" and "Funicoli-Funicola" from morn till dewy eve, one comes to the conclusion that Southern Italy and Sicily is contented with a rather sparse musical diet, so far as popular music is concerned, and longs to slaughter the executants. A new song—"Alla Francese"—is beginning to become popular, and one dreads to think of how many thousand times the stranger will be obliged to listen to this before the Neapolitan will weary of singing it.

But the church music of every part of Italy is a constant delight to the musician, especially if he be an antiquarian. To study the Gregorian music in its home is something which is worth the while of every musical traveler, even if he has not the Perosi bee in his bonnet. At times one comes upon traces of true antiquity which ought to be preserved to the world. It is not generally known that what we call "Gregorian Modes," have been arranged and altered for us by Glareanus in a work called the "Dodecachordon," printed in 1547, and authorities are not certain as to the exact modes which Gregory and Ambrose established in the fourth and sixth centuries. Once in a while, in Cathedral or Monastery one comes across startling deviations from the progressions which we are prone to accept as true church modes. In Milan Cathedral they occasionally sing certain modes which may be the true Ambrosian chants, filtered down through the ages, in the city where the old Saint sang, and in Monte Cassino Monastery, high up on a mountain, isolated from the world, I heard some very impressive Gregorian chanting that was distinctly different from the conventional chants of the Catholic Church in America. To hear High Mass at 8 A. M. in a vast church in which one seemed to be the only worshipper, outside of the monks who were invisible, was an experience that was worth traveling across seas for.

I found less of the Perosi-worship in musical circles than I had expected. I doubt whether the nephew of the Pope is building himself a permanent niche in the musical repertoire. Certainly his works thus far are neither fish, flesh, fowl, nor good red herring; neither the solidity of the old nor the dramatic dash of the new school is in them.

Among the new composers in Italy I am glad to find Puccini taking the front rank. This is an Italian of Italians, and there is as much individuality in his work as in that of Verdi himself; indeed, I fancy that Verdi's mantle may fall on his shoulders; it would be a very wide misfit for most of the other young Italians. As regards that other prophet of the neo-Italian school—Mascagni—he seems to be a "single speech Hamilton," a man who made one hit and never after was able to repeat it. His "Mascheri" was still-born, and after listening to a series of mediocre operas, the Italians have ceased to expect further flashes of lightning from that cloud. It is said that he has betaken himself to fervidly enjoying the wealth that "Cavalleria Rusticana" brought to him, and that this is the cause of his subsequent failures and semi-failures.

The student of public school music can find a few points of interest in Switzerland. It is not that the children sing better in the schools there than they do with us, but they carry their music into their lives in a way that might be a lesson to our school children and their teachers. On Saturday afternoons one is sure to find many of the schools out on excursions; the steamboat and railway lines give them especial rates and they carry their luncheons along, so that the expense is at a minimum. Wherever they happen to be, on the deck of a steamer, forming a procession upon the street, gathering upon the summit of a mountain, or arriving at the rendezvous in the woods, they sing, and sing, and sing! They take pleasure in their choruses and carry their music

MONUMENT OF ORLANDO DI LASSO, IN MUNICH.

with them on all festal occasions, not merely making a study of it as is almost always the case with us. When we achieve something like that in our school-life we shall have made a pretty long stride towards becoming a musical nation.

In France I found a notable musical point in the celebration of the national Fete-day, July 14. Instead of producing a wild cataclysm of noises, the French enjoy themselves with music. Flying towards Paris, on the morning of the festal day, I noted the bands giving concerts in almost every town along the route. Arrived in the Metropolis, I found bands playing in every public place; not blatant military bands, but (very frequently) good orchestras who interspersed worthy music with occasional dances in which all the public joined with evident zest. Nor was this the only entertainment afforded; the Grand Opera, the Opera Comique, and the theatres gave great musical or

MONUMENT TO HUMMEL, IN WEIMAR.

dramatic performances *free* to the public. Thus the Parisian of the humbler walks of life, instead of setting off a dozen bunches of firecrackers and blowing on a tin horn, could celebrate his day of Independence by going to hear "The Huguenots" or "L'Aiglon."

At the Conservatoire in Paris the musician could not but note the earnestness of the examinations and public competitions. A jury of fine musicians, a good orchestra to support the competing soloists, an array of critics from the leading journals, were a few of the points I noticed, apart from the excellence of the hall and the partisanship of the audience which was largely made up of personally interested members, relatives of the contestants.

In London, one finds the operatic and concert season in full blast long after Philadelphia, New York, Boston and all American cities have ended their tonal matters. But as a whole, the London season, which ends after the middle of July, is not so vastly different from a New York one to merit especial comment. One finds all our old favorites upon the stage there and scarcely any more novelties than the Metropolitan Opera House would furnish in its repertoire.

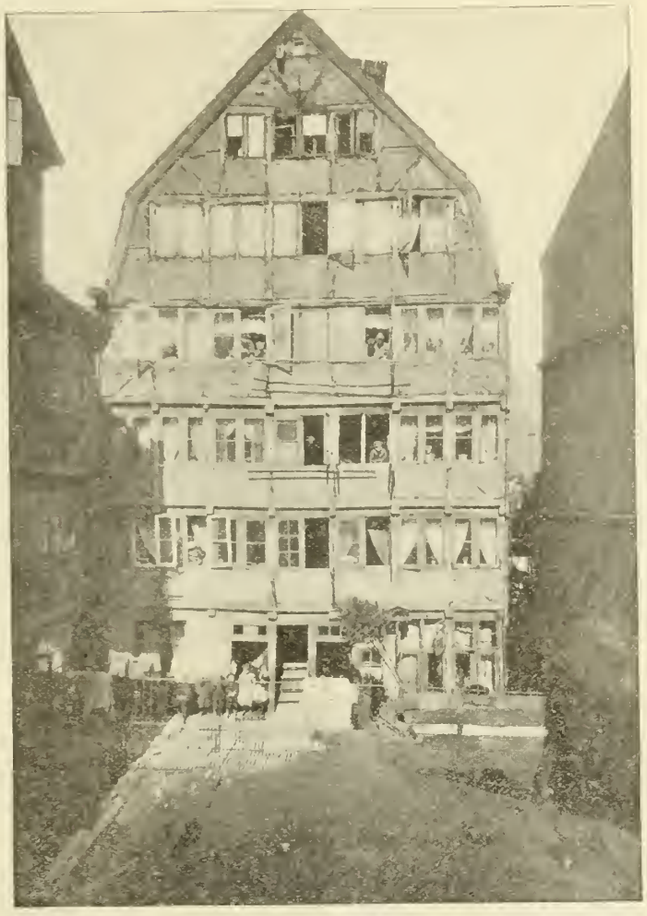
One last musical impression of a European tour may be noted. One cannot get across the ocean without hearing, or assisting, at a more or less awful concert, which takes place on shipboard for the benefit of the orphans of seamen of Liverpool and New York, and for the personal display of such talents as may be possessed by passengers who do not care to hide them from the world at large. Oh, Charity, what crimes are committed in thy name! One sits in a stifling cabin and hears "Annie Laurie" or "Home Again," intermingled with recitations that make one wish that the elocutionist might fall into the hands of the electrocutionist. The ship's piano is always in a state of general debility, and if there is an organ it "ciphers" with a persistency that adds a novel organ point to all its music. If the vessel strikes misty weather during the musical proceedings, the fog-horn adds an intermittent bass that temporarily obliterates the mild-voiced tenor and the the hesitant pianist at one fell swoop. Occasionally one hears a good concert at sea, but it is the exception.

EISENACH.

At the Wartburg—Bach's Birthplace—The Wagner Museum.

Eisenach remains an objective point to the traveller, for its famous castle, to enter which one must—as they did centuries ago—go in upon the old drawbridge, is daily visited by Germans as well as by foreigners. High up stands the castle and only an enthusiastic pedestrian enjoys the walk, a constant ascent, while as concession to tired children en route are its little donkeys for transporting travelers, each with a pet name; its photograph is taken away as souvenir. 565 feet above Eisenach is this ancient abode of Thuringia's Landgraves. Luther having found a refuge here, at the beginning of the sixteenth century, many souvenirs appertaining to his stay, are preserved there; his room, his table, chair and bed, as well as portraits of his family. All are memorials here of the great Reformer, who worked away at his translation of the Bible from 1521 to 1522. The tradition of St. Elizabeth is pictured upon the walls of the Wartburg and a fine mural painting by Schwind, a copy of which is printed in this issue, represents the famous strife of the Minnesingers. The faces of the prominent contestants are taken from life, being reproductions of Wagner, Liszt, Kaulbach and the artist Schwind. For it is an undoubted fact that here Walther von der Vogelweide, Wolfram von Eschenbach and other famous minstrels came as visitors to the court of Landgrave Hermann I.

Coming down from the Wartburg one passes the Wagner Museum—another cause for pride to Eisenach.



BRAHMS' BIRTHPLACE, AT HAMBURG.

The collection—embracing souvenirs from every period of Wagner's lifetime—was started by Oesterlein, in Vienna, bought eventually by Eisenach, and in this connection much amusement is caused Americans by a MSS. on exhibition there, in which fear is expressed that the collection may fall into the hands of the financially-all-powerful Americans. From the Leipzig. time of his birth down to his death (the death-mask being exhibited), is a marvelously detailed collection of MSS., letters, programs, photographs, caricatures, batons, etc., etc.

Bach's birthplace and his monument attract the Eisenach visitor, especially if he be a musician. This little German house is finely preserved, though a passing postman assured us that possibly eight families now occupy the building. His statue is simple but conspicuous in a part of the town through which visitors pass, and tiny children going to and fro to school must needs look up at it daily. As the train leaves Eisenach there is a fine retrospect of the Wartburg, and one sees the long, deeply-furrowed ridge of the Hörselburg where, according to tradition is the Cave of Venus, into which she enticed the knight Tannhäuser.

Not far from Bach's home is the Luther house, where Luther is supposed to have lived, in 1498, with Frau Cotta He not alone was a Reformer but an apostle of hymnody in language of the people.

It is not so important to insist and require from the pupil "much practice," as it is to insist and inculcate the habit of "right practice."

HANOVER.

It was in 1709 when Händel entered the service of the Elector of Hanover. His royal patron afterward became King of England, and the Water Music is the propitiatory offering the recreant knight made to appease his sovereign for his unceremonious leave-taking of service when he went to England, where Händel lived for the rest of his life, except one or two short visits to Hanover.

To the visitor in Hanover to-day the town seems small on arriving, after a visit to Germany's larger towns; but music haunts are many there, and a fine statue of Marschner stands before the opera house in a conspicuous position. For years Marschner, who died in 1861, was conductor of the royal opera. The monument was erected in 1877, its design being that of Hartzer of Celle.

The opera house is one of the finest in Germany and has seats for 1,800 spectators. The principal facade towards the George-Strasse is adorned with a handsome portico, under which there is a broad carriage approach. On the balcony above are placed statues of twelve celebrated composers and poets.

JOHANN N. HUMMEL.

Improvisor, Virtuosi and Composer.

In Weimar is a statue to Hummel. Born in Hungary, he spent the years, from 1820 to 1837, in Weimar. As one passes along the street to Liszt's home, the home of Hummel attracts attention by a tablet attesting the fact. There still reside members of his family, and a most hospitable welcome is proffered all who seek there associations of the well-known musician. At the time of the erection of this memorial in Weimar, the Weimar journal made the statement that "If Liszt be father of piano playing, Hummel is its grandfather." He was a pupil of Mozart, a friend of Beethoven and Liszt, and frequently played for Goethe. Among his own pupils were Henselt, Hiller and Benedict. In his Weimar home are still treasured many of his souvenirs; the pen with which Beethoven wrote his last symphony, a lock of Beethoven's hair and one of Goethe's, a quill of Herder, the piano that the Erard firm presented to Hummel; this is one o ocean wood, finely carved, with a broad piece of wood

MENDELSSOHN'S BIRTHPLACE, AT HAMBURG.

running underneath, from the front to the back, serving as a music-rest; the hammers and dampers are tiny. In the garret are other treasures, among them his harpsichord on which, in Vienna, he took his lessons from Mozart. His grandson and the cousins show the room there in which Hummel died and the garden in which were the many flowers he seemed actually to love.

In the foyer of the Metropolitan Opera House, at Hungary, is also a statue to Hummel.

At the Weimar home is his portrait in oil with those of his wife and two children. A street is named after him, at Weimar, and not the least of her proud boasts as to the many famous ones who have found her haunts congenial, is that relating to Hummel. To meet his descendants there is one of the most charming experiences a musician may have, so generously are facts told and memories related of his life, rich in associations with music's greatest disciples.

HAMBURG.

Of interest in connection with the illustrations in this number is the following sketch of Hamburg. Two great composers were born there—Mendelssohn and Brahms, and there also von Bülow was cremated.

A rich ship-owner, named Carl Laeisz, gave 1,000,000 marks for a concert hall, soon to be erected. At present concerts are held at Convent Garden, this season one of the conductors being Arthur Nikisch, well-known to American audiences.

A memorial is also to be erected for Brahms; sketches have been submitted and the money is ready, while Professor Max Klinger, of Leipzig, has been entrusted with the execution thereof. The monument will stand near by the Stadt Theatre, in the Ganse märkt. At the Hall of Art the three sketches are on exhibition and 60,000 marks is in the treasury for this purpose.

Now Hamburg is a thoroughly commercial city, and musicians there declare that before the statue is erected, there will be one for Bismarck. In early days Hamburg surpassed Berlin, musically, though now it is not so famous. Here, for eight years, was Schumann-Heink a favorite. Here, also, have sung Alvary, Klafsky, etc. Here von Bülow lived directing the Philharmonic concerts, now under the guidance of Barth.

Here, in 1678, the first theatre for comic opera in Germany was opened.

Bernuth is at the head of the conservatory here. In its fine concert hall stands a Blüthner piano, and around the wall are busts of the great musicians. There are many recitation rooms and a fine library.

In the Johanneum, or treasure house of ancient Hamburg, there stands a spinet with tortoise shell keys, and another with ivory keys—both in tune. Another treasure is an old trombone. The quaint tombstone, alluded to by Baedeker, on which is the picture of a donkey playing a bagpipe, is preserved here. Klopstock lived in Hamburg thirty years, and Lessing came to Hamburg to form a national theatre.

The family home of the Mendelssohns was among the patricians, but now the floor is a modest shop where are sold Fetwaaren (pork, cheese, etc.). On the opposite side there is conspicuously displayed the announcement:

GASTHAUS FELIX MENDELSSOHN-BARTHOLDY.

Above the entrance is a tablet with his portrait and an inscription; the buildings about are occupied by stores, and the once aristocratic surroundings are now busy with daily traffic of the poorer class.

Not far away, in a narrower street of still humbler pretensions, is the house wherein Brahms was born; the quaint houses with gables and red-tiled roofs still stand on the right-hand side, while on the left side of the street all such have disappeared and less picturesque ones of modern pattern have been erected. We passed many a tiny shop, in which bread and cheese were sold, before we arrived at number 60; and, indeed, there was only a long entrance to an alley, which led to Brahms' birthplace, a house to the rear of the others. No tablet yet marks the spot, but the occupants tell of the room, on the second floor, where Brahms first saw the light of day.

Picturesque "Vierländerinnen" are constantly met; they are peasants, from the four islands nearby, and wear short skirts and an enormous bow at the back of their large flat hats. Soot everywhere.

BACH'S BIRTHPLACE, AT EISENACH.

THE SINGERS' STRIFE, FROM THE WARTBURG, AT EISENACH

THE MUSICIAN'S WORLD.

The world of the musician is entirely different from this world of reality, but it throws a startling, unescapable light upon realities; it is the world of romance, but it presents the realism of improbable dreams, and what can be more realistic than that? We delude ourselves with "realities." Thought is the only real thing in the world, and though we can enter through our hearing alone, music is essentially a world of thought. All other possessions and pleasures are mockeries.

UNSELFISHNESS.

FAY DAVIS SIMMONS.

"Give unto another what *his* life desires, not what yours has had or missed."

Every student should study, play, and interpret the grandest and best in music—he should ever keep before him the highest standards. He should remember, however, that just as it is with religion, which is used and taught in different ways and degrees in order that the different needs of God's children may be met, so it is with all kinds of music—each kind has a different effect upon the redemption or enjoyment of those who are either in the highest or the lowest walks of life. Though the world is becoming more enlightened, and therefore better, each day, still there are many uneducated souls who could not enjoy nor appreciate a classical selection of music or the singing by any one of our high-salaried church choirs; nor could they be appealed to by religion as it is preached in elegant, eloquent language from many pulpits. We all know that the Salvation Army, with its peculiar presentation of its doctrine, with its songs and band music, has converted and saved many hardened sinners who would have scoffed at a more refined religion and refused to listen to more scientific music. Just as a child at school is educated gradually—beginning with simple stories and advancing to the classics—so must we endeavor to do likewise in religion and music.

There are many people, though, who seldom have an opportunity for a gradual education of taste. To them we should give all the pleasure which lies in our power to give, according to *their* understanding and not our own.

The following incident will explain my meaning. I found that a pupil of nine, who was having her education paid for by a self-denying father (a very poor farmer living in the country) disliked to go home because her parent longed eagerly to have her play on "that horrid little reed organ in the corner" his long-loved hymns and the songs of long ago. A Beethoven sonata would convey to him no more meaning than would Greek to a child; yet his daughter would not "descend so low" as to play his favorites for him. Dear girl you would not be descending, you would be ascending! The divine music you love so well should teach you, first of all, how to open your heart to another's needs, for its glorious harmonies reveal all the depths of the human heart—love, anguish, grandeur, sweetness, faith, hope and charity, "and the greatest of these is charity." The music your father longs for he understands. It speaks to him of all his joys, and also of all which he has missed from his life, but which he has striven to give to yours. Those old hymns are associated with his childhood; their strains recall his manhood, and blend both into his old age whose memories are his greatest happiness. The melodies lead him into the unseen land where earthly and heavenly harmonies will blend forever.

Let us all endeavor to be artists, to stand shoulder to shoulder with the most worthy exponents of the art. But above all let us become nobler by its teaching, and more unselfish by the power and might of its elevating and beautiful influence. Then we can "divine what each soul needs" and give to no one a stone when he asks for bread.

RICHARD WAGNER AT HIS VILLA, NEAR LUZERN.

RICHARD WAGNER AND THE NEW PRINZ REGENT THEATER IN MUNICH.

FREDERIC S. LAW.

Wagner's early life was in marked contrast to that of other great musicians; he showed no musical precocity whatever. As a child he took lessons on the piano, but was wilful and negligent in practice. He never even learned to play a scale with the proper fingering, and in after life his poor piano playing was a source of merriment to himself and his friends. Though one of the greatest masters of orchestration that ever lived, he could play no orchestral instrument. His musical awakening dates from his sixteenth year when he first heard Beethoven's symphonies and overtures in the Gewandhaus Concerts in Leipzig. Their effect was so overwhelming that he resolved to become a musician.

He was greatly averse to sitting for a picture. Consequently, there are not many of his numerous portraits which were taken at first hand. The one accompanying this article was recently procured in Bayreuth. The writer was assured that it was one of the most characteristic, in that it had not been idealized or retouched in any way, which is the case with a great many. It is not generally known, but is considered one of the best by those who knew him. "*So muss er ausgesehen haben*"—"So he must have looked"—said the clerk who sold it, and one can well believe it. The easy, careless attitude—heedless of temporary confusion of attire—the expressive face, the characteristic costume show neither premeditation nor stiffness.

It was taken at Triebschen on Lake Lucerne, and bears the date 1869 when he was fifty-six years old. His sojourn in Triebschen marks one of the happiest and most productive periods of his life. It was there that he finished his *opus magnum*, "The Ring of the Nibelung," and his one comic opera, "The Mastersingers of Nuremberg." Both of them had been projected many years before, but manifold discouragements had prevented their completion. He had been fairly driven from Munich by the jealousy and bitter feeling excited by the favor of the young King of Bavaria, Ludwig II. His project of a special theater for the "Ring," in particular, met with so much opposition that he decided to leave Germany in order to spare the King the embarrassment of his presence. After a stay of six years in Switzerland, he returned in 1872 and made his home in Bayreuth to superintend the building of the Festspielhaus, which has made that little Franconian city second to none as a musical centre.

The recent opening of the Prinz Regent Theater in Munich, is one of the most striking instances of the revenge which time sometimes takes on partisan feeling and passion. It was built under the patronage of Prince Luitpold, Regent of Bavaria, with the avowed purpose of giving ideal performances of Wagner's operas, and after the very plans which he drew up with the approval of the King less than forty years ago. Then Munich would none of Wagner; he was considered a dangerous, visionary fanatic whose influence over the King was of the most dangerous character. Now, in no city is the Wagner cult prosecuted with more vigor.

The new theater is delightfully situated in a park on the right bank of the Isar and contains all the special features which have made the Bayreuth Festspielhaus heretofore unsurpassed for musical and scenic effect, together with some additional advantages gained by experience. Like the other, it is not a large theater; its proportions are the same, but it has fewer seats—1028 as against 1344, in both cases exclusive of galleries—larger and more comfortable, while much more space is given to passages and exits, in which the Bayreuth Theater is deficient. The stage is enormous, being more than twice the size of the auditorium; it is supplied with the latest appliances for stage mechanism, some of which are original with the architect and his assistants. The whole undertaking is due to the energy of Herr von Possart, the director of the Opera at Munich, and to the liberality of the Prince Regent, who gave the project the financial support, the lack of which nearly caused the shipwreck of the Bayreuth scheme. This was only placed upon a firm basis by the production of *Parsifal* in 1882, after the theater had been closed for six years after its opening with the *Ring* in 1876.

COSIMA WAGNER.

Naturally, the Prinz Regent Theater is regarded with no favor in Bayreuth; it is considered a dangerous rival in the field which has been so long occupied by the Festspielhaus. In Munich all intention of rivalry with Bayreuth is earnestly disclaimed. Care was taken not to interfere with it either as to season or repertoire. The latter was confined to works which had not been given in Bayreuth—*Die Meistersinger*, *Tristan und Isolde*, *Lohengrin*, *Tannhauser*—and it was not opened until August 21, directly after the close of the season there. *Tristan und Isolde* was particularly interesting to the many Americans present, since Lillian Nordica sang the part of *Isolde* The season lasted a month, but it is not the intention of the management to keep the theater closed during the rest of the year as is the case with the Festspielhaus at Bayreuth. It is to be open during the winter for performances of the classic drama at popular prices. The Wagner season will be a yearly feature, beginning at the close of the Bayreuth season, so that the two need not necessarily conflict with each other.

All this goes to show that Wagner's influence is not waning, but rather increasing. Twenty-five years ago, after the *Ring* was given for the first time in complete form at Bayreuth, predictions were not wanting that it would never have another complete performance, either there or elsewhere, and for a time there seemed some ground for such an opinion. The financial outcome was so disastrous that the scenery and stage effects had to be sold to satisfy the creditors, and the theater was closed until *Parsifal* rendered it possible to open it again. Now the *Ring* is not only the surest card to draw large audiences to Bayreuth, but is heard on all the principal stages of the world.

After all, Lowell is right when he makes Hosea Biglow say: "Don't prophesy, onless ye know."

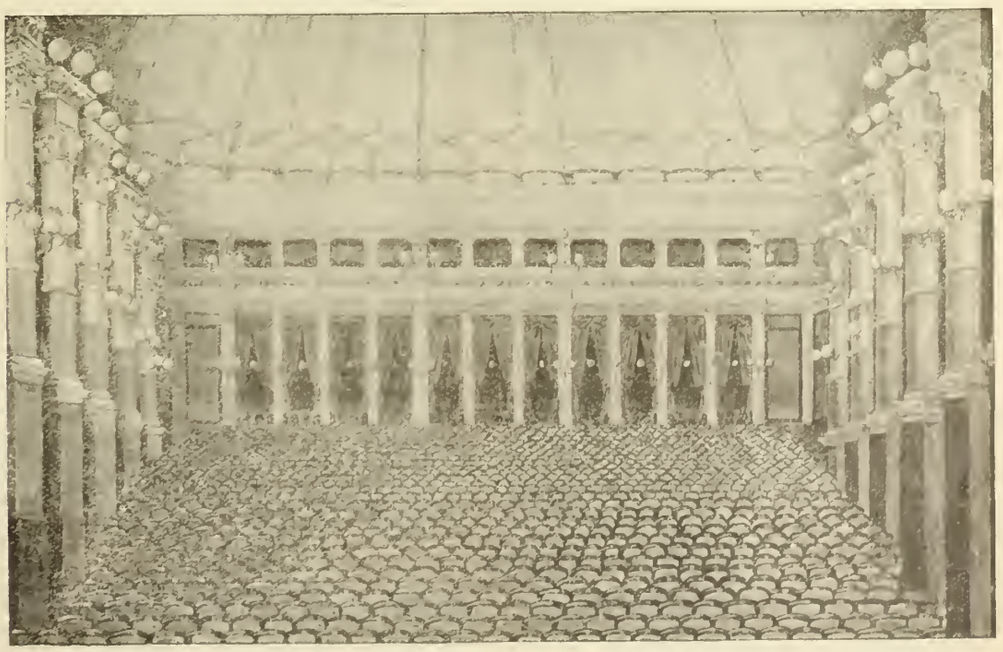
AWAKE.

"Awake!" said the sunshine. "'Tis time to get up.
Awake, pretty daisy and sweet buttercup.
Why, you've been sleeping the whole winter long.
Hark! hark! Don't you hear? 'Tis the bluebird's first song."

"Awake!" call the streamlets. "We've lain here so still,
And now we must all go to work with a will."
"Wake!" said the warm little breeze; "and you, willow-tree,
Come put on your leaves in a twinkling for me."

—*Selected.*

The music a people depends upon their mental and moral development. The advance a people may have made in civilization may easily be determined by the means they use to awaken their feelings, or to gratify them. In the range of fine arts, music and poetry occupy the first place; the latter is the communicating medium of the mind; the former of the soul. All poets of antiquity were musicians. Music without poetry, poetry without music, were things unknown.—*Mainzer*



INTERIOR OF BAYREUTH THEATRE.

AT LISZT'S HOME IN WEIMAR.

PAULINE APEL.

We were in Weimar together—two American women, one a student of literature at the Göttingen University, the other, a musician; each was seeking there objects of interest, different from the other; one, those appertaining to Schiller and Goethe, the other, those appertaining to Franz Liszt, though of course to both, all appealed in a degree. To readers of this page no doubt, interest in that lovely town centers about the little house, the Hofgärtenerei, No. 17 Marien Strasse, in which are three rooms full of objects connected with the life of Liszt. These are shown to visitors by Frau Pauline Apel, whose photograph was sent especially for this page of THE MUSICIAN with the following inscription:

"A souvenir from the Liszt Museum at Weimar, sent by Pauline Apel, for thirty years the servant of Franz Liszt. As a girl of fourteen years old, I came to the Princess Wittenstein, the friend of Liszt; but as I always waited upon him formerly at the Altenburg, so from 1869 to 1886 I kept house for him at the Hofgärtenerei 'till his death. All now is past—only the beautiful memory rests with me. And now, with particular interest, at the Museum, to strangers who visit it, I tell of all those fine days I lived to see."

(This same photograph was secured last summer for an historical museum abroad, as of interest in connection with the famous musician)

When Frau Pauline first opens the door to visitors, one's glance rests immediately upon Liszt's fine piano, a Bechstein grand; another, an upright, stands near. Beside it is his reclining chair, and his bust before which are placed daily fresh flowers ("He loved them so in life!" explains Frau Apel). On his desk, stands as ever formerly, Von Bülow's photograph, a guest-book, the last notes of music he wrote, a paper weight made of an elephant's tusk, photographs, books, and pictures abound, conspicuously among the latter, Munkacsy's famous picture of "Christ before Pilate." In his bedroom hangs the well-worn velvet jacket; at the bedside the picture of St. Franciscus, his patron saint. The dining room is now turned into an exhibition room; exquisite gifts are there shown from kings and emperors; a line of music with "Hail!" in Hungarian, from Bettina von Arnim; letters from Heine, Joachim, and many other famous ones; manuscripts, canes innumerable ("He never used them," says Frau Apel, "for ladies and gentlemen were always hanging upon his arm!"); pipes of all sizes and patterns; reliefs of Clara Schumann and of her husband Robert, and of Chopin; death-masks of Beethoven, Weber, Chopin and of himself. A fine portrait of himself by Ary Scheffer hangs upon the wall.

In 1902 or 1903, a monument, by Hahn, of Munich, will be erected near the house. At present in the Weimar City Museum, is to be seen a design, which gained the second prize.

In leaving, after viewing the many photographs of Liszt's famous pupils, one of the American guests, a student at Dresden, shyly asked for a flower from among those placed before the bust of the Meister: "Gewiss!" exclaimed Frau Apel, and bustling about she presented each of us with one, another souvenir carried back to the Erl Prince Hotel, which announces with pride, "Here, Franz Liszt first made his home in Weimar."

'Tis but a narrow line divides the zones
Where suns are warm from those where suns are cold,
Twixt harmonies divine as cords can hold
And torturing discords lie but semitones.

—*Helen Hunt.*

THE SELECTION OF TEACHING MUSIC.

HAMILTON C. MACDOUGALL.

This is the most discouraging, wearisome, time-consuming task the piano teacher has; experience only can supply him with a list of good teaching music, classified and suitable for all grades and kinds of pupils.

But though it takes time to get a practical knowledge of music fitted for pupils' use, it by no means follows that a teacher can do nothing to hasten the happy day. On the contrary, the day will never come if he does nothing in preparation for it. I remember very well what struggles I had during my early teaching years and how much easier and more satisfactory my work became when I had worked out a practical scheme for the prompt and sensible selection of the next piece or etude. My experience may possibly be of some benefit to others; if it be so I shall be very glad.

In the earlier stages of teaching the main idea is the selection of pieces that the pupil will be able to learn and play well, that he will like and that will be graded with some care. I take it that it is impossible to choose lesson material very far in advance of the time of using; at any rate, if it be possible it is not wise. "Courses" may do well enough for the Woman's Club or the Chautauqua Circle and the like, but individuals can expect little from a "course" planned to cover an extended period. The truth is, that for technical and musical advancement the question the teacher should ask, is not "What is an interesting and good piece for this pupil?" but "What sort of a piece will do this pupil *technical good?*" May I relate, with some minuteness, my own methods and ways of thinking in this matter?

After I had taught a few years and found a few pieces that had a positive technical value and were a source of inspiration to students I catalogued them in this way: I bought a blank-book, about seven by nine inches in size, and devoted two pages to each pupil. At the top of the left-hand page I wrote the name of the pupil. Below, as they were given to the pupil, I wrote the correct titles of the pieces, adding the retail price and the publisher's name. Often editions differ materially and the teacher is caused much annoyance if the pupil does not bring the right copy. On the list the author's name will more conveniently come first and, when it can be easily done, the date of the assignment of the piece.

This will represent the pupil's work from the beginning and from it can be traced his steady growth in technique, in appreciation of good music and in knowledge of musical literature. The teacher can easily remember (or ought to) how the pupil liked the work, whether it brought about technical advancement, or whether it was about the right grade. There was another list of pieces put at the end of the book, perhaps two hundred and fifty in number (exclusive of the standard works like Sonatas), arranged by authors alphabetically. At the end of the book I had a rough but ready index.

This book proved its usefulness in many ways. It enabled me to keep a firm grip on every pupil's past musical history and also helped me to keep the ship always pointed towards port. Every busy teacher finds it difficult to remember what things pupils have studied; the teacher even may forget that a week before he had planned a vigorous campaign against some technical fault. To amount to anything at all, a teacher's work must not only have continuity and cohesion, but his plan must be elastic enough to allow for excursions on side-paths. When a pupil comes into the room I turn to her page in the book and have the whole story before me.

Pupils are of various types, but the types are comparatively few in number. There is the pupil with no positive technique; the pupil with velocity but no singing touch; the pupil with singing touch and no velocity; the pupil who plays conscientiously but with true New England stiffness; the pupil who plays objectively only, and many other types. As soon as a pupil plays for me a few times he falls into one or the other of them; all I have to do then is to find a page devoted to a pupil of that type and see what I did for him.

It seems absurd, but it is true, that a real difficulty in teaching pupils who know each other is to so give them pieces that neither shall be able to "get a line" on another's work! Teachers have often gotten themselves into trouble by giving a certain piece to A six months after B (who is A's cousin) has had it. A's fond mamma at once jumps to the conclusion that the teacher considers B "more advanced" than A and trouble at once ensues. Both parents and teachers are often afflicted with the notion that every piece given should be a little more difficult than the piece that preceded it. Civil war is avoided by the use of the blank-book.

The blank-book will serve as a sharp reminder to the teacher of effective pieces. Is it not every teacher's experience that a good many pieces of great value are forgotten by the teacher and remembered by him only as he chances to see copies in the music store or as he hears them in a neighbor's studio, or as he sees them on programs? Teachers may have a "run" on pieces like Raff's "La Fileuse" or Chaminade's Prelude in D minor or Godard's "La Rouet," but lay them aside after a season and forget all about them. The blank-book oviates all that.

The blank book has still another advantage. If there is one fault in teaching more prevalent than another it is the fault of giving too difficult pieces and etudes. This is the result of an optimistic enthusiasm on the part of the teacher or of conceit on the part of the pupil and his parents. The best teachers will overestimate a pupil's powers occasionally and give, for instance, the Beethoven Sonata in E flat, Op. 3, No. 3, when they should have contented themselves with the first three movements of Op. 2, No. 1. When a teacher finds himself in this predicament he must leave the piece half finished. As the pupil comes, lesson after lesson, and the blank-book is opened to the proper page week after week, the teacher is reminded of his errors and will naturally mark the piece "review" or "give again." It often happens, too, that pieces or etudes, while at first worked up to a playing pitch, are still susceptible later of improvement. A note against the piece in the blank-book secures the proper attention. The importance of reviewing has never been fully appreciated in music teaching; it is much more important that old pieces should be gone over again and again, than that the pupil should be kept hopping and skipping from the last piece by Chaminade to the last piece by Some-one-else.

And this brings me to the principal objection to this whole scheme, viz.: that it gives the teacher a limited teaching repertoire. This objection is more fancied than real, since any teacher's repertoire must, in the nature of the case, be limited. But let us treat the objection fairly. Is it not better that the teacher should limit his teaching to three hundred pieces than to spread himself thinly over ten thousand? I have excluded from my consideration that teaching which aims to give knowledge of musical literature and confined it to that teaching which aims to give technique and musical development. A teacher with a limited repertoire can prepare his lesson much better and teach much better what he does teach; is more likely to be able to give the pupil a well-played pattern.

But, if all this is conceded, it still remains to be shown that the blank-book method does not result in a fixed repertoire for teachers. No, not at all! Every year the better composers—Chaminade, Schuett, Sinding, Grieg and others—add to the stock of the teacher. The less successful pieces on the blank-book lists may be dropped and the more successful ones among the newer compositions added. Additions to the lists, however, should be made slowly and only after the newcomer proves its right to the admission. On the whole, no idea could be more mischievous than this: that a teacher ought to give to his pupils the newest compositions of all the best modern masters; a teacher who has that idea will lose his head and become a helpless, useless sort of person; the teacher ought to know the new things, but they should be for personal consumption only.

Any teacher who has had five or six years of ample experience in teaching the piano may justly conclude that, if he finds the selection of music laborious and time-consuming, something is wrong with his methods

The river carves a channel to the sea,
The channel holds the river in its way.
So Habit carves the course of Destiny.
We are to-morrow what we will to-day.

—*Ernest Neal Lyon.*

Bach, in his extreme old age, in answer to the question how he came in possession of his great learning and the inexhaustible storehouse of ideas, replied: "Through unremitting toil have I obtained the preponderance for which you have credited me. By constant analysis, by reading, by reflection, and much writing I have continually improved—this, and this only, is the secret of my success."

The Voice

MR. FRANK HERBERT TUBBS, Associate Editor.

With this issue we continue the series of answers to inquiries. We have been running articles of a pedagogic nature from which material for study has been derived. Now we purpose giving a very practical trend to this department by answering questions sent us by teachers and students. This instalment shows the helpful character of this department. We will welcome inquiries from all who desire help.—Editor of THE MUSICIAN.

INQUIRER'S DEPARTMENT.

FRANK H. TUBBS.

Can one become a great singer by study in the music department of a college?

One becomes a great singer by developing the gifts of voice and music which are his by and through everything which makes him able to express himself. It is not the school, the teacher or the method which makes the great singer. It is the man himself. If it is in him and he has that control of himself which allows it to come out he will be a great singer. The school or teacher point him his path and keeps him walking in it till he can go alone safely. To answer the question above and be a help to the inquirer, it is best to answer two other questions: How have great singers become such? What help can a college give?

The course taken by Sembrich, Melba, Nordica, Eames and others who are in the first rank has been much the same. It consisted of getting musical education, training the voice, adding to experience, seizing opportunities and being steadfast. They had no more natural gifts than have thousands of others. None of these gave evidence of greatness at the start. It is said that Melba, when she gave her farewell concert at Melbourne, just before she started for Europe to make her way in the world, had just three in the audience. Nordica, in her first concerts around Boston, showed herself to be a pretty singer but no better than many others. When Sembrich sang first in America, and that was after a goodly degree of European success, she was very moderately great. Now they are the leaders of the world—the Queens of Music. How they have done it is told in the course outlined above. Hard work and harder trials have made them what they are. Work and trials such as they have mastered have crushed the ninety and nine.

The college is a good place for getting musical education. The atmosphere is studious; the equipment fine; the teachers good; the discipline excellent. For its purpose and place it is ideal. A young student has such a chance there as he cannot have elsewhere for its purpose. But a college cannot make a great singer. The nature of the case prevents it. When singers are made to conform to a system graded for the majority, it is impossible to bring out the individuality which is indispensably necessary in the great singer. All education systems are based on leveling. Students who have little talent must be brought up to a level. Specially talented pupils cannot be allowed to run far ahead of the class. This compels a level of goodness or of mediocrity. Yet, the training in the college is just what is needed for education. Every great singer should (and if he is great in the best sense, must) be a musician. He must play the piano, understand theory and composition, history of music, and must know how to learn. No place is better for such preparation than the college. When he has gotten a start in these he should get out of the college to be made a great singer. He goes into the world of experience. In that he will meet some private teachers who will help him. Not one teacher but several; not in a small city but in the large cities of America and Europe. Every musician he meets and hears becomes for the moment his teacher; every business he touches will make its lasting impress. All combine to call forth the great singer which is resident in his individuality. No one thing or person will do it. The individual does it for himself and every one who has the talent can make himself what he will.

●

When a singer takes part in an orchestral concert, is it the director's right to choose what music she shall sing?

Without doubt the director has the right to decide upon the music, but he would be a daring man who insisted that any given music should be chosen, except when a large work, like an oratorio was to be given. The director always consults the singer about what she has all prepared. He generally finds it to his advantage to use what the singer chooses. One can understand that this way may often interfere with symmetry in programme. A director, having time for consultation and knowing that a singer is capable of singing any certain work, often asks that the work shall be prepared. Programme making is an art and the different selections should be placed so as to present contrast, and at the same time they should harmonize with each other. The interest of the audience must be consulted. There are conditions of hearing that a good programme maker has in mind. For instance, with one kind of audience, the kind accustomed to serious music, would like to have the strongest pieces at the end of the programme. This would only tire a different audience. The other kind of audience must be served its heavy music while it is rested, and at the end of their programme can come the lightest music. If a singer cannot sing music in keeping with any part of such programme as the director is preparing, he cannot be used. To keep the symmetry of correct programmes, a director must command the whole of his forces.

Every artist (singer) has variety in his music. Several selections are worthy place in any programme and from his selections a director can easily make choice of something suitable.

Happily for music lovers there are very musicianly solo numbers at the command of good singers. There are many to which singers must give very deep study. First reading will not suffice to show their greatness. Recently I heard Bemberg's "Hindu Chant" sung in a way which showed the singer had only gotten notes and words but had not realized the greatness of that song. It, like many others, depends upon the expression of the singer. One who can learn such music quickly is a delight to the director, for he can call for what he wants to make up a musical bouquet. It is, certainly, the privilege of the director to insist on the kind of music which he wants.

●

Is "musical sense" allied to the five senses?

No, happily it is not. The five senses are physical while "musical sense" is intuitional. Music is that which appeals to the soul and is expression of soul. It is a "sense" of the mind. On this account its revelations are mental and intellectual. We often hear of the "sixth sense." That cannot be a physical sense. The latter are known and fixed. The number cannot be increased or diminished. The mind has its senses. Some correspond to the physical senses. For instance, one "sees" with the "mind's eye." It is actual sight and the things which are revealed to that vision are more likely to be true than are the things revealed by the physical senses. "Seeing is believing" has been proved false many times. We think we see and hear aright, but how often we are deceived. The finer senses of mind which do correspond to physical senses are more to be relied upon. But beyond these are senses which stand by themselves, which are of a high order because they are those of the soul itself. We often speak of them as intuitional. Musical sense is very high in the intuitional senses. It sees, hears and feels all there is in good music. It is possessed by all and can be cultivated very greatly. It enables one who has developed it to reach into the things of greatest beauty and to use music for his highest soul-growth.

●

Shall I advise my pupils to sing in a choral society? Why do some teachers object to it?

It is of unquestioned value for pupils to sing choral music. No teacher disputes that, but some teachers object to having their pupils sing in choruses, because they fear they will hurt their voices. Many times I have questioned myself upon the reason of the objection and I admit that I have sometimes sided with the objectors. Students are liable to overwork in choruses. Some sing too loud and none attend to tone placing while singing in the chorus. Then, there is nervous exhaustion from singing with others which can hardly be avoided. The latter gives the most serious objection to chorus singing. It can be guarded so that it is reduced to a minimum and that is the best that can be done. But, in spite of all objections, there are so many things to gain from chorus singing that they outweigh all objections. The first of these is that one becomes expert in reading music and in understanding the large compositions. No one ever succeeded as a solo singer who lacked independence and education. They must be obtained, no matter what may be the expense. The temporary injury to voice, if such there be, is not too much to pay for the facility and education to be had from chorus singing. No matter how good the solist may be as a soloist, he will fail at many points if he relies upon that alone.

Under the direction of a good director, one who understands voices, there will be little danger to voices. We need a training class for directors. Choral societies are increasing in number and there should be a school for preparing directors for their work.

Teachers should give their pupils opportunity to study concerted music under their own direction. Organize quartettes for mixed, male and female voices, and train them. Many pupils expect to take choir positions and so far as solo singing goes they can fill places. They are often deficient in experience in quartette singing. There are duties to students which are often neglected. We have no right to leave students incomplete in their requirements. It is as necessary for them to sing quartettes as it is to make good tone. We attend to the latter and neglect the former. Any objections like those raised against chorus singing do not apply to quartette singing. There is not so much to be said in favor of quartette as of chorus singing, but both kinds should be engaged in for the efficient preparation of the singer.

●

Can one sing within ten or fifteen minutes after eating and not injure the voice?

Yes, one can do so, but it is not good practice. When the stomach has received a large quantity of food the powers for digestion are called upon to act and they hasten to the stomach. Much of this force, notably in the nerves, is also needed for singing. It should not be called upon to do double duty. It is best therefore to let digestion be well advanced before taking up singing, as a rule. It takes from a half-hour to an hour to be quite ready for singing. But people differ in digestive power. Some opera singers will not eat for hours before a performance while others like to rise from the dinner table and go directly to singing. Some of them even have food at the theatre.

One reason why it is generally best not to sing immediately after eating is that the singing may hinder digestion (because it calls force away from the stomach) and if digestion becomes impaired *that* will hurt the voice. At least, it will render the voice ineffective. But to sing occasionally after eating, will do no harm either way.

●

Will faulty connecting the registers really hurt the voice and is it difficult to overcome?

A voice in which registers are not well connected is already seriously injured. If the voice is used in the same way, without uniting it properly, it grows worse and must eventually be so disjointed as to be unfit for expression. The real purpose of singing is to express. If a singer is watching for the breaks in his voice, he can give no attention to expression. In this connection, although it is not included in the question, it may be well to say that if one can perceive changes in quality of tone as he sings up the scale, there is evidence of weakness which will grow more and more pronounced and the different kinds of voice will become more apparent. Inability to sing a scale in the same quality of tone is often the first warning to the singer that he is using wrong method and it is a warning which it is best to heed. The points of change in the ladies' voice are at about F in lower voice, B in the middle and E at the top. The weakest notes are from B up to E, the notes of the upper medium voice.

It is not hard to overcome this fault if one works in the right way. But without a teacher a student would be sure to use a wrong way. The right way includes adjustment of all parts of the voice so that every one

does its work correctly and in its proper time. It will be seen that that might include the whole of voice culture. The great regulator of the voice is breath control. Seek that and the larynx, in which the breaks are made, is quite sure to take its right place. With these two all right the adjustment of the whole is easy. I have known a severe break of many years standing to be overcome in a half-hour. But that was exceptionally quick. A few days ought to be long enough to overcome appearances of change if one works right.

Often we hear public singers in whose voices most serious division of registers exists. It was said of one well known contralto that she had five voices. It might have been overcome but perhaps she liked it. The cultured listener did not. Yet, there were some singers so foolish as to try to imitate it. Nearly all untrained contraltos carry the chest voice too high and then there must be evidence of change of register. It is the first duty of a teacher when he gets such voice, to get the pupil to make the change of register lower. In most voices it should be at E flat. Never should it be higher than F. If it is not brought down to its proper place the voice is wrongly used and will grow to be harsh and discordant.

●

How can a teacher enlarge his business in a small city?

If one could answer this question he would be wise to protect his way by patent. Yet, as the question is one which might come from many, and as the patented way might apply to but a few, it will do no harm to make some general statements. They are but opinions. If good, the teacher who asks the question and others who see any worth in them are welcome to them. As they are opinions let me adopt the personal pronoun. I believe the secret of success lies in making acquaintances and in keeping the list enlarging. I know of no other way to increase business. That is, ways are details comprised in this. Of course, one must be a teacher and know music. He must be able to get results in voices. He must be a person of dignity and character. He must have some knowledge of business and be of good address. These are the details. With them he must present himself to the people. His duty becomes plain. Ways of meeting, personally, the people and of opening up new circles must be devised. No man has exhausted his field of work. In every city there is more work for every one to do if he will devise ways of getting himself into the acquaintance of more people. It surprises everyone who tries the experiment of making a list of the people whom he knows, to find how small his list is. To the teacher who asked the question, I put this one: Do you think you have speaking acquaintance with 500 people? Have you with 250? Have you with 100? Yet your city has over 30,000 inhabitants. You may think that the people know you and that that is enough; that they have seen you in your church choir, at your choral club and walking the streets; that they have seen your name in the paper frequently. That may be true. These things are all good in their way and for their purpose, but they are not the things which really bring business. They pave the way but you must walk over the pavement to them. You must bring your own personality to bear upon the people. Get so you know people by name, are acquainted enough to shake hands with them and to invite them to call on you. That is what tells in getting business. How to get among people must be decided differently in different places. It may require some little scheming to be able to do so. The church, lodge, music club and such gatherings allow you to meet groups of people. Use those and lead from those into other things. To get through meeting all the nice people in a city of 30,000 inhabitants will take many years, but in doing it you will find all the business that you want will come to you. Personal characteristics and personal activity will do the work for you. Circulars by the thousands will not do so much as a few hours a month given to meeting people personally.

●

What are termed "frontal tones?"

My answer may not be the generally accepted one, because a term may mean one thing to one teacher and another to others. It would please me to have teachers send me word if they differ from me in this meaning of the word "frontal." The bone of the forehead is called the frontal bone. A tone reverberated far back in the mouth seems to penetrate up through the middle of the head and come out through the forehead. Such tone is called a frontal tone by many teachers. Making tone in this way elongates the vertical dimension of the pharynx by depressing the larynx and raising the soft palate. That part of the voice apparatus is then reverberated generously and the tone, instead of coming forward and flooding the mouth and nasal chambers of resonance goes, as said, upward and then forward. We hear such tones used by baritones and basses generally. They are sombre and often gutteral. To most ears they are uncouth, but they are large and because of that please the singers.

●

If it is possible to become what one wants to, why is it so few attain perfection?

That question is culled from a letter which criticises the idea that "all things are possible to them that believe." In other words, the tone of these writings has been "Within you are capabilities far beyond what you thought to be there, and if you would exercise yourself you could become anything." Now, we are taken to book. The question is sent home. Can it be answered without dodging? Must the stand formerly taken be abandoned?

First, why do you say "so few attain perfection?" Do *any* attain perfection? What is perfection? These forms of the same question contain their own answers. Perfection is something which does not and cannot exist, simply because what seems perfection to-day is found, when attained, to be only a pointer toward more and better. To me something is perfect; to you who have more experience and know more than I do, my perfect thing is very faulty. My perfection is not your perfection. When I learn what you know mine is no longer perfect. Perfection has gone to the horizon and vanishes as we approach it. In this way we can understand "There is none perfect—no, not one."

Change the question to "Why is it so few meet their expectations?" and we have something to answer. Words come thick and fast for answer but sum up in this: Everyone places upon himself limitations. Some are discovered and removed while others seem too big to remove. They appear as prohibitive circumstances, controlling surroundings, life's duties, and the like. To each these seem so real as to be insurmountable. They are pondered upon till they become actual. In truth they are self-imposed limitations, and they are what prevent attainment. Every one shakes his head and says, "Mine are real. What can I do without money and friends?" There he then sits and won't try to do anything until money and friends surround him. And they never do that. If they did the poor one would not be capable of using them. Money and friends are to be made and can be made by everyone who has enough knowledge of the true self—the real man—to be able to use these means when he gets them. The stories told to young people to spur them on, about those who have made their own way to successes, are not "fairy tales." They are real life stories, and they are being lived every day, all around us, but we are so dull, stupid and blind that we cannot see them. Sometime we will hear them talked about but we will sneer and say "fairy tale!" when in fact we were in touch with the very thing itself and didn't know it.

Waiting for "something to turn up," is the most unprofitable thing that can come into life. There are a great many "Macawbers" and that disposition prevents attainment.

That which is the most serious cause of non-success is ignorance. We don't like to be called dull and stupid, but if something awakens us to the truth, it is a valuable help. If calling names will do it, please submit. I refer now to those people who try and try and never reach anywhere. They look bright and think themselves very able but, after all, don't amount to much. Why, if one can be what he chooses, do they not attain. Because they don't see how and don't know how even after being told again and again. That is ignorance. The cause is in disposition, bringing-up and pre-arranged beliefs. The curse of the music student to-day lies in his belief that he must practice and work a long time before he can get results. It has been told him again and again until he believes it and he won't try to get out of that belief. He may be gotten to do a given thing and he is delighted. But he goes away with the thought, "If I can only keep that," to return later without it. He has not learned the fault that two and two make four every time and at all times. What got him the result at one moment can get him the result every time he tries. If he can't do it, he is ignorant, stupid or lazy. He can take his choice of names. It is his cause of non-attainment and even if he had once seen a mine of musical wealth within him, he would never "get there" so long as he kept forgetting what was taught him and what he did once or twice.

Indefiniteness of idea is a cause of non-attainment. Whatever of worth one has, and every one has it in him to be great, little of it can come to use so long as the mental perception is indefinite. Ask students what their ambition is and most will reply, "To be as good as I can be!" But that is no good. It were better to say, "I'll become capable of holding a $200 choir position," even if there were a faint hope that some day the student would electrify Paris and Berlin as opera singers. Have something positive.

Then, an idea regarding what one can do must have expression and that is what students don't learn. They have hopes and ambitions which are sometimes definite enough, but don't show to friends intention or that on which they base hope of fruition. An idea dies if not nourished and expression is the best nourishment.

Non-attainment in thousands of cases, or in millions, does not prove impossibility of attainment in any case. Nor does it give evidence but that, if proper leading had been secured, every case would be successful. Garcia said of Jenny Lind: "She succeeded because she never tried to do anything until she understood it. Then she did it every time."

MARCHESI'S "TEN SINGING LESSONS."

W. F. GATES.

Madam Marchesi, the celebrated teacher of singing, has written another book. She calls it "Ten Singing Lessons." Anything that this teacher of *prima donnas* writes will be given a respectful reading by all sufficiently interested in singing to read of the art. And that supposes a good deal of interest.

Madam Melba opens the book with "An Appreciation of Madam Marchesi," one of the appreciative sentences of which occupies a page of 155 words, quite Congressional in style. W. J. Henderson follows with an introduction which is really an enjoyable essay on singing, much more to the point than much that follows in the body of the book. But then, Mr. Henderson is an author by profession. Marchesi is not. This latter the reader does not have to be told, however.

The title is a misnomer. The book is divided into ten chapters called "lessons," but anything like a lesson does not put in an appearance until the fifth chapter. These opening chapters are made up of discursive matter written in a conversational style, evidently about anything connected with the Madam herself, or her work, that happened to come into her head. But it makes a book. And it is mostly interesting reading.

In her half century of musical experience in the capitols of Europe, Marchesi has been intimate with the great musical minds of that period, and what she has to say of Mendelssohn, Garcia, Gounod, Liszt, Thomas, Delibes, Brahms, Hiller, Wagner, and others, makes interesting reading.

Marchesi talks enjoyably of her art. She rambles from this to that and back again with the utmost freedom; but scattered here and there are the truths of vocal use that are axioms of the art; and there is warning, advice, anecdote, and finally, in the latter part of the book, four chapters of make-believe lessons. In these she imagines a half-dozen supposable pupils with the customary vocal ills, and, in a decidedly Gallic manner, proceeds to advise and instruct them. *Mirabile dictu!* In these four lessons these wonderful young ladies progress from the first principles of tone production to the point of singing operatic arias of no mean calibre. Certainly a marvellous method! And incidentally (of course) not a bad advertisement for the modest authoress.

The book is pleasant reading. And a vocal student may get many good points from its perusal. The axioms of good vocalism are there, the things one would expect to be taught by any vocal teacher, but, alas, are not. But the title leads one to expect much more in practical educational lines than the book has to offer. Much room is left for reading between the lines.

Although the American girl, if one judges by the programs given and the frequency of her mention, forms, say, one-third of Madam Marchesi's clientele, she has to shoulder many of the faults and is frequently, in fact generally, the object of Madam's humor; at the same time the American girl, in spite of the gibes at her voice, habits, and manners, seems to come to the front in goodly numbers when Madam gives an "audition" of her concert and opera classes.

CHURCH CHOIR WORK.

F. W. WODELL.

Certain writers have, of late, repeatedly set forth the doctrine that none but "professing Christians" should sing in church choirs. One essayist, if memory serves, has gone further and declared that only a "professing" Methodist should sing in the choir of a Methodist church, a Baptist in the choir of a Baptist church, and so on.

There is no legitimate objection to be urged against the policy of a church in seeking for choir singers whose "views" are like unto those for which the particular church is distinguished from other Christian bodies, provided the interests of the musical part of the services be not sacrificed. This is, however, not only a religious but also a practical question. If the churches generally were to decide, to-day, to employ no singers except those who are professing Christians, many excellent choirs would be broken up, and it would be found a matter of great difficulty to replace them. And if the policy were adopted of employing in church choirs only those "professing" Christians whose theological "views" are like unto those held by the employing church, the difficulty in organizing musically satisfactory choirs would, in many cases, be greatly enhanced

So far, speaking generally, no test as to religious belief has been set up for entrance into American church choirs. If the "professor" of religion be not the equal in voice and artistic skill of the non-professor, the latter is usually given the preference. This is not to say that the churches are indifferent to the important matters of personal character and reputation in connection with the membership of their choirs. Where one church ignores these points, ninety-nine take them into account.

As matters now stand, the position of the church music committee is often a difficult one. The church first appoints as members of the committee grocers, builders, insurance men, etc.—keen business men, rather than those having a knowledge of singing and church music. Next it makes a small appropriation for music. Then it coolly asks a committee so constituted and furnished to provide for it satisfactory church music. If to the present duties of the church music committee be added that of examining singers as to their religious and theological "views," we may expect that churches will find it still more difficult to induce members to serve, and committees will experience added troubles in securing singers capable of giving satisfaction to ministers and congregations.

It is not likely that the churches generally will at once adopt the policy suggested by the writers referred to. What may reasonably be expected is that they will lay increasing emphasis upon good personal character; on clean, honest living upon the part of all who serve them—from choir as well as from pulpit. Church singers must at least measure up to the standard of the *gentleman*—a man who is gentle, kind, considerate of the feelings of others. No gentleman will by word or act, wound the sensibilities of those whom he is employed to serve in the public worship. This does away, of course, with lack of respectful attention to all parts of the church service, sermon included. It is a very poor sermon from which no thought of value can be gotten by the choir singer.

The church singer who has a proper conception of his office will banish the thought of self while performing his duties. As an artist he is an interpreter—one who stands between author and auditor. In addition to his responsibilities as an interpreter of the thought and feeling of poet and composer, the church singer is called upon to voice the praise, aspiration, worship of others. If he thinks of self, of his voice, style, musical hopes, ambitions, while singing, his power as an interpreter is weakened, and he is guilty of effrontery in thus endeavoring to thrust his petty personality between the worshipping congregation and the object of their worship.

So in the quartet choir, if an artistic performance—an adequate interpretation—of the music is to be given, there must be a subordination of self upon the part of each member. Without this there can be no proper balance and blending of the voices. If one voice is allowed to predominate, the effect is no longer that of quartet singing, but of solo singing with vocal accompaniment. There is no possibliity of truly artistic work by a quartet choir in which one singer seeks opportunity for the display of "pet notes," facility in execution or other vocal peculiarities. Sometimes it is the soprano whose vocal specialties "must be considered." Quite as often it is the tenor; less frequently the contralto or the bass. The animating spirit is the same in each case, and it is inartistic, amateurish and wholly inappropriate. It is out of place even in a concert quartet, because it is death to artistic excellence. It is still more to be condemned in church choir work, where the object is not, primarily, to give sensuous pleasure by a concert performance, but to create or intensify a proper mood, or to aid the people in their worship.

MRS. GEORG HENSCHEL.

Mrs. Georg Henschel, wife of the composer, singer, and conductor, Georg Henschel, died in London, November 7. Mrs. Henschel (Lillian Bailey) was an American, and was born in Columbus, Ohio. As a singer she has been scarcely less famous than her husband. As early as 1876 she made her first appearance as a pupil of Mme. Rudersdorff. For a few years she sang much in England, meeting with great favor. In 1881 she returned to Boston, and at once took a prominent place among church and concert singers of that city. At that time Mr. Henschel was conductor of the recently organized Boston Symphony Orchestra. Miss Bailey became his pupil, and shortly after they were married. When Mr. Henschel left Boston and returned to London, the gifted couple became great favorites in the musical circles of that city. For many years they made a specialty of joint song recitals, in which field they were inimitable. A feature of these recitals were their duets, in which their close musical sympathy made possible an almost perfect ensemble. Mr. and Mrs. Henschel have made several tours of America giving song recitals, the last having been only a year ago.

CHRISTMAS EVE WITH MENDELSSOHN AND JENNY LIND.

JULIEN.

During the last winter of Mendelssohn's active labors in the concerts of the Gewandhaus, in Leipzig, the apparition of Jenny Lind fell like a ray of light in the chequered world of phenomena.

Even when a child of three, she seemed like a lark in her parents' simple home; as a girl of nine, she attracted the attention of all lovers of music, and entered the Conservatorium of Stockholm, where her charming voice, her fine ear, her marvelous musical memory, her industry, her captivating modesty, made her a favorite of her singing master—Berg. She appeared in children parts, written expressly for her, and the public was enchanted with the silvery tones that streamed from the lips of the little fairy. Probably her continuous study at so tender an age was the cause of her sudden loss of voice, to the horror of her teacher. During four years did Jenny Lind, with astonishing perseverance, pursue her theoretical and technical musical studies in spite of her voice again being almost entirely extinct; and then the full sweet tones came back as suddenly as they had vanished. Her faithful master greeted with delight the melting tones of that sweet voice of which his beloved pupil had been so long deprived, and again he brought her forward in triumph before the astonished public.

She appeared as Agatha in Weber's "Freischütz," amid an unparalleled storm of applause. But there burned within her soul the longing to learn more, so Jenny Lind went to Paris, in order to study with Manual Garcia, the accomplished brother of Malibran and Pauline Viardot, those wondrous stars of vocal art. The fatigue of her journey and homesickness so affected the delicate voice of the young girl, that the celebrated master after having tried her voice, uttered the well-known verdict, *Mon enfant, vous n'avey pas plus de voix!* Take entire rest for three months, exercise your voice with caution—*et puis je serai charmi de vous revoir!*

After three months, Jenny Lind began to study, under the direction of Garcia, shedding tears on her pillow at night, and dreaming of her distant home.

Like the young palm tree, however, under the pressure of the heavy oak, which everyone thought must have crushed it, so did the regal talent continue to shoot upwards to the blue sky; still no word of praise escaped Garcia's lips, he only commended the industry, perseverance and the flexible organ of his pale, quiet pupil, whose voice seemed to him very feeble. Many other brilliant vocalists were at that time blooming in his pasture, before whose glowing tints the delicate lily paled.

It was reserved for a grand and artistic soul to discover her value, and to transport her from darkness to light. Searching artistic eyes found her out, the most exquisite artistic ear felt the ineffable magic of her voice.

To Giacomo Meyerbeer the world is indebted for the gift of Jenny Lind. He heard her one evening sing Alice's Aria in "Robert"—*Va, va, ditelle mon enfant!* And was deeply moved, and the composer of "Robert" felt that it was tones such as those that had floated in his soul when he wrote down that "*Last greeting* from a departing soul."

Jenny Lind now returned for a short time to her northern home in order to prepare herself in entire seclusion for her first appearance in Berlin. In October, 1844, she made her debut in the Royal Opera House as "Norma," exciting a degree of unparalled enthusiasm.

When she appeared in Leipzig, in December, of 1845, the concert public were in a state of feverish excitement; and when at length she came forward on the raised platform, a slender girlish form with luxuriant fair hair; dressed in pink silk, and white and pink camelias on her breast and hair, and so utterly devoid of all pretension, the spell was dissolved and the most joyous acclamation ensued.

Jenny Lind only looked beautiful when she sang. She was pale and had no freshness of complexion; her features were neither regular nor in any way remarkable. Music alone transfigured her countenance in the most enchanting manner.

And it was thus she sang, on that evening in the Gewandhaus, Bellini's Casta Diva, the letter Aria from Mozart's "Don Juan," and Mendelssohn songs: "On the wings of song," and a flower song. And how must Mendelssohn have felt who sat at the piano and accompanied the fair singer, and from whose soul this lovely flower song had sprung. It was on Christmas Eve after one of the concerts, which was given at Gewandhaus, that Mendelssohn made his appearance as a public speaker, as we learn from the diary of an eye witness, to whom we are indebted for this interesting account.

Jenny Lind had received a deputation from the directors of the Gewandhaus concerts in greatful acknowledgment of her services, followed by a torch-light serenade; and the spacious court-yard of the Brockhaus Mansion, where she was stopping, was entirely filled with musicians. Quite perplexed with this ovation Jenny Lind asked Mendelssohn what she ought to do. He advised her to go down and thank them in a few words, if she wished to give real pleasure to the musicians. Very well, she replied, I will go down, but you must speak for me. Mendelssohn immediately offered her his arm and escorted her into the circle of the performers, who greeted the appearance of their two favorites, with a burst of applause. Mendelssohn then spoke as follows: "Gentlemen! You must not think that I am Mendelssohn, for at this moment I am Jenny Lind, and as such I thank you from the bottom of my heart for your delightful surprise. Having now, however, fulfilled my honorable commission, I am again transformed into the Leipziz music director and in that capacity I say, *Long Live Jenny Lind!*"

A thousand-fold echo responded to this call; the charming and ready manner in which he had addressed them excited the most lively enthusiasm and the singers dispersed to the strains of Mendelssohn's "Waldlied." It was a memorable scene.

THE ORGAN.

ORGAN AND CHOIR.

WM. HORATIO CLARKE.

Ideal Organ Services.

All things which man develops into form first exist in the imagination as ideals. The poet meditates on a glimmering vision of thoughts which he duly embodies in metaphorical rhythm. The painter or sculptor long contemplates the possibilities of evolving his ideal into shape and color. The inventor traces out the cause and effect in the machine which he mentally sees in existence. The architect perceives his completed structure in all its homogeneous details before committing his plans to the drawing sheet. The novelist is familiar with his characters and their connection with the story which exists as a reality in his mind before it is printed for others to read, and the composer hears "the music of wonderful melodies" previous to recording them in notes.

The ideal is a present reality to the mind, and as in mental science there is neither time nor space, so the past and future exist in the eternal now of art in the abstract, from which the concrete form is gradually being developed. These introductory lines are preparatory of an outline of

The Temple of Meditation.

This artistic edifice is located in a quiet section of the city apart from the noise and turmoil of business life. Externally, the building has the appearance of a solid and durable structure in the form of a parallelogram about two-hundred feet in length, without lavish expense in adornment, but the interior is a revelation of the purest Gothic architecture, beautifully designed with esthetic art and skill, as if music were thus congealed into a fitting canopy for peaceful thought.

Independent of the organ depth and the vestibule and anterooms, the auditorium is one-hundred and sixty feet in length, eighty feet in width and eighty feet high to the apex of the roof, which is finished in vaulted arches resting on buttressed columns which extend to the floor, there being no galleries. The tinted windows are placed high up beneath the eaves between the columns, and are shaded to induce a twilight mellowness during the services, which is beneficial to introspection and reflection, and there is a sphere of solemnity and reverence produced upon the mind immediately on entering this sanctuary.

The floor is of tiled mosaic, and the seating is arranged on the sides like the separated choir-stalls of the old cathedral, the seats also being at each end, furnishing an insularity in harmony with silent contemplation, the shadowy dimness precl ding the recognition of others who are present.

Each day at eleven, three, and seven o'clock, there is an hour set apart for tacit meditation, when no voice is heard in preaching, prayer or song, nor is there any communication between persons even in whispered utterance, nor is there any platform in front of the organ for public addresses or singing, the base of the case terminating in massive stall seats. During these fixed hours the doors are closed and there is neither entering nor departing, nor the sound of footsteps. The only rule for admission is that there shall be no conversation nor moving about, nor any disquietude which will interfere with restful thought, so that good impressions may flow into the mind in this temple of meditation while passively listening to

The Organ Music

which is not previously announced. There are no printed programs, neither is the organist or his deputy seen, nor is there any device to attract the attention to the player, nor is the name of the composer previously published or made known, the music being left to exert its influence upon the mind in its universal language as an elevating art independent of its connection with either composer or executant.

The music continues without cessation during the hour, giving courage, hope and consolation in imparting spiritual aspirations for all that is good and true, as the organ sends forth its breath of holy benediction.

In addition to the artistic improvisations of the organist, the most thoughtful, sympathetic and stately compositions of all the best organists of the past and present are interwoven, from the simple communion up to the dignified polyphonic fugue.

The music is held strictly to legitimate organ compositions, written in a serious and thoughtful style, and no ephemeral irregularities, nor transcriptions of operatic overtures and trivial marches are ever introduced to disturb the meditative sphere. Neither is music of a sensational nature, nor anything suggestive of a concert performance ever heard in these services of thoughtful worship, in which the individual spirit communes with its inner degree, and recognizes the Omnipresent Infinite Life of all things, the organ music performing its highest use apart from the conventional religious teachings of sectarian organizations.

●

The Organist

is one peculiarly fitted for his sacred position in scholastic attainments, artistic ability and character, who venerates his music and instrument as divinely given to act as an elevating mediator, and whose heart is in the deepest sympathy with this meditative idea.

He is a man of disciplined experience, who through many years of labor and conflict has so learned to subdue his natural love of adulation that he cares not to have his name on programs, or even to be thought of during the hour of meditation. At that time his personality is merged into the idea of he'ping listeners whom he never meets, through his holy profession, and he does not seek to attract any attention to his acknowledged ability, being always subservient to the meditative ideal, so much so that it would not be far from the truth to conjecture that this movement is the result of his inception.

His social and moral standing as a man of integrity, whose word is inviolable, whose motives are never mercenary, who never disappoints any expectatives financially or musically, wins the respect of all, and his influence in private life is so kind and helpful to everyone, that in listening to his music, the knowledge that it is communicated through a pure and refined nature adds to its impressiveness, although he does not come into personal contact with those who gather to receive his heavenly blessing, nor is he ever aware of who is present at the hour of meditation.

His position, with its three daily services and two organ recitals a week, is not that of a sinecure, but his income is adequate for all his requirements, and he holds the office permanently, and will continue to do so as long as his talents respond to the demands.

There is also a deputy organist of his own choosing who is in intimate sympathy with him in the meditative movement, possessing kindred ability and tastes. He assists in the services during his senior's absence, and also co-operates with him at a duplicate console. He also has an ample salary. Both organist and deputy possess such experience in organ mechanism, that they take full charge of keeping the organ in constant order. They are both composers and prepare the music for the two key desks of four manuals and pedals each, placed side by side, which greatly increases the effectiveness of the organ in compositions expressly written for this arrangement.

In order that high standards of pure organ music may be presented as models for organists to follow, regular organ recitals are given each Saturday and Sunday afternoon at five o'clock, independent of the meditation services, no demonstrations of applause or recognition being permitted in the edifice.

●

The Organ

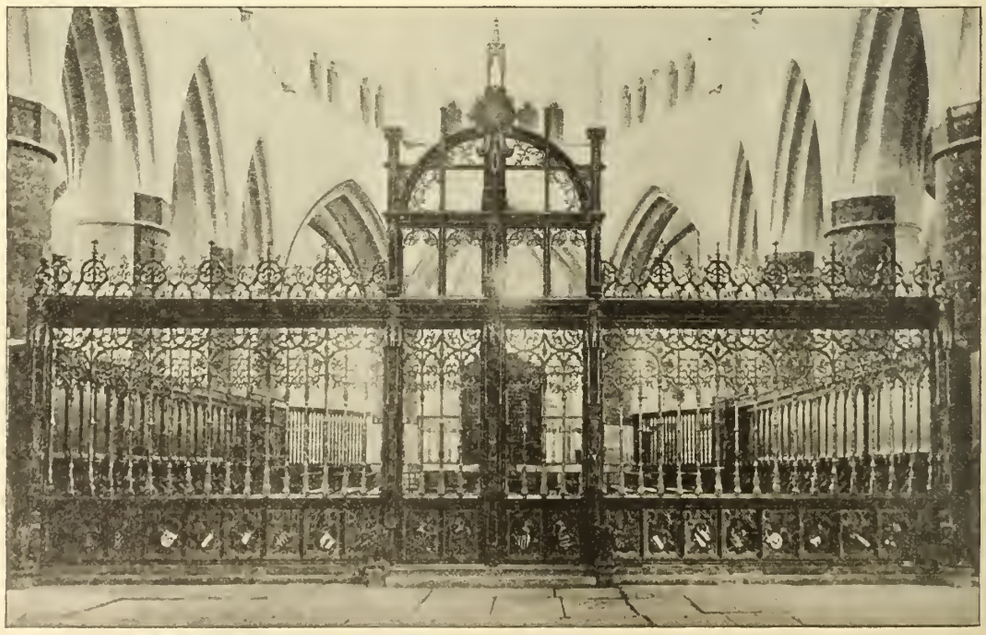
is enshrined in a majestic case of Gothic design, occupying the full width of the edifice, with its central spires running upward the full height, the 32 ft. displayed pipes, as well as the others being grouped in architectural symmetry, interchanged with open tracery work.

The organists are hidden from view, the two consoles being located at the opposite end in a screened Gothic balcony which is entered from the organ studio over the vestibule.

In addition to the general impressiveness of the auditorium, the noble housing of the organ creates an inspiring effect in the mind of the beholder, as its outlines are dimly seen framing the polished pipes as they obscurely glisten with the reflection of the mellow light from the stained windows.

The organ is a standard masterpiece of material and workmanship, where no expense has been spared to produce as perfect a specimen of an instrument adapted for its special purpose as has ever been constructed, no restriction having been placed upon the desires of the organist who had full supervision of its structure, and the instrument does not contain harsh or discordant stops, so that no inharmonious combination can be made.

The auditorium was designed to give perfect expression to the organ as the noblest instrument fashioned by man, in its varied capacity to incite elevating thoughts during the appointed hours of meditation. The dimensions are proportioned to give resonance to the organ tones, and although the room is spacious, it is not intended to seat great audiences, as the number who appreciate these services are limited, and the silent worshippers are so isolated from each other as to afford the retirement and seclusion which meditation



FRONT VIEW OF THE HAARLEM ORGAN.

requires, and there is no social element connected therewith. There is no organization for membership nor fee of admission, neither are contributions received, but all persons have the privilege of entrance who will abide by the rules of silence which the intuitive laws of courtesy inculcate, and those who attend are admitted by tickets procured in advance, the issue being restricted to the limited number of the side and end stall seats, which are arranged in two rows, the rear row being elevated above the other.

The building and organ were both donated to the city by a wealthy philanthropist, who has also bequeathed a permanent endowment fund, the interest of which maintains all of its sustainment, salaries of organists, superintendent and his assistants, and other general expenses.

The mayor appoints annually three trustees, who see that the conditions of the bequest are fulfilled. The building, organ and endowment are to be held in trust as long as the edifice shall be kept sacred to the worship of silent meditation as incorporated by the donor, and this is the first step in the development of the ideal organ service.

•

"He who with bold and skilful hand, sweeps o'er
The organ keys of some cathedral pile,
Flooding with music, vault, and nave, and aisle,
Though on his ear falls but a thunderous roar—
In the composer's lofty motive free—
Knows well that all the temple vast and dim,
Thrills to i's base with anthem, psalm, and hymn,
Tuned to the changeless laws of harmony.
So he who on the varied chords of life,
With firm, sweet touch, plays the Great Master's score
Of truth, and love, and duty evermore,
Knows, too, that far beyond the roar and strife
Of Earth's discordant din, in the true time
These notes must all accord in symphonies sublime."

•

A Large Organ.

A large organ of four manuals of 61 notes compass and a pedal section of 32 keys is being built for the new Woolsey Memorial Hall at Yale University, New Haven, by the Hutchings-Votey Organ Co., of Boston. It is a gift of the Newberry family of Detroit The case is to be eighty-four feet wide, forty feet high, with an average depth of thirteen feet, and the action is to be tubular-pneumatic throughout. The sixty four ft. "Gravissima" of the Pedal Section, is not a separate set of pipes, but a mechanical combination from the thirty-two ft. Contra Bourdon, which produces a resultant vibration corresponding to the sixty-four ft. waves. The organ is to be finished by Oct. 1, 1902.

I.—Great Section.

8 ft. Principal Flute.
8 ft. Gamba.
8 ft. Gemshorn.
8 ft. Viol d'Amour.
4 ft. Octave.
4 ft. Concert Flute.
4 ft. Gambette.
4 ft. Clarion.
2⅔ ft. Twelfth.
2 ft. Fifteenth.
Vrks. Mixture.

II.—Swell Section.

16 ft. Contra Gamba.
16 ft. Lieblich Gedackt.
16 ft. Posaune.
8 ft. Open Diapason.
8 ft. Horn Diapason.
8 ft. Viol d'Orchestre.
8 ft. Stopped Diapason.
8 ft. Flauto Traverso.
8 ft. Salicional
8 ft. Quintadena.
8 ft. Æoline.
8 ft. Viol Celestis.
8 ft. Cornopean.
8 ft. Oboe.
8 ft. Vox Humana.
4 ft. Principal.
4 ft. Flute Harmonique.
4 ft. Violina.
2 ft. Flautino.
Vrks. Dolce Cornet.
Tremolo.

III.—Choir Section (Enclosed in a Swell-Box.)

16 ft. Contra Dulciana.
16 ft. Contra Fagotto.
8 ft. Open Diapason.
8 ft. Gamba.
8 ft. Melodia.
8 ft. Lieblich Gedackt.
8 ft. Unda Maris.
8 ft. Dulciana.
8 ft. Clarinet.
4 ft. Viola.
4 ft. Flauto Traverso.
2 ft. Piccolo Harmonique.
Tremolo.

IV.—Solo Section.

8 ft. Tibia Plena.
8 ft. Tuba Sonora.
8 ft. Rohr Flute.
8 ft. Dolce.
8 ft. Orchestral Oboe.
4 ft. Hohlpfeife.

Pedal Section. (Augmented.)

64 ft. Gravissima.
32 ft. Open Diapason.
32 ft. Contra Bourdon.
32 ft. Contra Bass.
16 ft. Open Diapason.
16 ft. Open Diapason.
16 ft. Violono.
16 ft. Bourdon.
16 ft Dulciana.
16 ft. Lieblish Gedackt.
16 ft. Bombarde.
16 ft. Contra Fagotto.
8 ft. Gross Flute.
8 ft. Octave.
8 ft. Violoncello
8 ft. Gedackt.
8 ft. Tromba.
4 ft. Super Octave
4 ft. Flute.

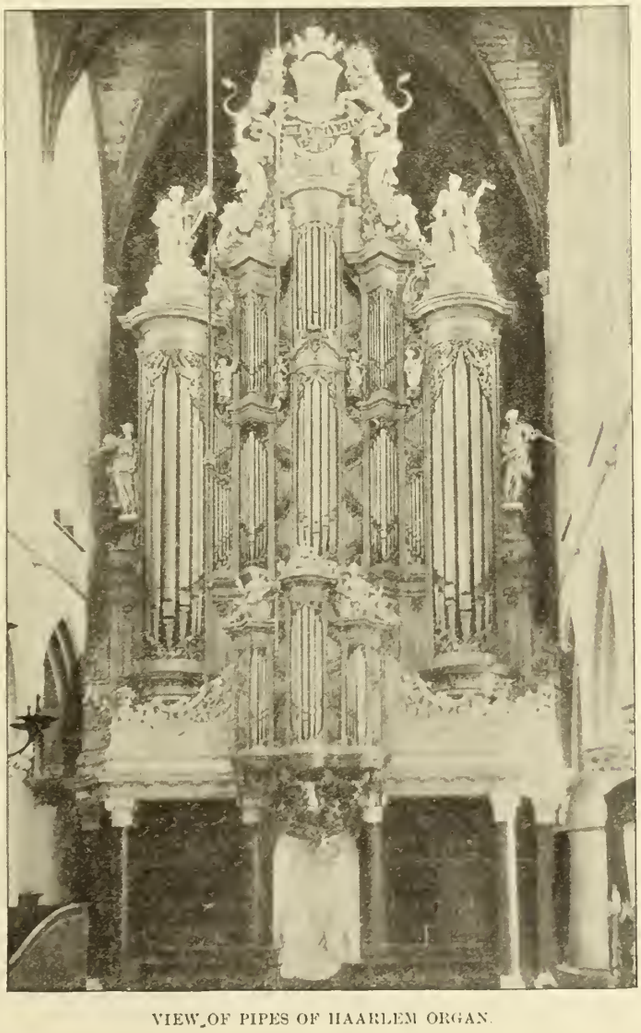
Angmented Pedal Section.

The word "augmented" is used in modern specifications to indicate an increase of musical capacity by means of a mechanical device. When applied to the Pedal Section it is to be highly commended as a legitimate method of increasing the efficiency of that portion of the organ which is the underlying support of the instrument, and which on account of its greater expense has been too much restricted.

For the benefit of church committees who are not organists, or fully informed concerning details of construction, a desire has been expressed from correspondents that there shall be a clear explanation of this improvement.



VIEW OF PIPES OF HAARLEM ORGAN.

In past years, two and three manual organs have generally been limited to three pedal stops:—16 ft. Open Diapason, 16 ft. Bourdon, and an 8 ft. Violoncello. Forty years ago, some builders also included a loud 16 ft. Trombone, which of late years has been discarded, excepting in organs of large size, because its loud tones did not blend well with the combinations, and its expense was greater than its usefulness.

The first attempt to increase the power of the Pedal Section was by means of a Pedal Octave Coupler, by which the notes of the lowest fifteen or eighteen pipes could be doubled in the 27 or 30 notes of the pedal keys. This mechanical stop has not been satisfactory, excepting in the full organ, when its effect was equivalent to "Pedal Doppio," or playing the pedals doubled with the feet an octave apart.

This old device has now been superceded by a very simple coupling movement which doubles the efficiency of the Pedal Section in this manner: When there are 30 pedal keys, each pedal stop has 12 more pipes added to the upper compass, giving 42 pipes to each stop. Thus, where there is a 16 ft. Open Diapason, it has its own compass of 30 pipes answering to each pedal key. Now if an 8 ft. Pedal Octave, or Flute, as it is sometimes called, is desired, independent of the 16 ft. Open Diapason, on pressing the lowest pedal key, the tone CC will sound, and the corresponding pipes belonging to an 8 ft. stop, the full compass of the pedal clavier. In this case the 16 ft. tone is shut off by closing the stop, and if both the 16 and 8 ft. tone are desired together, it is only necessary to draw both the 16 ft. Open Diapason and 8 ft. Octave, and the coupling mechanism is brought into use in simply drawing the 8 ft. Octave.

There is no deception in this arrangement, because an honest builder, in his specification, indicates his intention by inserting the word "augmented." As chords are not played from the pedal keyboard, the use of this device cannot be discovered in the musical effect, and it obviates any need of double pedalling in difficult passages. The only way it may be perceived would be by playing the pedals in octaves, with the 8 ft. Octave drawn—in the upper octave of the keyboard, but as the doubling of each note of the Pedal Section is already legitimately provided for by the addition of 12 upper pipes, there is no demand existing in organ music which is not fulfilled by this augmentation.

With the 16 ft. Bourdon, it also provides an independent or combined 8 ft. St. Diapason from the 42 Bourdon pipes, but its greatest use is in providing for a 32 ft. Sub Bourdon, at the least expense. This stop should be in every organ in which more than $3 500 is to be invested. By simply extending the 16 ft. Bourdon downward 12 pipes instead of upward, a complete 32 ft. Sub Bourdon of 30 pipes may be obtained, in addition to, and independent of, the 16 ft. Bourdon, and by having on the same chest 12 more upper pipes, making in all 54 pipes, where electric or tubular action is used, the three stops, the 32 ft. Sub Bourdon, 16 ft. Bourdon and 8 ft. St. Diapason may be played from these 54 pipes singly or in combination. With a 16 ft. Gamba in the Pedal Section, which, with a draught or dowel beard is much more useful in organs of ordinary capacity than a 16 ft. Trombone, a strong 8 ft. Violoncello may be obtained by this augmentation, which may also be used as such singly or united. Where there is an 8 ft. Violoncello without the 16 ft. Gamba, a 4 ft. Viola may be obtained by this method. But as a rule 4 ft. pedal stops, excepting in large organs, are not essential, because the effectiveness of the pedal organ in its individuality, apart from its coupling with the manuals, rests in the 32, 16, and 8 ft. tones, the pipes being of larger scale and having a greater pervading quality than the manual stops.

As a summary, church committees need not hesitate in accepting a specification where "augmented" is specified, because there is no prevarication implied; but they should fully understand what "grooved" or "channeled" basses mean when affixed to the name of a manual stop in a specification, as such a word means that the legitimate bass is omitted, and that the bass of one stop is made to answer for two, an item constantly found in low priced organs where the apparent capacity is measured by the number of stop-knobs. If this is understood and accepted by a purchasing committee beforehand, there is no "grooved" dishonesty on the part of the builder.

•

Slotted Pipes and Horizontal Swell Ladder.

W. H. P.—"I wish you to know how much I have enjoyed your articles on the Organ, now running in THE MUSICIAN. I have "Clarke's Outline of Organ Structure," which was sent to me eighteen years ago, when I lived at Mendota, Ill. I also have "Hopkins and Rimbault," and "Robertson's New Treatise," in addition to a number of smaller works, and have read them all many times and always with pleasure and profit.

"You have stated some things that were new to me, and in other instances told things that were old, yet in such clear language, that I understand them better

than ever. I have worked around organs more or less since my boyhood, my first experience being with the late Ira Bassett, in Chicago, before the fire of 1872. I have also done some setting up of new instruments, moving, repairing, etc., although organ work is not my regular business, being a teacher of music, having studied with the late Eugene Thayer in '76 and '77.

"I most heartily agree with you in regard to 'Mixtures,' but love a *good* reed stop. I know they are a bother, but I am willing to take all the trouble necessary to keep them in order. I want plenty of 8 ft. stops, with just enough above and below to balance the tone when power is wanted.

"F. E. Robertson, in his excellent Treatise, condemns the practice of slotting string-toned stops, see page 113, paragraph 191, where he says 'Slotting imparts a peculiar hard or horny quality of tone, and should never be employed unless that quality is deliberately wished for.'

"I should like your opinion of that matter, and hope you will consider it worth mentioning in THE MUSICIAN.

"In my organ it is quite difficult to get at the reeds and, still worse, to get at the rest of the swell pipes. I have remedied this trouble by placing hinges on one of the top panels of the swell box, so that I can open it by merely turning a button, and have put in an iron ladder (instead of a walking-board), which is suspended from the top of the box, as shown in the enclosed sketch, and can now reach any pipe with ease. I think many organists have the same trouble and this suggestion may help them."

Answer.—Thank you for your encouraging words, which are always gratefully appreciated. In regard to slotting string-toned pipes, much depends upon the width of the slot, its distance from the top of the pipe and the length of the opening. A long, narrow slot gives a somewhat nasal quality to the tone, and such pipes draw into tune with stronger toned pipes. It is true that there should be an object to be attained in the slotting of pipes, which has relation to the timbre, independent of the tuning, which the voicer must know in determining the scale of the slot. Some builders are so particular with the quality of the open Diapason, that they will not allow any slotting or cutting into the top of the pipe, preserving a smooth edge, slightly turned in, as in flatting a pipe. A pipe thus coned in will stand in tune and hold its own pitch better than one which is flared out as in sharping. For this reason the temperament pipes in the "Octave" or 4 ft. Principal are never slotted, but are tuned with cones.

Your plan of a suspended iron ladder in the Swell Box is an excellent one. The open ladder can follow the curve of the pipe tops, as low down as is required, without shading them.

All organists who have introduced practical helps, by force of circumstances, are invited to communicate with this department and express themselves freely.

●

Service Prelude No. 8.

This andante movement illustrates a phase of musical thought independent of registration, in which Disquietude and Rest are pictures. In the first eighteen measures the bass is in constant motion, first with its figure in A, then modulating in the same form to G and F until it rests in a prolonged pedal point first on the dominant of A, and then the dominant of F. This bass theme was the first which occurred to the mind of the composer, to which a counter theme was adjoined.

When the bass arrives at its pedal point, its theme is introduced in the treble with syncopated passages, first in A and then in F, until suggestions of the original theme again enter in the bass, and the prelude closes with imitations of this theme in augmentation.

In playing this prelude, the groups of eighth notes should be separated when not tied together; no ties being introduced save where they are intended.

There are a number of methods of interpreting this prelude with varied registration. All the notes may be reached by the hands independent of pedals, but when the pedals are used, the treble and alto may be played upon one manual and the tenor upon another with varied and contrasting soft stops. The only place where a consistent change can be made is at the rest at the end of the thirty-fourth measure, when the finale, beginning with the thirty-fifth measure should be taken upon the softest swell stops.

[CORRECTION. In the Service Prelude No. 7, "Devotion," in the November MUSICIAN, the typographical error on the first note of the treble and alto in the eleventh measure should be changed to F♯ in the treble, and D♯ in the alto, two degrees lower than printed, an inadvertency which every musician would immediately recognize as unintended.]

●

Accompanying Congregational Singing.

Although choral tunes belong to the simplest order of sacred music, it is more difficult to lead and bind together a mass of uncultivated voices with the organ than is apparent. As it is the perfection of true art to conceal art, so the accompanist in this line of service must be able to perform his work in leadership without the least appearance of his efforts.

To a cultivated organist it is not a pleasant task to accompany congregational singing, compared with the scope of registration and expression which choir singing permits. He must forego all solo work and play the simple chords of the tunes, using combinations which give the dynamics, represented by *ff*, *f*, *mf*, *mp*, *p*, *pp*, according to the sentiment of the words and number of voices, which degrees of power must be left to his judgment. With the ordinary two-manual organ having a 16 ft. Open Diapason and 16 ft. Bourdon in the Pedal Section, these dynamic indications might thus be represented.

ff. Full organ with all the couplers, and Swell opened.

f. Full organ with reeds and mixtures off and Swell closed.

mf. Gt. manual with 8 ft. and 4 ft. stops with Swell closed.

mp. Gt. 8 ft. Melodia, Dulciana with Swell closed.

p. Full Swell closed

pp. Swell 8 ft. flue stops and 4 ft. Harmonic Flute with Swell closed, and 16 ft. Pedal Bourdon.

In all the combinations excepting *pp*, the 16 ft. Pedal Open Diapason is to be used.

To attempt to accompany the voices of a congregation distributed throughout the audience room, with a softer combination than indicated would not be practical, as the organ would not be heard, and people would cease to sing.

Unless all voices sing the melody, it is not right to vary the harmony from the printed notes, as it would give offence to any who are singing other parts, but an organist is at liberty to vary the harmony when a choir is singing a hymn or chant in unison.

It is an ancient custom to "give out" or play the entire tune through before singing, but it is only essential to play the first line which gives the indication of the melody and the tempo, and after a complete cadence has been made, following a distinct rest, a signal note of the melody a beat or two in advance, according to the accent, will direct the voices to begin with the organ chords, without delay or hesitation. Some organists play a pedal note in advance, but this is not so definite as the melody note which most of the voices take up.

Each note of the melody should be played distinctly, and not held when there are two notes on the same degree. The pedal part should not be held at the end of the line, nor any of the chords, and there should be a separation of the chords between the last note of a line and the first of the next without loss of time. Sometimes there are natural pauses at the end of lines which are conventional, which the organist favors in his playing. Different congregations vary these natural pauses according to traditional custom, and an organist will not succeed who makes an innovation on these methods.

I knew a prominent organist to lose a good position because he would not yield to these points in congregational singing. He was so inflexible in his musical strictness that he insisted on playing the tunes just as written, independent of the congregation, to such an extent that he was courteously told that his services were not needed, and he was succeeded by a player who had the faculty of adaptation.

Many excellent congregational tunes are printed in notes of too high a tonic, and the organist must be able to readily transpose these into a lower key. Sustained melody notes shonld not range higher than D, although E flat may be reached now and then without effort. It is very exhausting and depressing for a mass of voices to sing through four verses of a choral pitched too high.

In regard to interludes, where a short one is played between the verses, and especially after two verses, it is restful to the singers. Where an organist has an educated gift in improvisation, and can make an appropriate connection between the verses in keeping with the style of the music and sentiment of the hymn, such interludes are very acceptable, if not too long, concerning which a player must constantly be on his guard not to exhibit himself while the congregation await his cadences. Where an organist has not the gift, the last line of the hymn may be played on another manual, at the end of every two verses with good effect.

At the end of each verse the last note may be held just beyond the length of the verses, the chord never ending abruptly, but the sustained notes ceasing after the manner of a descending arpeggio, transferring the hands in an artistic maaner to the softer manual, with the pedal note sounding last. In addition to this manner of ending, at the last verse, there should be a diminuendo of the stops to the softest, and ending with the 16 ft. Pedal Bourdon, but at the beginning, after the signal note, there should be a decisive chord without arpeggio.

GRADED CHOIR MUSIC.

Grade I.

Hymn Anthem—"God of Evening, and of Morning." A. Mine. Key of C. 4-4 moderato. 2½ minutes. 2 pp., 8c. Soprano to F♯. Begins with voices in unison leading to a soprano solo in A, ending with a responsive chorus effect.

Hymn Anthem—"Not a Sparrow Falleth, But It's God Doth Know." Carl Bruche. Key of G. 4-4 andante con moto. 2 minutes. 3 pp., 8c. Soprano to E. Solo for soprano or tenor followed by quartet or chorus.

Hymn Anthem—"Abide With Me." Felix Holt. Key of B♭. 2-4 andante. 2 minutes. 3 pp., 8c. Soprano to F. Duet for soprano and tenor; trio for soprano, alto and tenor, followed by bass solo and quartet or chorus.

Hymn for Vesper Service—"Lo! 'Tis Night! and Earth is Hushed in Silence." Beethoven. Key of B♭. 2-4 andante. 2½ minutes. 3 pp., 8c. Duet for soprano and tenor, followed by quartet or chorus.

Hymn Anthem—"Sweet the Moments, Rich in Blessing." Felix Holt. Key of E♭. 2-2 andante sostenuto. 1½ minutes. 2 pp. Soprano to F. For quartet or chorus, with duet for alto and tenor.

Vesper Service Hymn—"Saviour, Breathe an Evening Blessing." W. F. Sudds. Key of G minor. 4-4 andante. 2½ minutes. 4 pp., 8c. Soprano to F. Solo for mezzo soprano or alto; duet for soprano and tenor, and quartet and chorus.

Hymn Anthem—"O Draw Me Nearer Thee, O God." G. W. Haskell. Key of E. 4-4 moderato. 2 minutes. 3 pp., 10c. Soprano to E. Soprano solo followed by quartet or chorus.

Hymn Anthem—"Come, Holy Spirit, Heavenly Dove." W. F. Sudds. Key of B♭. 3-4 andante. 3 minutes. 3 pp., 8c. Soprano to F. For quartet or chorus, with soprano solo.

National Hymn Anthem—"Our Land, O Lord, with Songs of Praise." P. A. Schnecker. Key of B♭. 4-4 allegro. 3 minutes. 6 pp., 12c. Soprano to G. Chorus with soprano and bass solos.

Grade II.

Anthem—"The Lord is My Light." A. J. Davis. Key of F. 3 4 allegro moderato. 2 minutes. 3 pp., 8c. Soprano to A. Chorus or quartet with soprano or tenor solo.

Anthem—"O Be Joyful! Sing and Rejoice." Haydn. Key of A. 4-4 allegro. 2 minutes. 6 pp., 10c. Soprano to G. For chorus throughout with short phrase for soli. Transposed from the "Credo" of the First Mass.

Anthem—"Raise Your Heads, O Ye Gates." A. J. Davis. Key of C. 4-4 maestro. 4 minute. 8 pp., 8c. Soprano to G. Full chorus without solos.

Anthem—"How Beautiful Upon the Mountains." W. F. Sudds. Key of D. 3-4 animato. 2½ minutes. 5 pp., 8c. Soprano to G. For chorus throughout, without solos.

Hymn Anthem—"Lord, Remember Me." G. Lange. Key of D♭. 6-8 andante. 3½ minutes. 4 pp., 8c. Soprano to F. Soprano solo and quartet or chorus. Theme from a popular pianoforte composition.

Anthem—"Like as a Father Pitieth His Own Children" W. F. Sudds. Key of B♭. 4-4 andante. 2½ minutes. 5 pp., 8c. Soprano to F. For quartet or chorus, with alto and soprano solos.

[THIS LIST WILL BE CONTINUED IN THE JANUARY ISSUE.]

IN THE MUSICAL WORLD.

AMONG OUR SCHOOLS AND TEACHERS.

Miss S. C Very has concluded a successful course of lectures at Freehold, N. J. They were given under the auspices of the Caecelian Club.

An interesting program was given at Pomona College School of Music, Claremont, Cal., October 21. Mr. William Irving Andruss is the director.

Pupils of Walter S. Sprangle gave their twenty-fifth recital, October 30 (place uot named). Evidently the pupils are interested in their work.

Wellesley (Mass.) College has a course of musical lectures and concerts during the season, at which the best lecturers and artists appear. The present season was opened on Monday evening, November 18, by Carl Ambruster, the English lecturer. His subject was "Modern Composers of Classical Song." Illustrations from Liszt, Franz, Brahms, Rubinstein, Grieg and Jensen were sung by Miss Pauliue Cramer. On December 2, Mr. Sherwood gives a piano recital.

Mr. Perley Dunn Aldrich gave the following program at a recent recital at the Granger Place School. Jockey to the Fair, Richard of Taunton Dean, The Lass of Richmond Hill, O Mother Mine, (Old English). Peace, (Norris). Nina, (Pergoles). Auf Fluegel des Gesanges, (Mendelssohn). Eliland—A Song Cycle; (Silent Woe, Frauenwoerth, Roses, Secret Greetings, On the Shore, Children's Voices, Moonlight, Dreams, Anathema, Resignation), (Von Fielitz).

Professor Fenelon B. Rice, director of the Oberlin Conservatory of Music, died late in October. Very impressive fuueral services were held on October 29, when the universal esteem in which he was held, both as a man and a musician, was voiced by John H. Barrows, president of Oberlin College, Rev. Dr. H. M Fenny, Dr. L. C. Warner and Prof. H. C. King. To his great exeeutive abilities Oberlin Conservatory owes its success, and his pure manhood exerted an influence of ever widening rauge.

At the Ohio Wesleyan School of Music, Delaware, Ohio, J. Warren Andrews played the following program at an organ recital November 5: Toccata and Fugue in F, Book 3, No. 2, J. S. Bach; Gavotte. in F, Martini; Vesper Bells, W. Spinney; Suite Gothique, Op. 25 (Introduction Choral, Menuet Gothique, Priere a Notre Dame, Tocatta), L. Boellmanu; Marche Funebre et Chant Seraphique, A. Guilmant; Largo, Händel; Reverie of Home, Andrews; Pas orale, from Sonata in D minor, A. Guilmant; Gavotte (Mignon), Thoma; Tocatta, Fifth Symbony, Widor.

At a recital given Wednesday evening, October 30, in the Concert Hall of the Broad Street Conservatory, 1329-31 South Broad Street, Philadelphia, by some of the professors of the Conservatory, Mr R. E. S. Olmsted, the well-known New York baritone who has just been added to the Faculty, was heard In selections by von Fielitz, MacDowell and Foote. Mr. Olmsted has a beautiful voice which he uses with skill. His enunciation and phrasing were particularly good. Mr. Stanley Addicks, the pianist, played a group of Chopin numbers and some compositions by Haberbier, Schuett, Moszkowski and himself. He also played the Schumann Souata in D minor with Mr. Witzemann. Mr. John K. Witzemann, the violinist, played the Vieuxtemps Concerto, the Russian Airs by Wieniawski and the Hungarian Airs by Ernst. His playing was distinguished by its emotional warmth, accuracy of iutonation and breadth of tone.

The following items indicate the musical activity at Ann Arbor, Michigan: The choral union, a chorus of mixed voices, numbering about three hundred members, has commenced rehearsals on Gounod's opera, "Faust," which will be given at the May festival here next year. The chorus will also give Gluck's "Orpheus" and either Wagner's "Flying Dutchman" or "Tannhauser." The choral union is composed chiefly of university students and school of music pupils, and has been for many years under the able direction of Prof. Albert A. Stanley, Professor of Music in the Michigan University, and also Director of the University School of Music. Miss Minnie M. Davis is accompanist for the chorus. Theodore Thomas' Orchestra gave the opening concert Monday evening, November 4, in the series given under the auspices of the choral union. The Treble Clef Club, a chorus composed of about sixteen ladies' voices, under the direction of Mr. Griffith Gorden, has resumed rehearsals. The club is preparing to give a fine program next Spring. Miss Marian Smith acts as accompanist.

A school of Church Music has been established in connection with the Chicago University. It is intended to benefit both ministers and church musicians. Carpenter Chapel has been rebuilt to meet the requirements of the school and the following course of study is outlined: *Outline of Course of Study.*—1. Hymnology and Liturgics, or the Conduct of Public Worship. In this course all the parts of the service employing music will be studied theoretically and practically. Attention will be given to Voluntaries, Hymns, Anthems, Chants, Responses, etc., and to the adaptation of all the varied kinds of worship-music to the other parts of the service. 2. Analysis of hymn tunes and easy anthems, with study of the elements of musical expression. This course is given in the Seminary, and will be open to music students desiring this more elementary and fundamental work. 3. Choir practice. Study of selections to be rendered in Chapel Service, and conducted as normal work with reference to use in Churches. 4. History of Church Music A course of lectures illustrated by typical compositions representing different periods. 5 Ear-training. Giving familiarity with pitch, melody, rhythm, chords and modulations, and also with various qualities and registrations of the organ. 6. Private lessons in theory of music, organ and piano with special reference to church playing and choir accompanying. *Faculty*—President, Rev. J. H. George, D. D Rev. W. B. Chamberlain, D D., Dean and Professor of Hymnology and the Offices of Worship. Walter Spry, Lecturer on the History of Church Music, Composition and Criticism and Instructor in Organ, Pianoforte and Accompanying Playing. Miss Emeline Phelps Farrar, Chapel Organist and Teacher of Organ. H. Augustine Smith, Teacher of Singing. Miss Mana Dana, Assistant Teacher and Illustrator (Piano). *Lecturers*—Prof P C. Lutkin, Director of Music Department North Western University, Lecturer on Modern Church Compositions. Mr. Felix Borowski, Chicago Musical College. Interpreter of Chicago Orchestra Concerts. Rev. W. A. Bartlett, D. D., Pastor of First Congregational Church, Chicago. Lecturer on Music in the Practical Work of the Church. Rev Wm. E. Barton, D. D., Pastor of First Congregational Church, Oak Park. Lecturer on Preparation of Special Church Services. Rev. Frank W. Gunsaulus, D. D., President Armour Institute. Lecturer on Music and Poetry as Inspiration for Preaching Mr Norman S Patton, Architect. Lecturer on Church Architecture in its relation to Music and Worship Dr. Louis Falk gave a fine organ recital on November 14, in connection with the school.

Mrs. H. J. Hull gave a recital at Kearney, Neb., which included a somewhat novel feature. Each number on the program was accompanied by a verse, which gave a clew to its meaning. The recital was well attended, the audience paying a small admission fee.

Purils of Mr. Clarence Hamilton, of Providence, R. I., gave the following program at a recent musicale. Miss Zoie M. B. Morse, soprano; Albert T Foster, 'cellist were the assisting artists: Trio, Op. 55, Allegro con fuoco, Romanze, Minuetto, Allegretto, Hofmann; "The Fauns," Chaminade; "The Maiden and the Bird," (with violin obligato), Spohr; Nocturne, Op. 32, No. 1, Chopin; Etude in B flat, Foote; Humereske, Kiel; Sonate in A, Searlatti; "When the Swallows Homeward Fly," Maud V. White; Polonaise, Tschaikowsky; Serenade and Scherzo from Trio, Op. 3, Hamiltou.

The second course of the Hanchett lecture recitals given in the Assembly Hall of Adelphi College, Brooklyn, is attracting as much interest as the first course of the autumn. "Musical Contrasts" will be the subject throughout the season, with sub-topics for each individual lecture recital. The sub topics for the present course are: November 11, "The Vitality of the Older and Newer Music;" November 18, "'Faust' Music;" November 25, "The Sonority of the Older and Newer Music;" December 2, "The Tone Colors of Classic and Modern Composers." Dr. Henry G. Hanchett gave the lecture on November 11, and in the illustrations he was assisted by Miss Laura Phelps, violinist, he himself giving the piano numbers. Dr. John Cornelius Griggs, who is the instructor of musical history at Adelphi College, gave the second lecture last Monday afternoon. Dr. Hanchett will deliver the third next Monday afternoon, and also the fourth, which, however, will be given in the evening. At the closing lecture Dr. Hanchett will have the assistance of Maxwell Hood's orchestra, Miss Carolyn At Lee, soprano, and Mr. Andrews, baritone. Mr. Hanchett's articles on the Study of a Sonata, which have just appeared in THE MUSICIAN, will be remembered by our readers.

AT HOME.

Leonora Jackson, the violinist, is making a very successful tour.

Miss Mary Hallock, a Philadelphia pianist gave a very successful recital in New York in November. Her Schumann playing was very much praised.

Jean Gerardy, the young 'cellist, has won a triumph with the Boston Symphony Orchestra. His playing is marked by beautiful tone and thorough musicianship.

Miss Abbott, who is said to be a protege of Jean de Reszke's, and who has been trained here under Mme. Ashforth, has been engaged at the Grand Opera in Paris.

At a recent Kneisel Quartet concert in New York, a new sonata for violiu and piano, by Henry Holden Huss, was played. The work, which is still in manuscript, is highly praised.

Among the artists who will visit America this season is Harold Bauer, the pianist. He represents the best there is in pianistic art. His coming is anticipated by musicians with the greatest pleasure.

Eugene Schmitz, the recently elected mayor of San Francisco, was leader of a theatre orchestra in that city. He was the candidate on the labor union ticket. Who can say that honors are not in store for musicians?

William J. Henderson is delivering a course of lectures on History of Music before the students of the New York College of Music. The first was on the afternoon of Monday, November 18, and they will continue on each Monday during the season.

The complete list of symphonies for the season to be played by the New Haven Symphony Orchestra are: November 14, Schubert's Unfinished Symphony in B minor; December 12, Mozart's Symphony in G minor; January 16, 1902, Beethoven's Third Symphony, kuown as "The Heroica;" February 20, Beethoven's Eighth in F major; March 13, Tschaikowsky's Symphony in E minor, No. 5; April 24, Schumann's Symphony in B flat, knowu as "The Spriug Symphony."

The initial performance of the new symphonic song cycle, "The Trend of Time," lyrics by William H Gardner, of Boston, and music by Harry Girard ("Victor Kemp") of New York will be given early in the month of December, in New York City, with Mr. Victor Harris, acting as conductor, and the following well-known artists assisting: Mrs. Seabury Ford, soprano; Miss Marguerite Hall, contralto; Mr. McKenzie Gordon, tenor, and Mr. Harry Girard, baritoue.

Jan Kubelik, the violinist, made his first appearance in America at Carnegie Hall, New York, on the 2d instant. He was assisted by the Paur Symphony Orchestra and Miss Jessie Shay, pianist. Herr Rudolf Primi was the accompanist. The program follows: Overture, "Der Freischutz," Weber; Concerto, D major (with cadenza by Sauret), Paganine, Herr Kubelik; Larghetto and allegro-agitato, from Henselt's Concerto, Miss Shay; Concerto, No. 8, Spohr. Herr Kubelik; Scherzo, Litolff, Miss Shay; Carneval Russe, Wieniawski, Herr Kubelik.

Kreisler, the well-known violin virtuoso, will sail for this country on December 5, and will first be heard in Baltimore at the Peabody Institute on December 20. He will give several recitals in New York during the Christmas holidays On January 3 and 4 he will be the soloist with the Pittsburg Orchestra, with the Choral Symphony Society in St. Louis on the 9th, and with the Thomas Orchestra in Chicago on the 10th and 11th. He will give recitals in Detroit on the 14th, Peoria on the 16th, and in Philadelphia on the 18th. Kreisler will give only two recitals in Boston this season They will be on the 23d and 25th. On January 31 and February 1 he will be the soloist with the New York Philharmonic Society. During the month of February Kreisler will play with the Boston Symphony Orchestra, in Boston 14th and 15th, Brooklyn on the 17th, Baltimore on the 18th, Philadelphia on the 19th, and in New York on the evening of the 20th. During the latter part of February and during the month of March Kreisler will make a tour of the Pacific Coast.

Mme. Lillian Nordica, of operatic fame, is making a recital tour during the present season. She will not sing in opera, but will confine herself to these recitals. She is traveling in a private car, and if comfort has any virtue she should sing well. The car has been luxuriously fitted and furnished, so that Madame Nordica may experience as few discomforts as possible in her long journey that will cover four or five months and many thousand miles. A brass bed takes the place of the ordinary berth in the room devoted to Madame Nordica's own use and a bath opens out of it There are several other sleeping and dressing compartments, and aside from these the car is divided into a commodious observation section, in which are the piano, library and writing conveniences and dining room and kitchen and necessary paraphernalia Every possible means to lend enjoyment to the trip has been provided, and Madame Nordica left New York November 13, with enthusiastic anticipations for her season of song recitals, when she will be relieved from all exactions of operatic performances even though she provides the whole program for each appearance.

Josef Hofmann arrived on November 13 and began his labors at once, playing a recital in New Haven on the evening of the 14th. He will play with the Boston Symphony Orchestra on November 30. His season is already well filled with engagements.

Simeon Bissell, a well-known musician of Pittsburg, Pa., has suggested that a proper tribute to the memory of Frederic Archer should be placed in the Carnegie Music Hall, where he was organist for seven years. Mr. Bissell believes that it is due to the great organist that the memorial should be placed in the hall, either from the proceeds of a subscription from the general public, or by the board of managers.

Edwin H. Lemare, a celebrated English organist, is giving organ recitals in this country. He is a very fine organist. The following program was played in Boston on the Symphony Hall organ: Overture, in C minor, Hollins; (*a*) Die Antwort, Wolstenholme; (*b*) Meditation, in flat, Lemare; (*a*) D Prelude and Fugue, in D major, Bach; (*b*) Fugue a la Gigue, Bach; Improvisation: Vorspiel, "Parsifal," Wagner; Symphony in G minor (opus 35), Lemare; (Allegro Moderato, Adagio Cantabile, Scherzo, Finale).

It may not be generally known that, like the Boston Symphony Orchestra, the Pittsburg Symphony Orchestra also makes periodical tours. The first tour of the orchestra this season begins, November 18, at Sharon; November 19, Akron, Ohio, heard the orchestra, under the auspices of the Akron Tuesday Musical Club Wednesday afternoon, November 20, the Oberlin University gave a concert and at night the orchestra played in Cleveland. Nordica was the soloist. There are to be two more concerts this season at Cleveland, at one of which the piano virtuoso Zeldenrust will be the soloist, and at the other Schumann-Heink.

Gregory Hast, an English tenor, made his New York debut Monday afternoon, November 18, in a program of twenty-one numbers. A large audience greeted the artist, and among those who applauded him were the leading singers and musicians of the metropolis. The list of songs presented by Mr. Hast showed a wide range of schools, and at the same time established the singer as an artist of uncommon taste. His program follows: Es hing der Reif, Brahms; Die Mainacht, Brahms; Lockruf, Rückauf; Ein Ton, Cornelius; The Self-Banished (old English), Dr. Blow; Ma Mie (old French) (arranged by A. L.), ——; How Deep the Slumbers of the Floods (arranged by A. L.), Löwe; Ich wanderte unter den Bammen, Schumann; Minnelied, Brahms; Gone; The Letter (from Tennyson's Songs of the Wrens), Sullivan (1870); Le Baiser, Goring Thomas; Phillis Has Such Charming Graces (old English), Anthony Young (1625) (arranged by Lane Wilson); Rose Kissed Me To-Day, Dal Young; Ye People Rend Your Hearts (from Elijah) (by desire), Mendelssohn; If With All Your Hearts (from Elijah) (by desire), Mendelssohn; She is a Maid of Artless Grace, Taylor; Immortal Love (MS.), Arthur Nevin; O Were My Love Yon Lilac Fair, Somerwell; The Sands o' Dee, Clay; Roses in the Garden, O'Neill; To Mary, White. Mr. Hast's voice is a real tenor, his distinct enunciation, correct phrasing, sincerity, all commend him, and he has temperament.

ABROAD.

A statue of Liszt is to be erected in Stuttgart. The plan is fostered by the well-known Stuttgart pianist, Frau Kluckerfuss.

There were only thirty-seven concerts in Berlin's large halls last week, against thirty-nine the week before. This won't do. The musical season is simply going to the dogs.

Berlioz's "Benvenuto Cellini" was given its first performance in Stuttgart last week, and the fact was again demonstrated of the growing popularity of the composer in Germany.

The house in which Mendelssohn was born in Hamburg, it is said, is about to be destroyed. No one has been found apparently who could or would rescue this valuable relic to the world.

In Dessau, two new oratorios were heard, "Judith," by Herr Klughaidt, and "Ekkehard," by H. Rohr. Both were highly successful and are booked for a hearing in four other cities.

The court proceedings anent the estate of Brahms have been complicated afresh Another will is supposed to have been found among other papers, one of which is a letter to the publisher Simrock.

Gregorowitsch, the Russian violinist, who made a tour of this country five years ago, has arrived for his tour. He plays with the Philadelphia, Chicago and Boston symphony orchestras, and in Cleveland, Dayton and other cities.

Staveuhagen's appointment as director of the Munich Conservatory seems to have brought new life into the moth-eaten old institution There have been many changes in the personnel of teachers. Frau Professor Schröder-Hanfstaengel will conduct the vocal department, and Prof. Martin Krause has been added to the piano staff. The composer Beer (!) Wallbrunn will teach harmony and counterpoint. (The fact that Herr Wallbrunn is named Beer, and lives in Munich, should suggest an interesting psychological study for James Huneker.) The board of directors are also negotiating with a violinist of international reputation

Lilli Lehmann, Josef Hofmann, Ellison Van Hoose and an orchestra under the direction of Rheinhold Hermann, were the features of the first of the season of popular concerts, given by C. L. Graff at the Metropolitan Opera House, New York, on the 1st inst. Mme. Lehmann was heard, for the first time since her return, in the Wagner music she has sung so frequently in that city. With Ellison Van Hoose she sang the duet from the first act of "Tristan und Isolde" and the final scene of the opera. She also sang Beethoven's "Ah Perfido." Josef Hofmann performed the Rubinstein Concerto in G major and numbers by Chopin, Liszt and Moszkowski, accompanied by the orchestra. Mr. Van Hoose sang "Celeste Aida" and the prize song from "Die Meistersinger." The orchestral numbers were "Les Preludes," Liszt; ballet "Vineta," Herman; and the prelude to "Tristan und Isolde."

Col. J. H Mapleson, formerly a well-known operatic impresario, died in London, on November 14. Col. James Henry Mapleson was born in London in 1832. At the age of 21 years he entered the London Royal Academy of Music, and two years later was playing first violin in the orchestra of Her Majesty's Theatre. In 1849 he went into the provinces as manager of a troupe containing singers then famous. He spent several years cultivating his own voice, but an affection of the throat, followed by an operation, put a stop to his hopes as a vocalist's career In 1856 he translated Balfe's "Bohemian Girl" into English, and in 1858 he became the recognized director of Italian opera in London, at the Drury Lane Theatre. In 1861 he lost $15,000 while manager of Adelina Patti, and the next year he returned to Her Majesty's Theatre and began over again. June 11, 1863, he first produced "Faust" in London. He made his first tour of the United states in 1878 and made other visits in 1880, 1881, 1884 and 1885-6. No other manager ever had business relations with so many great artists and produced for the first time so many important works. Some of his new productions included "Faust," "Ballo in Maschera," "Carmen," "Hamlet," and "Falstaff." Col. Mapleson was the author of "Mapleson Memoirs," published at Chicago in 1888.

PUBLISHERS' COLUMN.

The music supplement of this number contains ten pieces, retailing in sheet form at from 20 cents to 50 cents each—amounting to a total of $3 40. Following are the ten pieces referred to above:

Yuletide Charm—A Descriptive Fantasie. H. Engelmann. Op. 540.
An interesting composition by a well-known writer; written especially for this number.

How Oft, When Watching Stars Grow Pale. Song. W. D. Armstrong.
Brilliant serenade for soprano or tenor. Words by Thomas Moore.

In the Gondola (Sweet Remembrance) F. Bendel.
Charming theme and graceful treatment; great favorite with good pianists.

The Mission of the Wind. Song. A. H Behrend.
Beautiful subject, and the limited compass makes it very useful. Words by Clifton Bingham.

Sleigh Ride (Troïka Fahrt). P. Tschaikowsky. Op 37, No. 11.
Descriptive composition of much merit and beauty; careful playing is required of each performer.

Banner March. L Ortlepp. Op. 1.
Spirited, quick march; a pleasing composition.

The Rabbit in the Bush. E Hasse. Op 52, No. 6.
From a collection of ten easy pieces entitled "The Childrens' Corner."

I Miss You, Dear. Song. F. A Williams.
A song of sterling merit, dignified and attractive. Words by Bruce Whitney.

Under the Christmas Tree H. Döring.
Pretty sketch, all in the treble clef—double notes in right hand, single notes in left.

Short Service Prelude for the Organ, No. 8. W. H. Clarke.
For description, see Organ Department of this number.

As it is our desire to include those compositions which will prove most useful, we solicit and hope to receive the opinions of our readers in reference to selections for future numbers.

***

The holiday number of THE MUSICIAN bears indubitable evidence of its especial importance. In addition to its increased size, it contains a great number of illustrations, some of which are published in this country for the first time. To crown all, the contents are of an unusually important character. Teaching problems of fingering, how to teach, playing in public, cultivating the memory, habits of observation, the time and manner of teaching touch, selecting music for teaching purposes, are discussed by the most prominent musicians in the professional world to-day. With the best wishes for a Merry Christmas and a happy and successful New Year, the publishers sent it on its mission.

***

Compare Our Prices with those offered by others.

***

Every Student of Music should read THE MUSICIAN.

***

It Pays to deal with a progressive, up-to-date house.

***

We have unequalled facilities for filling orders promptly.

***

We Make a Specialty of college, school and teacher trade.

***

You Should Have Our Catalogue and Professional Discounts. They will interest you.

***

The Musician wants active agents to solicit subscriptions. Full particulars sent upon request.

***

Any of our book publications sent subject to examination, without any obligation to purchase.

***

Our Success in Obtaining and Holding Trade, is the best evidence that our methods are modern.

***

A Gift that will be Appreciated by a friend interested in music: a year's subscription to THE MUSICIAN.

***

Our Catalogue is An Invaluable Aid in making a selection of suitable teaching material. Free to any address.

***

No Matter Where or When Published, we make it our business to procure any piece of sheet music or music book.

Our Descriptive Catalogue of sheet music and music books lists upward of 2,000 subjects. Yours for the asking.

***

The Musician wants the subscriptions of your friends and pupils. Will you use your influence in extending its circulation?

***

No other field of subscription work offers such liberal inducements. It pays to solicit subscriptions for THE MUSICIAN. Send for full particulars.

***

It is the aim of The Musician to inspire and encourage the teacher and pupil; to bring teachers of all sections in close touch with each other.

***

The "Hatch Edition" includes 77 numbers—see complete list on page 402. Without exception, it is the best low-priced edition of standard works.

***

We Carry a Complete Stock of American and Foreign publications of sheet music and music books, all of which are furnished at the lowest prices.

***

A Music Satchel is needed by every teacher and pupil. The three styles we handle are the best made, and are offered at prices lower than elsewhere.

***

If you are not satisfied with the way in which your orders have been filled by others, why not give the Hatch Music Company a trial, and test their ability?

***

We are Experts in Selecting Music suitable for the needs of teachers, and experts in selecting music for all special purposes. Test our ability in this line.

***

If you believe in THE MUSICIAN, tell your pupils and friends and help build up its clientale. How many subscribers will you send us before the close of the year?

***

Our Premium List illustrates how it is possible to procure a library of standard musical works by a little earnest effort in securing subscriptions for THE MUSICIAN.

***

The Fact that special departments inaugurated by THE MUSICIAN have been copied by other journals, attests the originality and practical worth of this journal.

***

Our Plan of Sending Music "On Sale" interests teachers. Complete information regarding this important branch of our business will be sent upon request.

***

Our system of selecting music to fill "On Sale" orders guarantees the receipt of: Latest Publications, Best Editions, Music Adapted to Your Needs, Entire Satisfaction.

***

Special Novelty Offer: An original plan by which you may obtain one copy each of our new sheet music publications at a nominal price. Full particulars upon request.

***

Sample Copies of The Musician, order blanks, receipts, full particulars regarding commissions and all other needful information, will be furnished those who wish to solicit subscriptions.

***

Maelzel Metronome—Best Make. Our guarantee covers all defects in material and workmanship. Without bell, $2.50; with bell, $3.50. Special prices for six or more furnished upon application.

***

This Number of The Musician contains eighty-eight pages, exclusive of the cover, and is filled with matter that cannot fail to prove interesting and valuable to teacher, student and lover of music.

***

It pays to subscribe for and read a music journal that contains, each month, the best thoughts of the leading teachers and writers. If not already a subscriber, we hope to have your subscription for 1902.

***

Our Best Efforts are directed to filling all orders with care and promptness, and we take particular pains to make our methods of doing business entirely satisfactory to those who favor us with their patronage.

Each Number of the "Hatch Edition" has been carefully revised, fingered and annotated by one of America's leading teachers. This is a *special feature* not to be found in any other edition of the same works.

***

See page 4 of cover for a description of the **"National Graded Course,"** and for our offer to send a complete set—seven grades—subject to examination and approval, without any obligation to purchase.

***

Music Teachers will Confer a Favor by sending us the names of pupils and friends who are not subscribers, but who would be benefitted by subscribing to THE MUSICIAN. Sample copies will be sent to the addresses furnished.

***

Magnificent Half-Tones of the Masters. These portraits (reproductions from crayon drawings *made especially for* THE MUSICIAN), are printed **on heavy translucent bristol.** Size of each print, 10½x14 inches. See list and price on page 403.

***

Christmas Dictionary Club. On page 365 of this issue we announce the formation of a Christmas Dictionary Club. Both price and terms of payment are extremely liberal. No teacher or student *can afford* to longer deprive themselves of this Great Reference Work.

***

It is the aim of the Publishers to keep the readers of THE MUSICIAN well informed on all new ideas in the art of teaching; to bring to their notice valuable aids and suggestions; to give helpful advice; to contribute to the accomplishment of more and better work.

***

Character and Quality are characteristics of publications bearing the imprint of the Hatch Music Company. Cost of production is of secondary importance, and all of our efforts are directed toward making the best possible edition of a piece of music or a music book.

***

Each Grade of the "National Graded Course" contains an extensive list of sheet music and music books recommended for use in connection with that particular grade. These lists have been carefully selected, and they form a valuable reference library for the use of teachers.

***

The Musician Makes no Promises of what it proposes to do next month or next year, as an inducement to secure subscribers, but each number speaks for itself and demonstrates that it is the broadest and most progressive music journal published in America. If you have not yet interested your pupils in THE MUSICIAN we hope that you will point out the advantages to be derived from the intelligent use of a journal of this character.

***

We Have Just Issued a thirty-two page pamphlet which contains, in addition to a Prospectus of THE MUSICIAN for the year 1902, a complete list of the Premiums offered in connection with subscriptions. The list includes a great number of books and articles needed by musicians, and the prices at which they are offered, in connection with a subscription to THE MUSICIAN, are less than the actual cost of production. If you have not received this pamphlet, please send for a copy.

***

The Christmas Vox Organi Club: On page 404 of this issue, we announce the formation of a club, limited to twenty-five members, for the purpose of distributing twenty-five sets of Vox Organi, edited by Dudley Buck, at one-half of the regular price ($10.00 instead of $20.00), and upon easy monthly payments extending over a period of five months. This offer should interest every organist. Join at once if you desire to take advantage of the price and terms, as we are compelled to limit the membership of the club.

***

William H. Sherwood's Opinion of the National Graded Course.—"I am happy to state that the National Graded Course is remarkably well adapted to the needs of teachers and students of music. Your claim in regard to the excellent grading of the studies is a thoroughly just one. I do not think that I have ever seen as good a succession of topics and exercises arranged as they are from the beginning on, using the best kind of material from all sources, and without any superfluous pages. I use the Course and recommend it to all of my teacher pupils."

THE BURROWES MUSICAL KINDERGARTEN METHOD

INSTRUCTION FOR TEACHERS BY HOME STUDY

TEACHERS are reminded that the Burrowes Method may be advantageously acquired at any season of the year.

Write for particulars.

THE BURROWES METHOD was built up for children and from actual study of the needs, preferences, character, and even the whims of children. The authoress has taught a musical kindergarten for many years, during which she has composed songs, invented games, and constructed apparatus too numerous and varied to mention or describe; and of these only the most valuable have been retained. Everything that was dull, cumbersome, ineffective, or unchildlike has been abandoned, and what remains has been tested through and through, and its value proved beyond the shadow of a doubt. There is nothing in it that is not agreeable and entertaining. **IT IS NOT BUILT ON MERE THEORIES.** It is not the inspiration of a day. It is, on the contrary, the **CREAM OF FIVE YEARS OF SPECIAL EFFORT,** and the fruit of many other years of toil and study. The results speak for themselves.

MUSIC TEACHERS OF ALL GRADES should investigate this work. **ADVANCED TEACHERS** will profit largely by establishing kindergartens in charge of an assistant or partner, thus creating a preparatory department which will act as a feeder to the advanced classes. The advantages of the Method to **YOUNG TEACHERS** are obvious.

All Teachers who have not seen the Art Souvenir Booklet (mailed Free to Teachers) should send their addresses at once.

FONTLEROY HALL SCHOOL, Roxbury, Boston.
DURHAM CONSERVATORY, Durham, N. C.
DETROIT CONSERVATORY OF MUSIC, Detroit.

Original Kindergarten System In America and Europe

THE AIM OF THE FLETCHER METHOD

Is to reduce the difficulties which the study of music causes to children and to give a Fundamental, Systematic and Logical Musical Education in a way that shall be thorough, natural and pleasurable, and thus make it possible for Music to exercise her threefold power and to develop the child physically, mentally and artistically.

FLETCHER MUSICAL ASSOCIATION

In connection with this system, and for the benefit of its teachers, the Fletcher Musical Association has been formed. The object is to promote unity and strength of purpose among the teachers, and to keep every teacher in touch with all new and good ideas which bear on the teaching of music to children.

Fletcher Musical Association Bulletin

This is a paper edited three times a year for the benefit of the Fletcher music teachers.

Evelyn A. Fletcher-Copp, the originator of the Fletcher Music Method, spent five years studying music abroad and has since successfully introduced her system in London, Berlin, Leipsic, Brussels and Paris. Already the demand in these foreign centers is so great that Mrs. Fletcher-Copp has arranged to teach a Normal class every second year in London or Berlin. The advantages to teachers of being brought in touch with the latest European musical ideas which this regular recurring visit to Europe entails are obvious. Realizing the inadequacy of teaching by correspondence, and recognizing the great value of the system musically, Mrs. Fletcher-Copp continually refuses applications from those who desire to study by mail, and her certificate of authorization to teach her method can only be obtained by those who study with her personally.

My Dear Miss Fletcher:

Allow me to convey to you the unanimous delight and interest expressed by the teachers of the Synthetic Guild after your demonstration. Personally your talk and the exhibition of your appliances filled me not only with admiration but gratitude. In these days when little children are set at such a multiplicity of studies, and such unreasonable demands are so often made upon teachers, it is a relief to know that some one has found an incline plane by which Parnassus may be reached even by the little folks. It seems as if your kindergarten system were a sort of funnel through which true ideas may be carried into every intelligent method of either vocal or instrumental music, and as such all teachers must give you a hearty indorsement.

Yours very truly, KATE S. CHITTENDEN.
President of the Synthetic Guild.
President of the Metropolitan College of Music.
Vice-President and Dean of the Faculty of the American Institute of Applied Music.

A few of many letters received from world-renowned musicians:

New York, Jan. 1, 1900.

My Dear Miss Fletcher:

I was deeply impressed recently with the force and simplicity of your Method. * * * There can be no discussion of the value of your Method of work because the results are perfectly in evidence and cannot be disproven—they speak for themselves. With best wishes for your success in this country, I am

Sincerely yours, GERRIT SMITH,
Hon. Pres. American Guild of Organists.
Past Pres. Manuscript Society, New York.

Mr. William H. Cummings writes:

The Guildhall School of Music,
Victoria Embankment, E. C. (Near Blackfriars Bridge)

* * * It was evident that Miss Fletcher possessed an exceptional gift as a teacher, and that her system would very speedily enable young students to attain proficiency in all the essential knowledge which is indispensable to vocal and instrumental performers.

WILLIAM H. CUMMINGS, Principal.

June 1, 1899.

In answer to your question regarding the Fletcher System, allow me to say that it has my strongest endorsement. Every school where a course of music is pursued should adopt this method.

Yours truly, ALBERT A. MACK,
Music Director at St. Mary's School, Raleigh, N. C.

I have taught the Fletcher Music Method now for about three years, with increasing satisfaction as to results. It has helped me wonderfully, not only directly with my junior pupils, but in broadening and deepening all my work, and solving many knotty problems of teaching. There is nothing one-sided about it, eye, ear, fingers, brain, memory, imagination, all are reached and made to contribute their share to the general musical culture. Further, it is a delight to the children, who learn easily, love their classes, and later on their practice, finding it no hardship, to the great surprise of their parents.

ROBERTA GEDDES-HARVEY, Mus. Bac.,
(Trin. College). Organist of St. George's Church, Guelph, Ont.

Dr. William Mason says:

New York.

The Fletcher Method seems to me well adapted to the rapid and thorough accomplishment of of its purpose because of its tendency to immediately arrest attention, to arouse interest and thus to promote a habit of mental concentration on the part of young children. Games, sports and pastimes constitute a powerful force in our early education because, through their agency, knowledge is quickly inducted and woven into each personal experience. Miss Fletcher's method being based upon this principle, appears to me well adapted to the accomplishment of the desired result, and with ease to the pupil, because the sense of drudgery is minimized.

For further particulars address E. A. FLETCHER-COPP, **Home Address,** 99 Francis St., Brookline, Mass. **New York Address,** 1125 Madison Avenue.

The "Hatch Edition"

Diminished reproduction of cover plate used on the "Hatch Edition."

All numbers included in this list have been carefully edited and annotated by leading American teachers, our corps of editors including: W. S. B. Mathews, Wm. H. Sherwood, Frank H. Tubbs, Frederic W. Root, R. S. Goldbeck, Jaroslaw de Zielinski, J. S. Van Cleve, Thos. a'Becket, Wilson G. Smith, H. C. Macdougall, Bernhard Listemann, etc. This important work has never been attempted by any other publisher. The engraving, paper, printing and binding are superior in every respect—each the best of its class. Regardless of the additional expense involved in the publication of annotated editions, prices have not been advanced, but are the same as those charged for ordinary reprints of the works included in this list.

VOICE.

No. 48. ABT. Op. 474. Practical Singing Tutor. For Soprano or Tenor. Complete 1 50

"Hatch Edition"
LATEST ISSUES

No. 74. HEINS. Album for the Pianoforte. . . Paper 50
An interesting group of compositions of about the third grade, selected and combined with a view of affording both instruction and amusement. Heins is celebrated for melodious themes, and for their brilliant and showy treatment. On account of their brilliancy, and because they lay well under the hand, many of his works are favorite as solos for commencements and public entertainments. The selections contained in this Album include many of the best examples of the author's art and furnish pleasing contrasts.

No. 75. GÄNSCHALS. Album for the Pianoforte. Paper 50
Any collection of musical compositions of this character should contain the author's best works, but it is none the less important, in order to avoid monotony, that the selections shall present strong contrasts. In the compilation of this Album, the editor has exercised extreme care and splendid judgment. There is a generous variety of style, and altogether it is a splendid collection, one that cannot fail to please students as well as those in search of pleasing music for recreation and amusement.

No. 76. BOHM. Album for the Pianoforte . . . Paper 50
This collection covers the great breadth and range of his works, presents them in several grades of difficulty, and illustrates his various moods. Not only as a means of recreation will this work prove interesting; it will be found valuable for the purpose of study, for at his best Bohm needs study if his compositions are to be well played.

No. 77. BEHR. Album for the Pianoforte . . Paper 50
A glance at the contents shows the wide range of subjects covered. All are treated in a manner that cannot fail to prove both interesting and valuable to the student. The collection presents contrasts in style and rhythm and contains material to please all tastes. None of the compositions are above the second grade.

Guide to Practical Musicianship
For Students of Piano, Organ or Violin.
By A. J. GOODRICH.

In his new system, the author does away with the old and slavish process of rote memorizing, *i. e.*, playing notes and repeating them until memorized, without attempting to master the composer's design; and he illustrates the means by which intelligent students may, in a comparatively short time, master any composition that does not present technical difficulties beyond their conception.

The results are three-fold: (1) A great economy of time; (2) An intelligent understanding of compositions; (3) An improved memory.

Professional musicians, practical teachers, amateur musicians and students of music have long felt the need of some improved method that would reduce the time required to memorize a composition, and Mr. Goodrich presents a method that he subjected to a thorough and exhaustive test, with eminently satisfactory results, before putting his ideas in shape for publication. It is the author's firm belief that, by its aid, compositions may be mastered in from one-quarter to one-half the time required by old systems.

Every musician needs a copy of "Goodrich's Guide to Practical Musicianship."

Paper Binding. Price, $1.00.

MUSICIAN CLUB LIST.

A complete list of publications offered at club-rates with SUBSCRIPTIONS to THE MUSICIAN, is given below.

By taking advantage of this offer, it is possible to obtain one of these publications and THE MUSICIAN at but trifling advance over the regular subscription price of the other periodical.

It Will Pay to Examine This List.

A New, Revised and Enlarged Edition of

BRANZOLI'S

THEORETICAL AND PRACTICAL METHOD FOR THE MANDOLIN

English and Italian Text. **Used in All the Leading European Schools.**

Branzoli's is, without exception, the best theoretical and practical method of instruction for the Mandolin ever published, and it is so well and favorably known to teachers generally that a detailed description of the work itself seems needless.

Our edition, reprinted from the latest European edition, after careful revision and editing by Mr. Benj. F. Knell, embodies a number of new and important features, including: values of notes and rests, intervals and minor details of musical theory; additional examples designed to show, in the most explicit manner, how the various exercises should be played; clear instructions regarding the pen stroke needed for varying degrees of speed; lucid and easily understood examples of the various graces, and an illustrated explanation of triplet playing; all positions are clearly marked, and the entire work has been fingered with great care.

A unique and very important feature is the introduction of Mr. Knell's "Tone Studies," illustrated by half-tone cuts showing hand positions.

Our edition contains 168 progressive lessons, a choice collection of duets, and the scales and chords in all major and minor keys. All inaccuracies of the original edition were corrected and all uncertain examples clearly explained. For the purpose of placing them in direct connection with the subjects under consideration, a number of studies have been transposed. Particular attention is called to the editor's annotations, which cannot fail to prove valuable to both teacher and pupil.

Our edition is printed from new plates. The engraving, paper, printing and binding are superior in every respect—each the best of its class.

Ask for the Hatch Edition. Take no other, if you want the best.

Half Cloth Binding. Price, $2.00.

SIXTY PROGRESSIVE EXERCISES

FOR THE PIANOFORTE

By J. PISCHNA

Edited by Anton Door

These celebrated studies, a standard text-book at Vienna, Berlin, St. Petersburg, Moscow and other well-known European Conservatories, may be used by the young student as well as by the *virtuoso*. While they are not easy, they can be taken up at an early stage of music study and carried on through increasing grades of speed until the highest proficiency is obtained. For acquiring independence of the fingers, and for rapidly strengthening the fingers and hands, they are unequalled. Although in one sense progressive, the variety of work offered is such that exercises needed in each particular case may be selected for practice without following the regular numerical order.

It may not be out of place to call attention to several important improvements which make our edition vastly superior to the original. Instead of grouping the preparatory studies in the opening pages, they immediately precede the exercises which they are designed to illustrate. All groups abbreviated in the original have been engraved out in full so that each note is clearly presented. Relieved of mental worry, students are thus enabled to give undivided attention to the mechanical process. The entire work has been carefully revised and annotated.

While the improvements noted above have materially increased the number of pages and cost of publication, the price has been cut in two. The original sells for $2.00.

Paper Binding. Price, $1.00.

Cramer's 50 Selected Studies.

Systematically Arranged. Fingering and Marks of Execution Critically Revised, with Instructive Notes. Exhaustive Preface.

Edited by DR. HANS VON BÜLOW.

English Translation by LOUIS ROTHFELD

A new, correct and elegant edition of these celebrated studies. The belief that there was room for another edition was based upon the fact that all others, whether good, bad or indifferent, sell for $2.50 per copy, while this, which is superior in many respects, is offered for $1.50—a reduction of 40 per cent from the established price. The reduction in price does not, in any way, reduce the quality of the work, as the plates, paper, printing and binding are of the highest order of excellence.

Paper Binding, Cloth Back. Price, $1.50.

MODERN STUDIES

In Phrasing and Interpretation.

By W. F. SUDDS.

It is now very generally admitted that a separation of the mental and physical features is the best plan for imparting instruction in the study of music. Both may be studied at one time, but it is a mistake to suppose that mental training is the result of physical effort.

To insure proper performance of a composition, the mental concept must be perfect. A pianist possessed of brilliant technic, acquired only by long and faithful practice, may mar a good work because of inability to interpret the author's ideas, just as one may recite the *words* of a poem without a proper appreciation of their meaning and without a correct grouping into phrases. To thoroughly enjoy a musical work one must be able to analyze it, and "Modern Studies in Phrasing and Interpretation" presents the means of doing this in a most comprehensive and intelligent form.

Want of space prevents a detailed description but we shall be glad to send the work subject to approval, so that any one may test our assertion that this is a thoroughly modern and practical exposition of the subject.

Paper Binding. Price, $1.00.

THE CHILD'S MUSIC WORLD

BEING CHAPTERS ABOUT THE STUDY OF MUSIC.

By THOMAS TAPPER.

The purpose of this book is to serve as a suggestion to teachers who desire their students to become acquainted with the Story of Music. It is not the purpose to present names, dates and facts to be painfully memorized and easily forgotten. Experience teaches that the facts of history take place and interconnection in the mind very slowly; it also teaches, that if general principles and tendencies are appreciated first it is all the easier to put in the details afterwards.

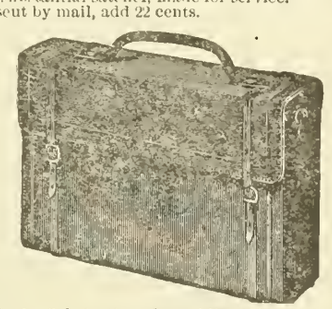
The principal points, then, are these: I. Implant early in life as many fundamental principles as possible. II. General principles first, details afterwards. III. Isolated facts have no value. IV. True education demands activity. *We know what we do.* The basis of all knowledge is personal experience. V. Hence, a teacher should create activities and direct them.

There are numerous references throughout the work which will enable teachers, and others who desire, to investigate many interesting themes beyond the point justified in a book of this kind. An excellent basis for talks on History by teacher to pupils.

Cloth Binding. Price, $1.25.

No. 1. Smooth grain leather, black or brown, $1.35.
Avoids all necessity for rolling sheet music.
If to be sent by mail, add 11 cents.

No. 2. Seal-grain leather, black or brown, $2.70.
Avoids all necessity for either rolling or folding sheet music or books. A substantial satchel, made for service.
If to be sent by mail, add 22 cents.



No. 3. Sole leather flannel lined, black, $3.25.
Full sheet music size, will last a life time.

METRONOMES

FULLY WARRANTED.

MAELZEL SYSTEM

ACCURATE AND RELIABLE.

Quick and Easy Method of Measuring Time.

We advise the use of a Metronome, so that time may be correctly interpreted. We offer two styles at special prices:

Mahogany, without Bell, $2.50.
Mahogany, with Bell $3.50.

Prices quoted do not include Express or Mail. If ordered by mail, add 40 cents to the price quoted for each style.

Magnificent Half-Tones OF THE Masters

WITHOUT EXCEPTION THE BEST PORTRAITS EVER OFFERED AT ANY PRICE.

NOW READY: BACH, BEETHOVEN, BRAHMS, CHOPIN, GOUNOD, HANDEL, HAYDN, LISZT, MENDELSSOHN, MOZART, RUBINSTEIN, SCHUBERT, SCHUMANN, TSCHAIKOWSKY, WAGNER, WEBER.

THESE magnificent half-tones (Reproductions from Crayon Drawings *made especially for us*) are printed on **Heavy Translucent Bristol.** Size of each print, 10¾ x 14 inches. Eminently worthy of framing, and of a conspicuous position in music studio or library.

In addition to portrait, each sheet has the name of the Master, together with the dates of birth and death, neatly printed.

Price, Postpaid, Only 15c. Each.

WITH

Practical Suggestions TO Students of Music.

Is Entirely New and Superior to Anything of Similar Character That Has Ever Been Offered.

The Tablet is 6⅞ x 10¾ Ins.

It contains 100 Sheets—each with 12 staves. The paper is first-class—suitable for writing with either pen or pencil. The leaves are perforated so that they can readily be removed. Second page of cover contains, for ready reference, the following: Notation, Display of Tetrachords, Cycle of Keys, Condensed History of the Minor Scale, Relationship of the Minor Scale. Manchester's is so much superior to all other tablets, that an examination will insure its use.

Price, 20 Cents.

By Mail, 28 Cents.

Liberal discount when ordered in quantities.

SEND TO THE PUBLISHERS OF THE MUSICIAN FOR ANYTHING NEEDED IN MUSIC.

Limited to Twenty-five Members

We take pleasure in announcing the formation of a CHRISTMAS VOX ORGANI CLUB, limited to twenty-five members, and formed for the purpose of distributing twenty-five sets of "VOX ORGANI" at a reduction of fifty per cent. ($10.00 instead of $20.00) from the regular price and upon easy monthly payments extending over a period of six months.

VOX ORGANI

Latest Edition. Four Large Volumes. Bound in Cloth, with Gold Side Stamp and Gilt Edges

A Collection of Music for the Organ
Written Expressly for This Work
By Eminent Composers of Europe and America

EDITED BY **DUDLEY BUCK**

Every practical organist has experienced the difficulty of securing an adequate and satisfactory supply of desirable music for ordinary church services and for festival occasions. Other collections are made up of material the best of which has become, by frequent use, more or less hackneyed, and as each compiler has drawn largely upon the same source of supply these collections duplicate each other to a considerable extent.

"Vox Organi" contains a choice collection of organ music written expressly for the purpose by the most eminent composers of Europe and America at the special invitation of the editor, Dudley Buck, whose knowledge as a practical organist and whose judgment as a composer of church music are a sufficient guarantee that this collection is well suited to the requirements of the average organist.

In order to secure the services of European composers, Dudley Buck visited London, Paris, Berlin and other musical centres, and thus obtained valuable manuscripts from many well-known writers.

Among the European contributors are the following:

ALEXANDRE GUILMANT	OLIVER KING	W. G. WOOD
HENRI DESHAYES	BERTRAM L. SELBY	J. E. WEST
OSKAR WERMANN	HAMILTON CLARKE	H W WAREING
OTTO THOMAS	C. J. FROST	EDWARD BUNNETT
J C. BRIDGE		C. H. LLOYD

The following Americans also contributed to this work:

JOHN K. PAINE	ARTHUR FOOTE	GEO. W. CHADWICK
HORATIO W. PARKER	J. FRANK DONAHOE	HOMER N. BARTLETT
I. V. FLAGLER	JOHN S. CAMP	G. M. DETHIER
F W. BATCHELDER	HERVE D. WILKINS	JOS. MOSENTHAL
GERRIT SMITH	BRUNO O. KLEIN	J. H BREWER
H. H. HUSS	R. H. WOODMAN	H. M. WILD
W. W. GILCHRIST	JOHN M. LORETZ	F. G. GLEASON
J A. WEST	H. M. DUNHAM	DUDLEY BUCK

(The above lists include only one half the coutributors to the complete work.)

The compositions include the following forms:

Offertoire	Cantilene	Melody	Barcarolle
Pastorale	Postlude	Largo	Reverie
Romauce	Meditation	Commuuion	Prayer
March	Intermezzo	Fantasia	

All contributions written for three manuals are capable of relatively easy adaptation to an organ of but two manuals. Fugues and other technical or unusually difficult compositions are not included. In short, the music has been written with special reference to the needs of the average church organist, not as concert *tours de force* on the part of the composers, and it is

A WORK THAT EVERY ORGANIST SHOULD POSSESS

Volume 1 **Contains:** Commuuion—Alex. Guilmant, Op. 82, No. 1; Contemplation—Alex. Guilmant, Op. 82, No. 2; Pastorale—G. W. Chadwick; Meditation—I. V. Flagler; Postlude—Bertram L Selby; Offertoire—J. M. Loretz, Jr.; Evening Hymn—J. C. Bridge; Festal Song—John E. West; Andantino—Henry M. Dunham; Andante Con Moto—Henry Deshayes, Op. 23; Pastorale—Harrison M. Wild; Andante Religioso—Oliver King, Op. 92, No. 1; Idylle—J. C. Bridge; Alla Marcia—Oliver King, Op. 92, No. 2; Cantabile Tranquillo—Henri Deshayes, Op. 23; March—John S. Camp; Scherzo Pastorale—H. W. Wareing; Melody—John S. Camp; Intermezzo—Bruno Oscar Klein; Romance—Hamilton Clarke; Early Morn at the Monastery—Bruno Oscar Klein; Prelude—I V. Flagler; Pastorale—Hamilton Clarke; Canzonet—H W. Wareing; Festival March—Joseph Mosenthal.

Volume 2 **Contains:** Festival Prelude—Dudley Buck; Prayer and Cradle Song—R Huntington Woodman; Postlude—Horatio W. Parker; Prelude—J Frank Donahoe; Minuetto—Edward Bunnett; Idylle—Gaston M. Dethier; Evening Prayer—Bruno Oscar Klein; Andante—Harrison M. Wild; Offertoire—E. E. Truette; Meditation—N H. Allen; Postlude—Walter H Lewis; Andantino—Herve D. Wilkins; Allegro Agitato—C. H. Lloyd; Introduction and Theme—Geo. W. Chadwick; Dirge—Oskar Wermann; Alla Marcia—Henry Holden Huss; Cradle Song—Homer N. Bartlett; Offertoire F. W. Batchelder; A Fancy Sketch—C. J. Frost; Andantino—Otto Thomas; Offertoire—John J. O'Shea, Jr.; Communion—Geo F. Hamer; Postlude—C. J. Frost; Prelude—F. N. Shaekley; Triumphal March—John Hyatt Brewer.

Kroeger, Op. 30, No. 1; Andante Pastorale—Chas. Steggall; Postlude in G major—Arthur Foote; Contemplation—Chas. Vincent; Impromptu—J. Frank Donahoe; Postlude—George E. Whiting, Op. 53.

"Vox Organi" is complete in four volumes handsomely bound in cloth, with gold side stamp and gilt edges, the sheets being sewed on tapes to insure flexibility and strength. Each volume contains 128 pages of music (size 9 x 12) printed from carefully engraved plates on fine paper; the type is clear and legible.

OUR CHRISTMAS VOX ORGANI CLUB

It was the intention of the publishers, the J. B. Millet Company, to limit the edition to filling the actual subscriptions received as the result of a single canvas of the organists of this country and Europe. Orders were taken in advance of publication, subscribers agreeing to receive and pay for the volumes as issued, and no subscription was received for less than the complete set of four volumes. The work has never been for sale in regular music stores After filling all subscription orders, the publishers have twenty-five sets of "**VOX ORGANI**" which they authorize us to sell at $10.00 per set (Regular Subscription Price, $20.00). In order to insure a perfectly fair distribution of the books, the only announcement will appear in the December MUSICIAN.

Limited to Twenty-five Members

As explained above, there are only twenty-five sets, hence the Club will be completed upon receipt of the twenty-fifth order. The cost of the work and its handling barely allows the return of our investment, to say nothing of the expense involved in advertising the distribution. Those who take immediate advantage of this exceptional offer can procure "**Vox Organi**" at a greatly reduced price and upon terms of payment which limit the outlay to *less than seven cents per day.* Please remember that this offer applies to only

25 Sets at 50 Per Cent. of the Regular Price

(Regular Price, $20.00. Club Price, $10.00)

Both price and terms of payment are extremely liberal. *Less than seven cents a day* for six months will secure possession of this valuable work. As a Christmas gift to an organist, nothing could be more appropriate or more useful. But as the Club is positively limited to 25, the importance of joining at the earliest possible moment, in order to secure membership, is apparent. The initial payment of $2.00 will be promptly returned to those whose applications are received after the membership is completed. The full amount ($10.00) is

PAYABLE IN FIVE MONTHS—$2.00 PER MONTH

(Less than 7 Cents a Day)

HOW TO JOIN THE CLUB Send $2.00 with letter stating that it is first payment for a set of "**VOX ORGANI,**" and for membership to the **CHRISTMAS VOX ORGANI CLUB.** Each membership will be acknowledged upon receipt, and the books will be shipped by express or freight, as ordered. In the absence of specific instructions they will be shipped by express. The other payments will extend over a period of **five months,** divided into **four** payments of **$2.00 each,** the first being due and payable **one month** after shipment, and the others at an interval of one month each.

Please Remember

That this offer is limited to a Club of 25.
That the Club will be completed upon receipt of the 25th order.
That each set contains four volumes.
That payments are to be made as follows: $2.00 with order; $2.00 per month, for four months.
That you have the use of the entire set of books for five months before the last payment falls due.
That it is to your interest to join the Club at once, so that your order may be received before its completion.

HATCH MUSIC COMPANY, EIGHTH AND LOCUST STREETS, PHILADELPHIA, PA.

To join the CHRISTMAS VOX ORGANI CLUB, carefully fill out this blank and mail it to the Hatch Music Company.

Date *190*

Hatch Music Company, 236 S. 8th St., Philadelphia, Pa.

Please forward one complete set of "**VOX ORGANI.**" I agree to receive and pay for same a total of Ten Dollars, in the following manner, viz.: Two Dollars with this agreement, and each and every month after shipment of books, the sum of Two Dollars, remitting same to the **Hatch Music Company** by bank draft, P. O. money order, express order or registered letter, until the entire amount is paid.

The title and ownership of said books shall not vest in me, but books delivered shall be held by me as the property of Hatch Music Company until paid for in full. In event of my failure to pay any one of said monthly payments for 30 days after the same has become due, I hereby agree, if so requested by the said Hatch Music Company, to carefully pack and ship the said set of books to the said Hatch Music Company in good condition and in such manner as the said Hatch Music Company may direct; or at its option, the said Hatch Music Company may take, or cause to be taken, the set of "Vox Organi," either with or without process of law, it being expressly understood and agreed that the money already paid shall be forfeited for the use and wear of said books. All transportation charges to be paid by me.

NOTE.—Unless otherwise ordered, books will be shipped by Express. If Express Office differs from the Post Office given below, please give full shipping instructions.

Club Members with whom we have no regular account will please give full name and address of two references. As references we prefer business houses, in your own or other cities, with whom you have accounts. Careful attention to this request will avoid unnecessary delay in acceptance of membership.

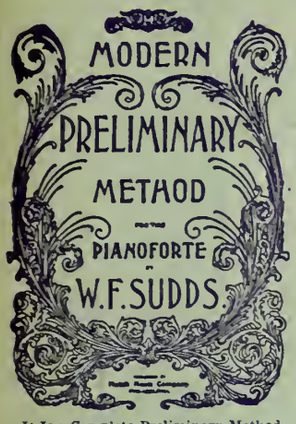
MODERN PRELIMINARY METHOD

FOR THE PIANOFORTE



Embodying the Latest and Most Approved Systems Conducive to Rapid Progress and Artistic Interpretation.

By W. F. SUDDS.

As its title implies, this Method is modern, contains the newest ideas and their practical application.

Among the many excellent features of the Modern Preliminary Method, we direct attention to the following:

The Rudiments are very progressive and explained with such clearness that the pupil cannot fail to comprehend them.

The Various Touches are clearly set forth and are accompanied by illustrations, showing the movements of finger, hand and arm.

The Correct Principles of Touch and Technic are illustrated.

The Scales are introduced in an effective manner.

Proper Use of the Pedals is given particular attention.

The Explanation of the Minor Mode is such that it can be readily understood.

Five-finger Exercises are judiciously used, but not in the usual enormous quantity that disgusts and discourages the pupil.

The Musical Illustrations attending the various principles are taken from the best composers, of whom short sketches are given.

The aim is to teach and illustrate one thing at a time. By a judicious contrast of subjects, weariness is avoided.

Four Hand Pieces are introduced to promote steadiness and inspire confidence in the pupil.

A Copious and Carefully Compiled Pronouncing Dictionary is included.

It Is a Complete Preliminary Method—a work that cannot fail to interest both the practical teacher and the earnest student.

Modern Preliminary Method is a book of 144 pages (10 x 13 inches), printed from entirely new plates on the best grade of music book paper.

Half Cloth Binding. Price, $1.00.

KULLAK'S SEVEN OCTAVE STUDIES

From the School of Octave Playing. Op. 48, No. 2.

Revised and Annotated, with Introduction and Practical Directions for Study, by

WILLIAM H. SHERWOOD.

While numerous exercises for the practice of octaves have been presented to the musical world by virtuosi and masters, Kullak's is the only method or "School" of octave playing that has become a standard. But good as they are in their original form, it is remarkable how much the usefulness of these studies has been enhanced by Mr. Sherwood's revision and annotations. A broad foundation embodying the general principles involved and the method by which the end may be most satisfactorily attained is laid in his Preliminary Remarks; instructions and suggestions for technical preparation are given in his "Notes on the Studies;" each study is *treated in detail*. Each movement of the hand and arm is designated by an ingenious device and these characters, elaborately used throughout the text, show the student *exactly* how the hand should approach and leave the keyboard in performing various passages. The progressive teacher will appreciate the importance of Mr. Sherwood's editorial work, and especially so since he gives, for the first time, his system of of instruction in octave playing.

Regardless of the great expense involved in the preparation of this edition, the price is the same as that charged for the ordinary reprint.

Paper Binding. Price, $1.25.

Classic Piano Solos for Young People

VOLS. 1-2.

ELEGANT COLLECTIONS BY WELL-KNOWN WRITERS.

Classics selected for the young are frequently of the dryest character and students are too apt to absorb the idea that good music *must be dull*. In the preparation of these collections the requirements of the youthful mind were kept in view, and the selection of works will prove that music of an advanced standard can be pleasing as well as useful in the formation of a correct and pure musical taste. These works are unequalled by any similar publications of corresponding grade. A critical comparison will establish our claims of superiority.

Paper, with Cloth Back. Price, $1.00 Each. Half Cloth. Price, $1.25 Each.

CLASSIC PIANO SOLOS

VOLS. 1-2.

Superb Collections by Eminent Authors.

While the contents of Volume 1 is largely made up of the works of the older masters, with but few exceptions the pieces included in Volume 2 are the works of the more modern classical writers, many of whom are still living. All of the compositions of both volumes are within the capabilities of the ordinarily good performer and will be found most interesting whether used for purposes of recreation or instruction. We ask a critical examination and comparison with works of similar character.

Paper, with Cloth Back. Price, $1.00 Each. Half Cloth. Price, $1.25 Each.

BUSSLER'S PRACTICAL HARMONY

Newly Revised and Corrected Edition

Authorized Translation from the Third German Edition by N. GANS.

Without exception, the best and most practical work on this subject ever published. The author is a noted German theorist, whose works are known, used and held in high esteem at all the most prominent European colleges and conservatories. The demand for PRACTICAL HARMONY has been so great that three revised editions have been printed in Germany. Ours was translated from the third German edition, by a writer selected by the author. It is, as its title indicates, a thoroughly practical work, embracing the latest and most approved methods. It is simple, is illustrated by practical examples, and is eminently suited for a seminary or [illegible] Instruction or for self instruction, Bussler's Practical Harmony is unequalled. It makes the study of harmony easy, rapid and entertaining.

Cloth Binding. Price, $1.00.

DICTIONARY OF MUSICAL TERMS

100 Pages. **By STAINER and BARRETT.** **6 x 9 Ins.**

Compressed from the Imperial 8vo Edition, by K. M. ROSS.

We take pleasure in presenting a compressed edition of Stainer and Barrett's valuable work. Mr. K. M. Ross, in his preface, says: "In reducing this book from the author's larger work, we have endeavored to omit only such terms as are not in general use, but have been compelled to eliminate an amount of details, in order to keep within reasonable limits. To the general public it is hoped that this edition will be found of practical utility."

"Dictionary of Musical Terms" is a neat and attractive book. It is offered at a nominal price with the hope that it may prove of incalculable value to those in need of a handy reference book.

Paper Binding. Price, 25 Cents.

BURROWES' PIANOFORTE PRIMER

Latest Improved Edition

Revised and Modernized by THOS. A'BECKET.

The fundamental principles which have given the work a world-wide reputation were not disturbed in the revision, but as the method of instruction has improved more rapidly than any other portion of the musical art, the sole aim of the editor was directed to bringing it up to the requirements of a progressive age.

There are other editions of this work—a number of them—but none are equal to the Latest Improved Edition, although all are sold at the same price.

Half Cloth Binding. Price, 25 Cents.

JOUSSE'S MUSICAL CATECHISM

Latest Improved Edition

Revised and Modernized by THOS. A'BECKET.

No one questions the merit of Jousse's Catechism—it is a universal favorite; but the progressive teacher demands text books and studies of the most advanced character. He is not satisfied with original editions, but wants the latest and best ideas. The possession of up-to-date editions saves time and insures more rapid and more substantial progress.

There are other editions of this work—a number of them—but none are equal to the Latest Improved Edition, although all are sold at the same price.

Paper Binding. Price, 20 Cents. Half Cloth Binding. Price, 30 Cents.

THE HARMONIZING OF MELODIES

A Text Book for Students and Teachers

By HENRY C. BANISTER.

The harmonizing of melodies, generally termed the knowledge of harmony, is one of the most practical applications of the knowledge of chords and their treatment. One may know the meaning of a number of words and still be unable to construct a sentence; he who lacks the ability to use chords in harmonizing a melody is in a similar position.

"Harmonizing of Melodies" will prove a most helpful aid to the student of harmony. It is extremely practical and abounds in examples which will readily be understood. No point has been overlooked, and all important subjects are treated at considerable length. Various methods of handling the same melody are shown, and valuable information as to the best choice, with reasons for the selection, are given. Many excellent hints as to taste and ornamentation, culled from the experience of the writer, are included.

Paper Binding. Price, 50 Cents.

WICHTL'S YOUNG VIOLINIST

A new and magnificent edition of Wichtl's celebrated violin school, including the original 100 progressive exercises in the first position, through all intervals and keys, with a second violin part for the teacher, to which we have added "Pleyel's Celebrated Duets for Two Violins"—carefully fingered and bowed—and a splendid collection of Popular Duets for Violin and Piano.

Without exception ours is the best edition of this standard work. Compare it with others.

Half Cloth Binding. Price, $1.25.

Thirty Standard and Popular Operas

ARRANGED FOR VIOLIN AND PIANO

Violin and Piano, 200 Pages. **By A. S. BOWMAN.** **Violin, 64 Pages.**

In this superb collection the compiler has displayed taste of the most eclectic character, his selections comprising the various "schools" of music—French, German, Italian and English. In one compact volume, grand opera, opera *comique* and opera bouffe have contributed their choicest melodies. The list includes the great operatic successes of a generation ago and passes, in continuous order, to those of the present day: we have Rossini, Donizetti, Verdi, Wagner, Bizet and Mascagni, in close relation. In the arrangement that happy medium has been reached which presents just enough difficulty to interest the player without proving troublesome or overtaxing the powers of the average performer. Without exception, it is the most useful and entertaining work of its character in print.

"Thirty Standard and Popular Operas," for Violin and Piano, is a handsome volume of 200 pages, bound in half cloth. The same, for Violin, contains 64 pages and is neatly bound in paper. Both are printed from new plates, on a fine quality of music-book paper. No expense has been spared to make them perfect in every respect.

Violin and Piano, One Volume, Half Cloth Binding. Price, $1.25. Violin Alone, Paper Binding. Price, 75 Cents. Both Books, if ordered at the same time, $1.50.

POPULAR SELECTIONS FOR MANDOLIN AND PIANO

By JOHN J. EBERHARDT.

Mr. Eberhardt, well known as a composer and arranger of music for the mandolin, and for mandolin clubs, is also leader of one of the most popular clubs in the United States. We have, therefore, no hesitation in recommending anything that he may offer in this particular line.

"Popular Selections" is a large book (9½ x 12 inches) of 128 pages, printed from engraved plates, on fine quality toned music-book paper; it has an attractive cover.

Paper Binding. Price, 50 Cents. If Sent by Mail, 11 Cents Additional.

Sieber's 36 Elementary Vocalises

Op. 92-97 Inclusive

FOR SOPRANO, MEZZO SOPRANO, ALTO, TENOR, BARITONE AND BASS

With Introductory Notes by FREDERIC W. ROOT.

Sieber's 36 Eight Measure Vocalises, for all voices, are well known and appreciated by teachers. The composer had a double object in view and prepared them for use in the school, as well as for self-study at home. The book for each voice differs from the companion volumes, as the exercises were written with especial regard for the voice part under consideration. Each study is contained within eight bars—therefore do not become tedious—and are written with the *sol fa* syllables, also with an ingenious and effective set of vowel sounds designed by the composer, who is a teacher of European celebrity. All of his studies are melodious and interesting.

Our new edition is, in every respect, the finest in print. These studies have, heretofore, been published only in sheet music form, at $1 50 each. While our new edition is of much more convenient size and much handsomer in every way, it is sold for 50 cents per copy.

Mr. Frederic W. Root says: "The new edition of Sieber's Exercises are beautifully gotten out and I hope will be properly appreciated. I congratulate you upon the edition and hope to use it in my teaching for many a year."

Paper Binding. Price, 50c. Each.

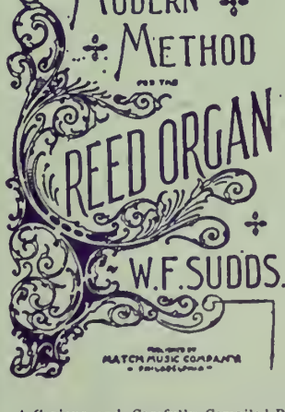
Modern Method for the Reed Organ



Embracing the Latest and Most Approved Systems Conducive to Rapid Progress and Artistic Interpretation.

By W. F. SUDDS.

As the title implies, this method is modern. It treats all subjects in a terse and effective manner.

Among the many excellent features of the Modern Method, we direct attention to the following:

It begins with Dictated Lessons.

The Rudiments are explained with remarkable clearness.

It is Carefully Graded.

It is sure to Awaken the Musical Instincts of the pupil without smothering the soul with too much drudgery.

It contains a complete treatise on registration as applied to the modern Reed Organ; also full information and comparison in the matter of Stop Nomenclature.

It is the only work of the kind treating the subject of Adapting Piano Music to the Reed Organ.

Every variety of Touch is clearly set forth accompanied by Illustrations showing the movements of finger, hand and arm.

The Scales are introduced in an effective manner.

The Explanation of the Minor Mode is such that it can be readily understood.

The Musical Illustrations attending the various principles are taken from the best composers of whom short sketches are given.

The aim is to teach and illustrate one thing at a time. By a judicious contrast of subjects, weariness is avoided.

Four Hand Pieces are introduced to promote steadiness and inspire confidence in the pupil.

A Copious and Carefully Compiled Pronouncing Dictionary is included.

It is a work that cannot fail to interest both the practical teacher and the earnest pupil.

Modern Method is a book of 141 pages (10 x 13 inches), printed from entirely new plates and on the best grade of music book paper.

Half Cloth Binding. Price, $1.00.

The Only Method of Piano Instruction

ILLUSTRATED BY AMERICA'S MOST DISTINGUISHED TEACHERS AND PIANISTS.

A Practical, Comprehensive and Thoroughly Graded Course.

THE NEW GRADUS AD PARNASSUM

Embodying the Latest and Best Ideas in Pedagogy.

GRADE 1.

The Corner Stone of the Course.

Table Exercises; Instructions from the Very Beginning, Most Carefully Graded; Difficulties Introduced in Logical Order; Interesting Exercises and Etudes; No Octaves; Exercises for Free Wrist; Major Scales—*Written*, but *not* Played.

GRADE 2.

Introduction of Scale Playing; Exercises for Passing Under the Thumb; Minor Scales Written; Beginning of Arpeggio Work (Broken Chords); Major and Minor Chords Awakening of the Ideal of the Singing Touch; Interesting Etudes; Careful Grading of Difficulties.

The Preparatory Gymnastic Exercises, in Grade 1, are Practical and Helpful.

GRADE 3.

Velocity Assumes Some Importance; Attention Given to the Staccato, while Cantabile Playing Is Carried Aloug with Equal Care; Etudes Become More Like Pieces; Polyphonic Playing Introduced; Exercises for Weak Fingers in Each Hand.

GRADE 4.

Polyphonic Playing Carried Forward; Rhythmical Problems (Two Against Three) Introduced; Greater Richness in the Etudes; Etudes for Melody Playing, Rapid Runs, Trills, Arpeggi, Marked Rhythms, Extreme Agility, Fourth and Fifth Fingers Interest Maintained Throughout the Grade.

GRADE 5.

Musical Material of Great Beauty; Etudes for Left Hand, Octaves. Polyphonic Playing, Staccato, Double Notes, Grand Arpeggi, Fourth and Fifth Fingers. In Singing Tone, Touch, Velocity and General Intelligence, Much More is Demanded of the Pupil.

GRADE 6.

Etudes for Extended Finger Touches, Staccato, Doubl Notes, Extreme Rapidity in Staccato and Runs; More Attention Given to Octaves; Pupil's Task Steadily Increasing in Difficulty—Greater Requirements in Regard to Touch, Interpretation, Color and Phrasing.

GRADE 7.

Pieces and Etudes by Saint-Saëns, Henselt, Kullak, Chopin, Mendelssohn, Raff, Alkan and others. These, Making Greater Demands upon the Pupil, advance his Technical Skill to the Highest Efficiency and Insure Ability to Interpret the Greatest Works for the Piano.

WILLIAM H. SHERWOOD.

Several Opinions.

WILLIAM H. SHERWOOD: I am happy to state that the "National Graded Course" is remarkably adapted to the needs of teachers and students of music. Your claim in regard to the excellent grading of the studies is a thoroughly just one. I do not think that I have ever seen as good a succession of topics and exercises arranged as they are from the beginning on, using the best kind of materials from all sources and without any superfluous pages.

WILSON G. SMITH: I have been particularly impressed with the practical value and uniform excellence of the "National Graded Course."

AD. M. FOERSTER: The "National Graded Course" is destined to hold a foremost position among the works of its class. I do not know of a better work, one containing a more interesting and valuable selection of studies and pieces for the various peculiarities to be mastered. A list of desirable pieces that may be added to each part, if found necessary, is given in each grade, also definitions of all musical terms used in this work. The work is bound to find favor with thoughtful teachers and students.

O. R. SKINNER: I like the "National Graded Course" much better than any other work I am familiar with. The editing seems to be thoroughly well done, and the priut leavcs nothing to he desired.

(Want of space alone prevents printing the opiuions of hundreds of well-known teachers in all sections of the United States and Canada.)

It Will Help YOU in Your Teaching.

Because

- It embodies the work of the most eminent pianists and teachers in America.
- It can be readily adapted to your "method," no matter what that may be.
- It is the LATEST work of the kind.
- ALL of the studies are carefully annotated, fingered and edited.
- It is the most carefully graded of any course before the public.
- It begins at the beginning of study.
- It saves the time that otherwise would be spent in laborious and often unrewarded search after that which is good and up-to-date.
- It covers the entire field of piano literature in an eminently practical, interesting and stimulating manner.
- Hundreds of your fellow teachers from all parts of the country have sent us, unsolicited, enthusiastic commendations of these very features.

This complete work (7 grades) together with a specially prepared pamphlet entitled: "Hints for Obtaining the Best Results in Using the National Graded Course," will be sent upon request, subject to examination and approval—without any obligation to purchase.
